

Instructions on how to change border color in Excel

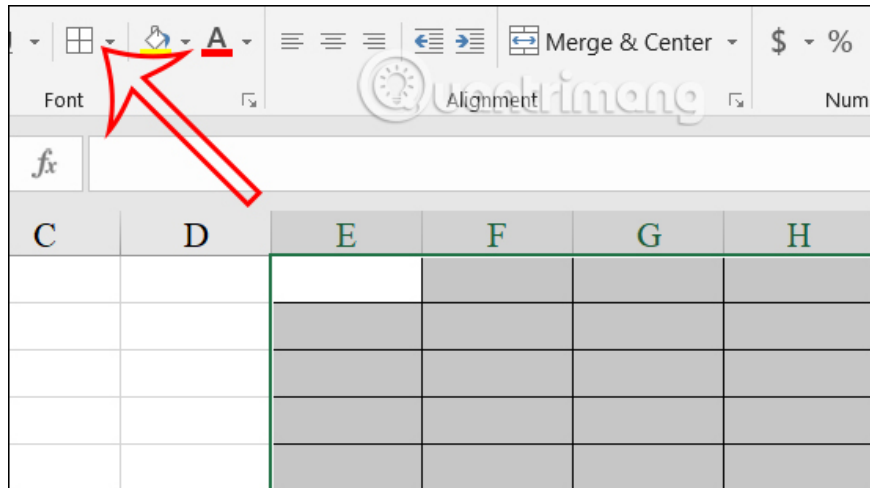

When you create a border in Excel, the default color of the border will be gray. However, you can also change the border color to the color you want.

The article below will guide you to change border color in Excel.

