

# Instructions on 5 ways to delete applications on your computer in detail and simply

Removing applications on your computer is often simpler than installing them into your operating system. Let's explore 5 simple ways to delete them here.

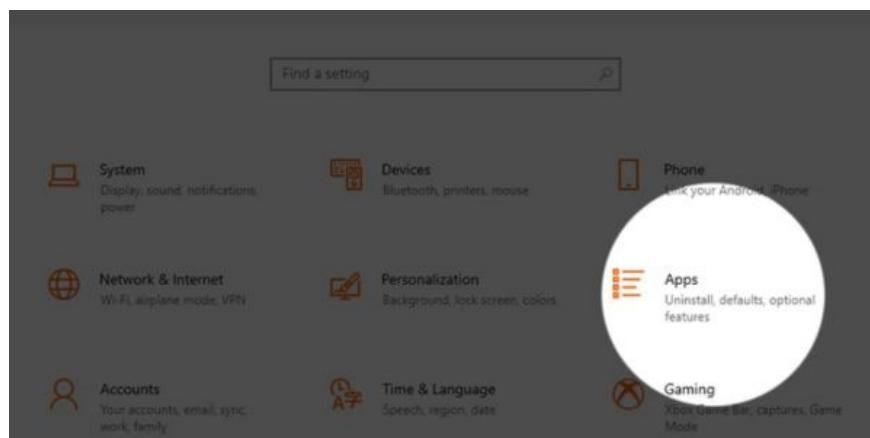

When using a **laptop** , most people want to remove unnecessary applications to free up space and optimize computer performance. **Deleting applications on a computer** is often easier than installing them into the operating system. In this article, TipsMake will guide you through 5 ways to delete applications on your computer in detail, simply and very effectively.

## Remove software on windows 10 with default tool

Regarding **how to remove applications on Windows 10 computers** using the default uninstall tool, you can conveniently use Settings on your computer to remove unused software. When you want to remove an application, follow these steps:

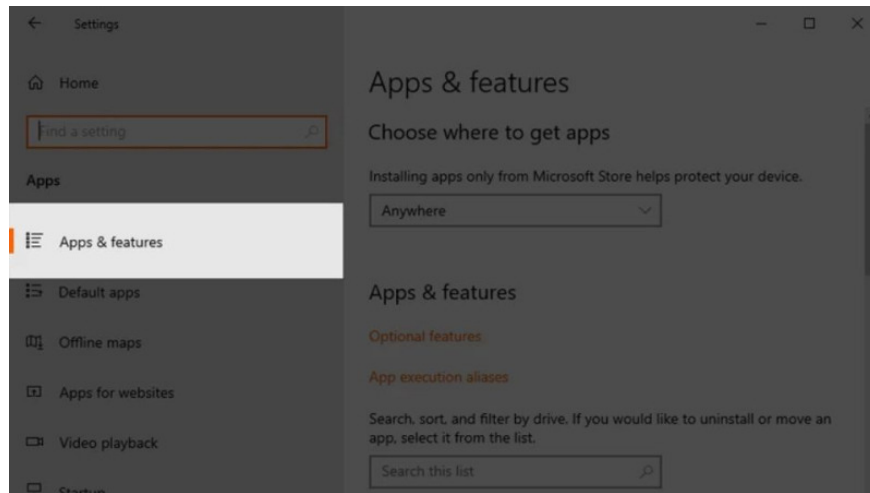

### Step 1: Open Apps

Using your keyboard, press the Windows + I key combination to open Settings. In the new window that appears, select "Apps" to access the list of applications on your computer.