How to change Excel border color from the Ribbon bar

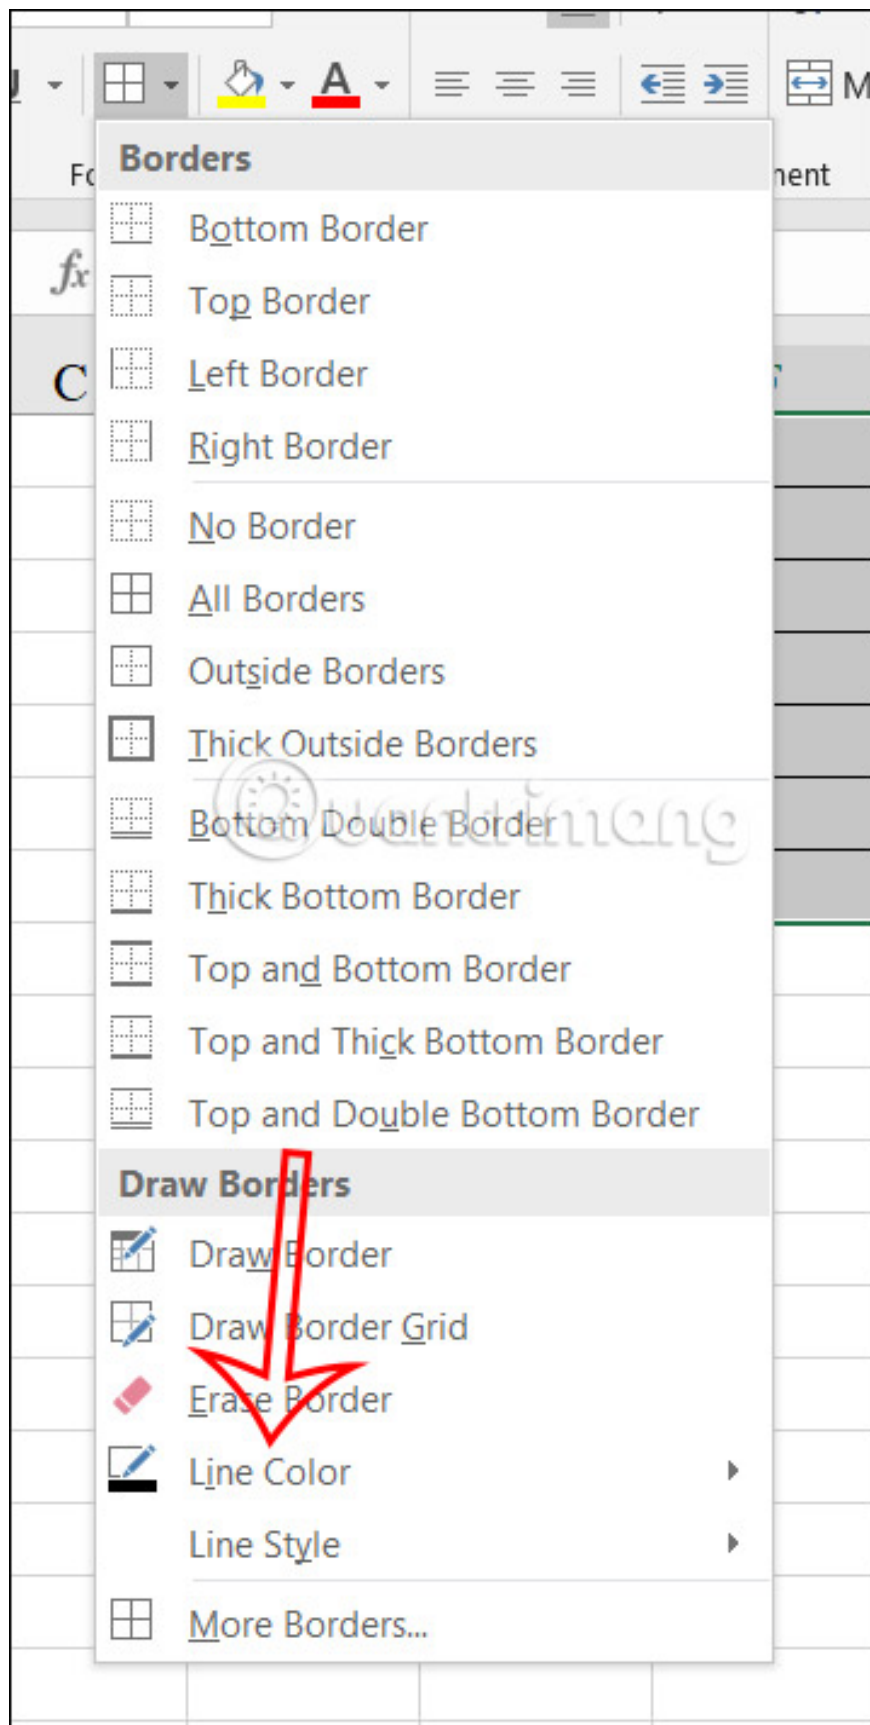

Step 1:

First, the user **blackens the border area that needs to change color**, then click on the **Borders item** on the Ribbon bar to adjust.

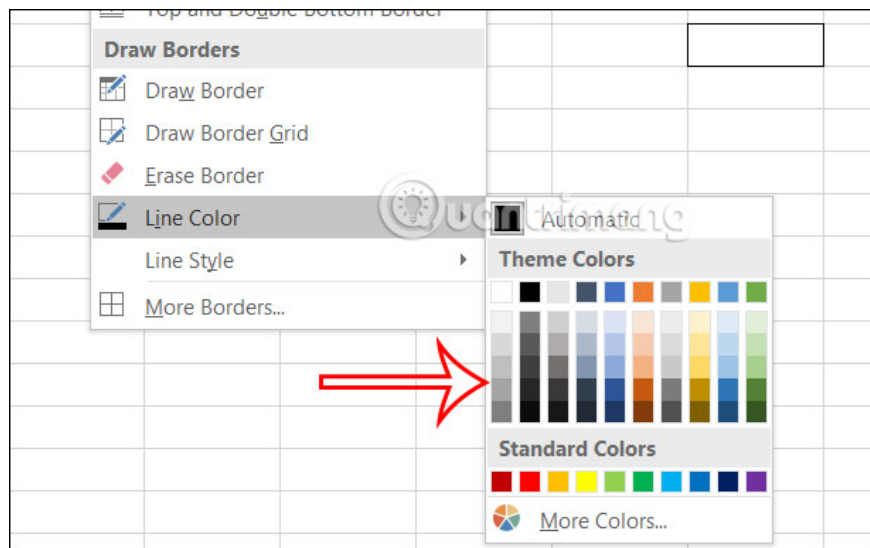

Step 2:

Displaying a list of options for table borders, users click on **Line Color** to adjust the color of the border.

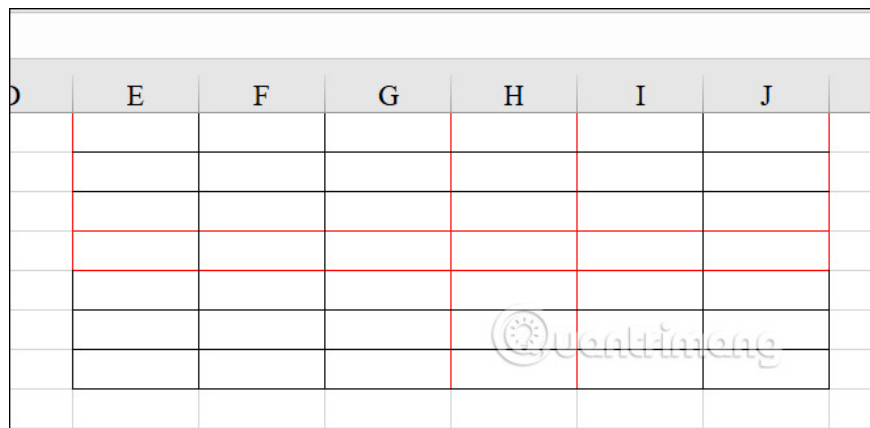

Then you see many different colors to choose from. We **click on the color** we want for the border.

Step 3:

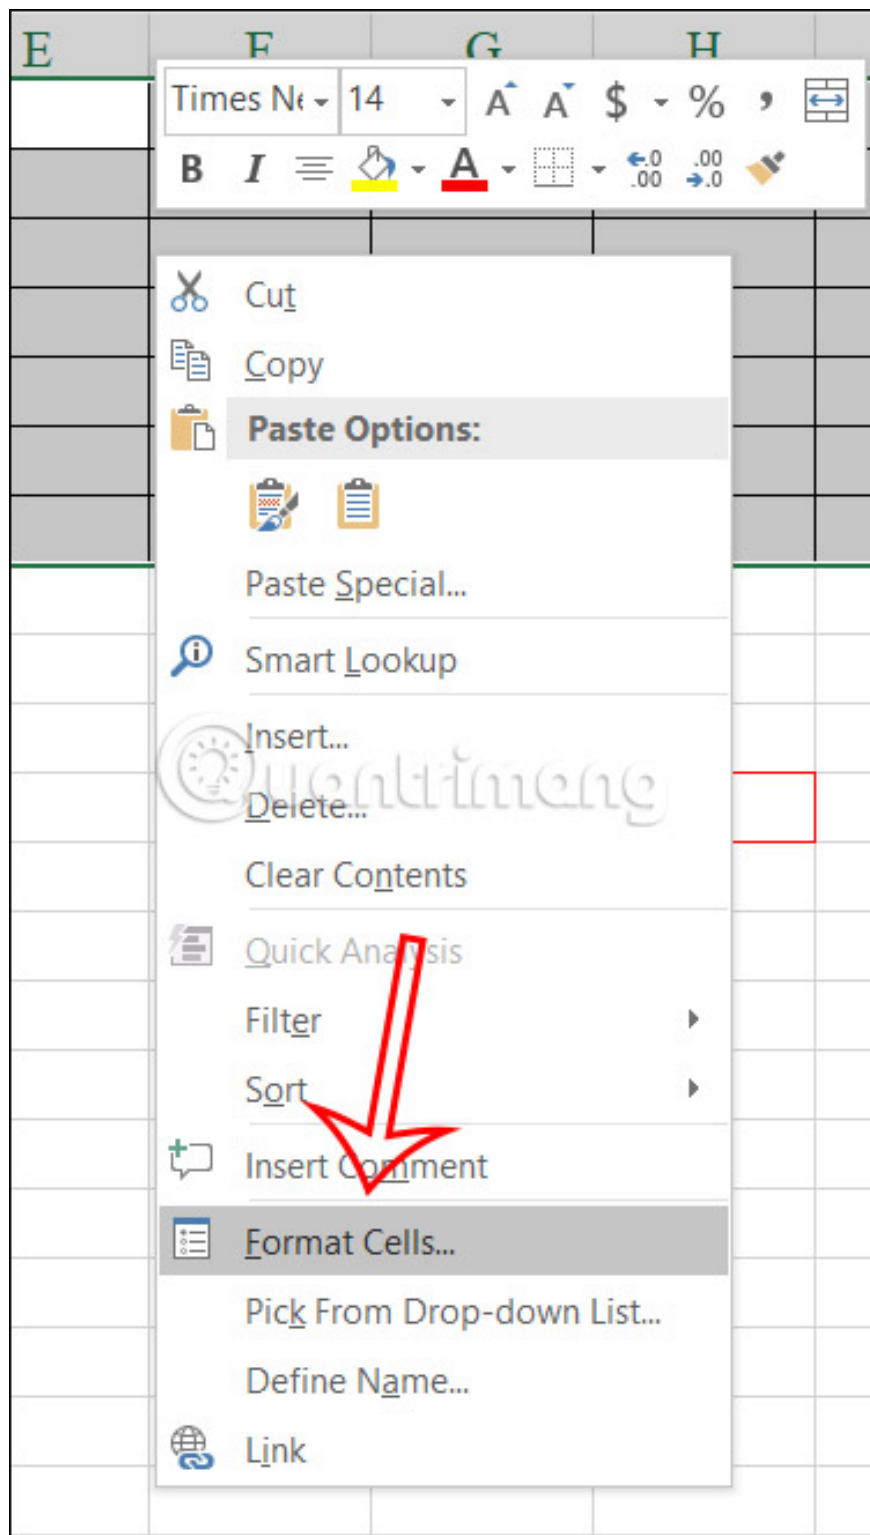

Now display the pen icon so we can color the border. Click on each border to change to the color we have chosen.