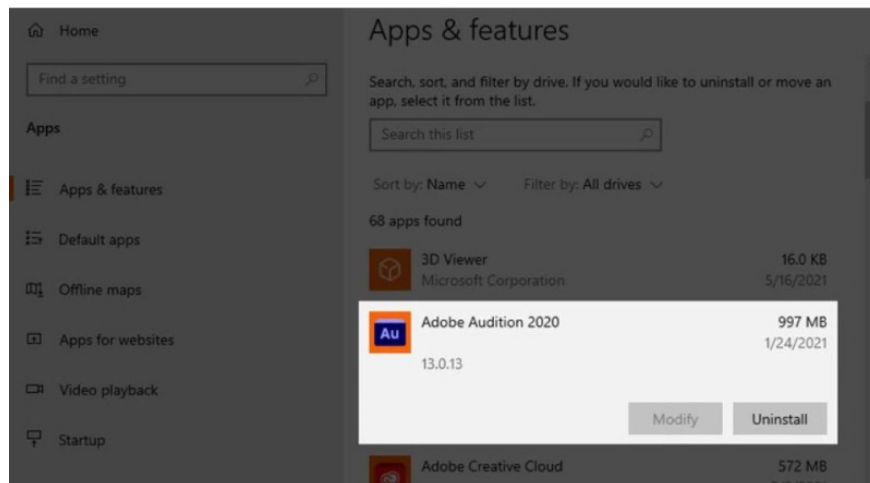

### Step 2: How to delete applications on computer

At the Apps interface, Click on "Apps & features" in the left column.

Windows will now display a list of all the applications installed on your computer. You can search for the application you want to uninstall by typing its name in the Search box or sort by name from A-Z, by size/capacity. Then, just click on the application you want to uninstall and select "Uninstall" and the removal process will be complete.

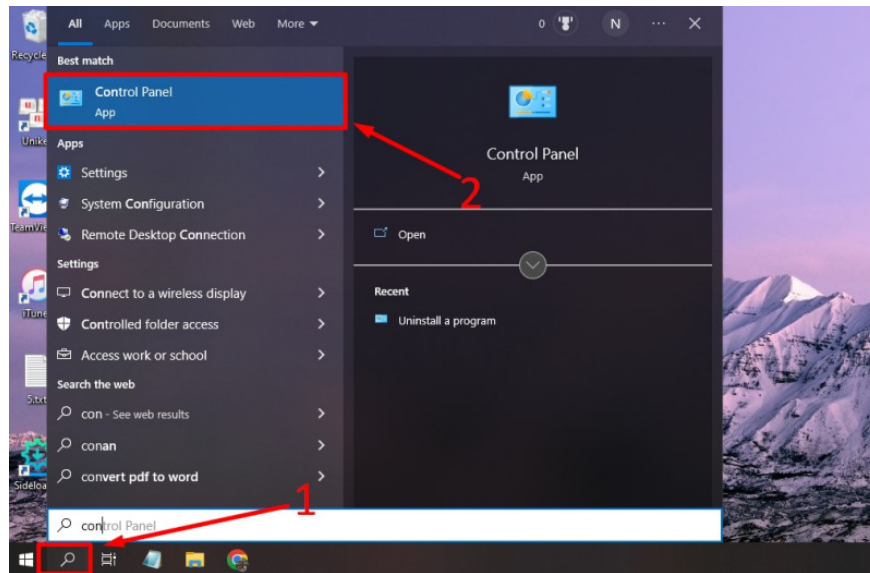

## How to delete an application on your computer using Control Panel

This is the most popular way to remove applications on Windows 11 computers that many people choose. By using this tool, you can easily manage your system, software and hardware. Below are detailed instructions on how to remove applications using Control Panel:

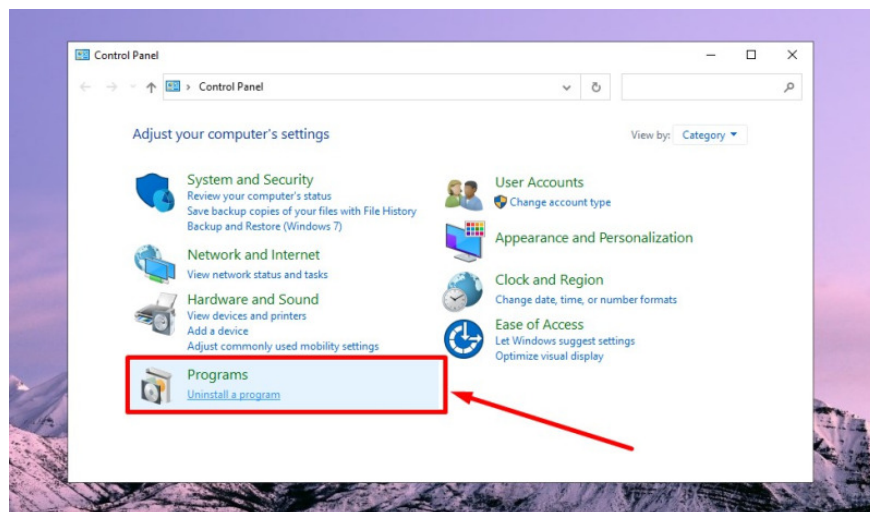

### Step 1: Open Control Panel

First, press the Windows icon on your keyboard to open the search bar. Then, type "Control Panel" and press Enter to open the Control Panel app.

## Step 2: Delete the application on your computer

Next, select "Uninstall a Program" (or "Programs and Features").

In the "Programs and Features" window, right-click the application you want to remove and select "Uninstall." This will complete the application removal process.

## How to permanently remove applications on your computer with Iobit Uninstaller

Iobit Uninstaller is a powerful tool that helps completely remove software on the computer, including removing all software files, different from **the way to delete applications on Windows 7 computers**. Below are detailed instructions on how to remove applications on **computers** in bulk using Iobit Uninstaller:

### Step 1: Install Iobit Uninstaller software

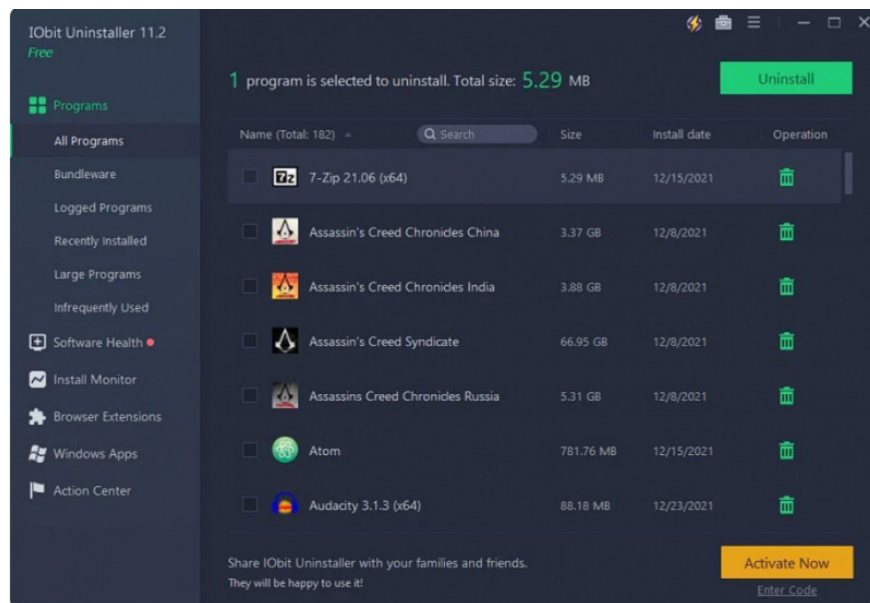

First, you need to download Iobit Uninstaller software from the website <https://www.iobit.com/en/advanceduninstaller.php>. Then, at the tool interface, click "Install" to start the installation process.

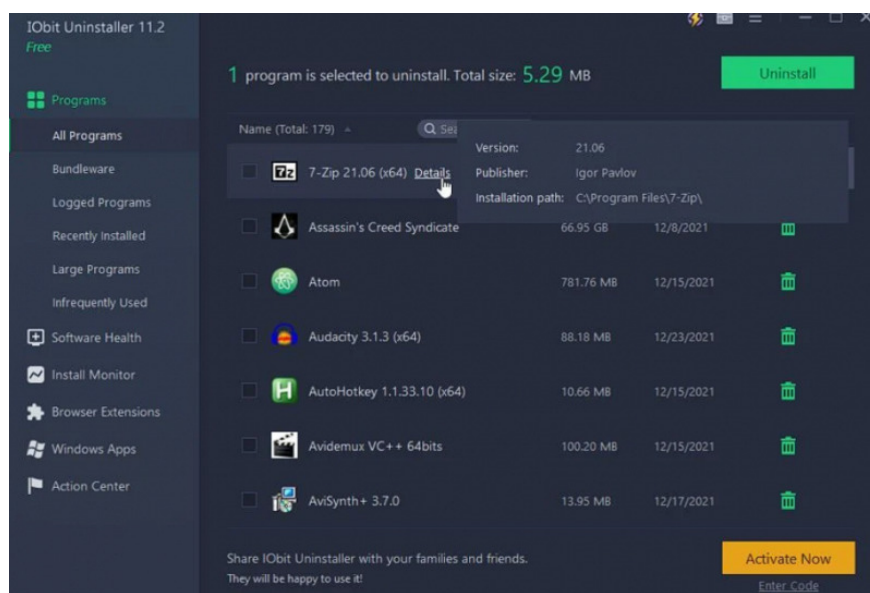

During the installation process, you may be asked to install additional software. If you do not want to install them, click "No, thanks", then click "Next" to continue.

### Step 2: Actions to remove the software

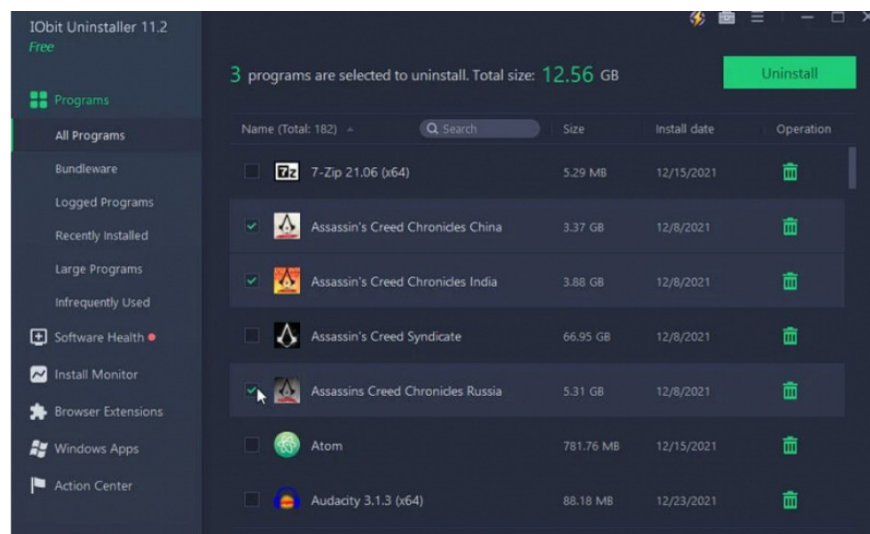

Once the installation is complete, you will see its main interface. Here, you will see a list of software installed on your computer. Each software will display basic information, including size and installation date.

When you hover over an installed software and click "Details", you will be able to see the detailed information and installation location of that software.

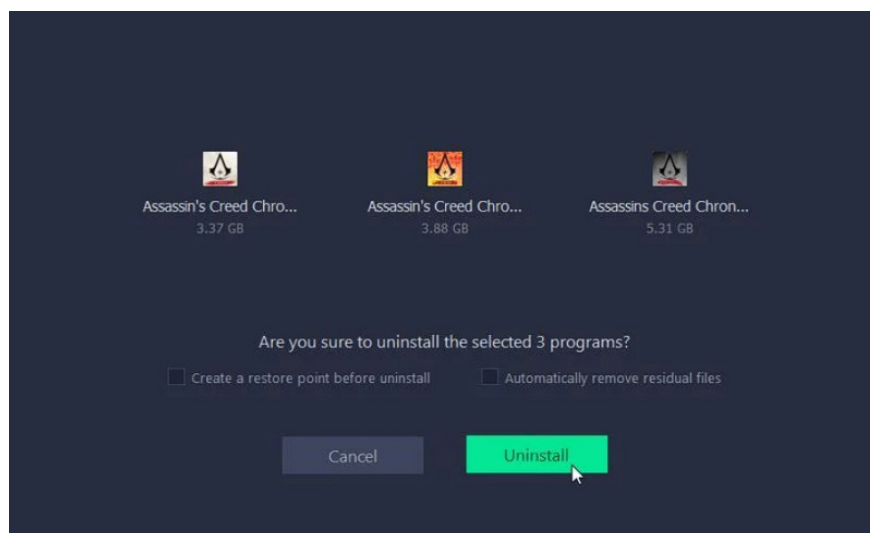

To uninstall software, select the software you want to remove and click "Uninstall" on the top right of the IObit Uninstaller window.

IObit Uninstaller will then display a list of programs that need to be uninstalled. You will see two options: "Create a restore point before uninstall" and "Automatically remove residual files".

1. If you use Restore Points, enable the corresponding option so you can restore if something goes wrong.
2. Don't choose the second option of automatically removing leftover files. Instead, double-check to make sure that important files aren't deleted.

Then, click "Uninstall" to start the software uninstallation process with IObit Uninstaller, which will be done right after that.

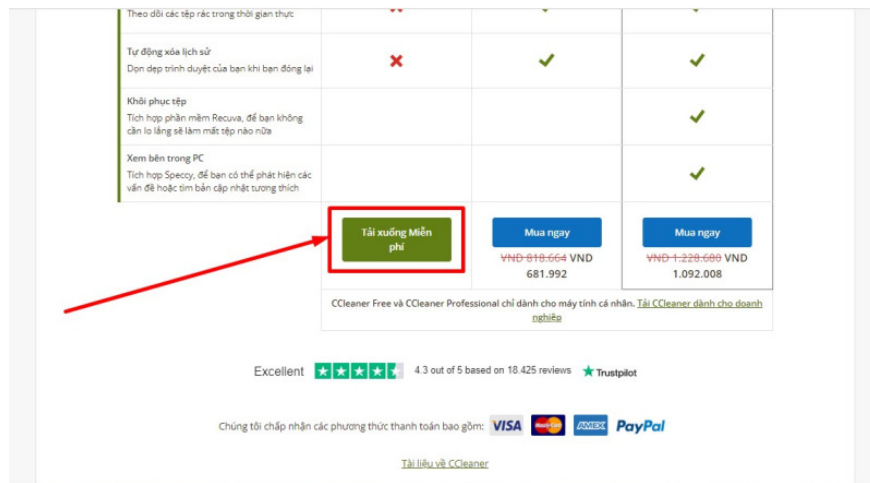

## How to delete applications on computer with Ccleaner software

CCleaner is an application developed by Piriform (now part of Avast), designed to clean and remove unnecessary files on your computer. Here are instructions on how to delete an application on your computer using CCleaner:

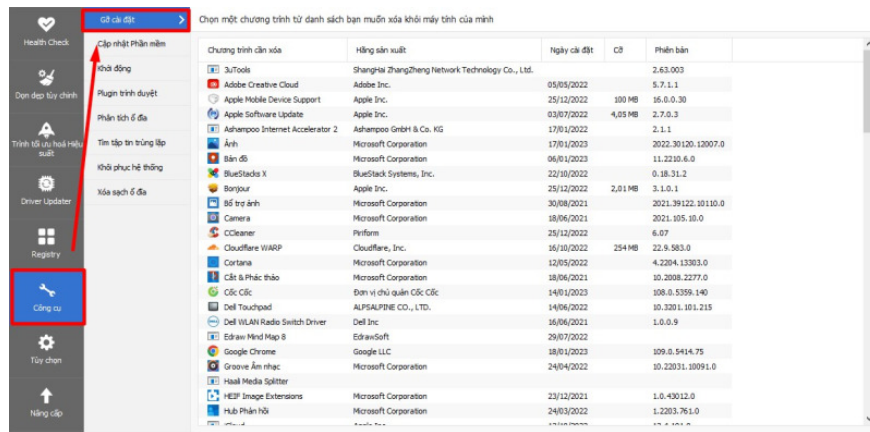

### Step 1: Install the application