How to change border color in Excel using Format Cell

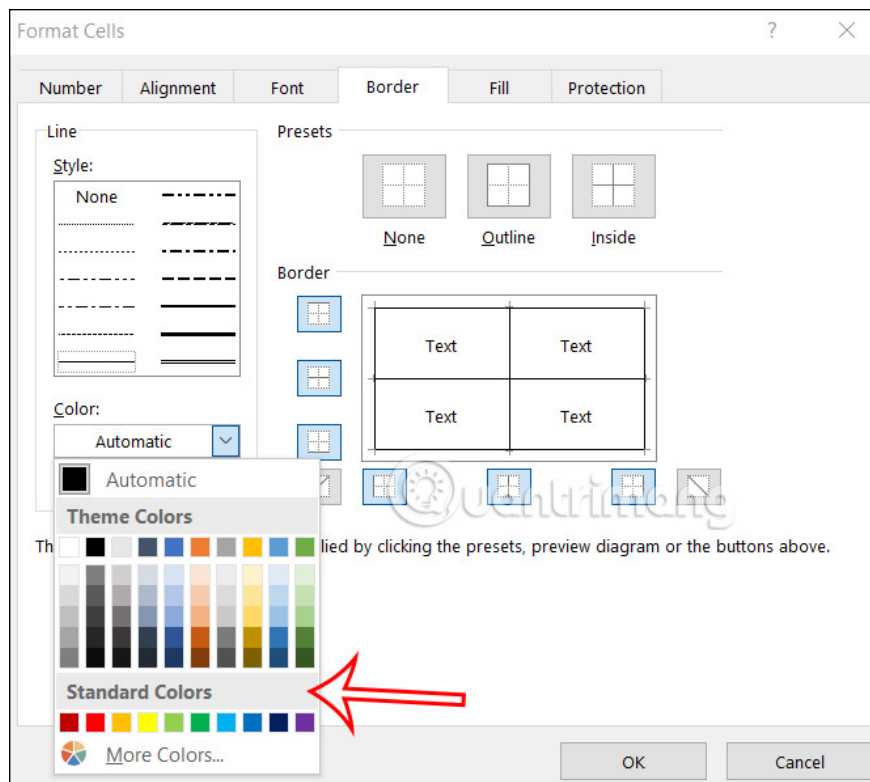

Step 1:

We also black out the table border that needs to change color, then **right-click on the table** and select **Format Cells** in the displayed list to adjust.

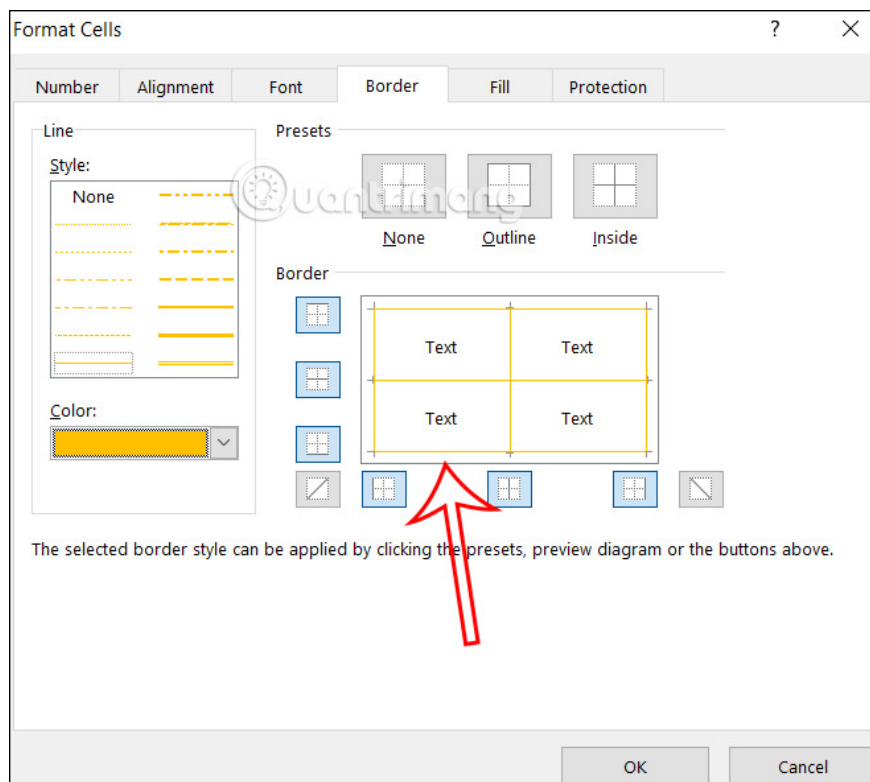

Step 2:

Switch to the new interface, click on **the Border tab** . Then you look down below **the Color section** and choose the color for the border.

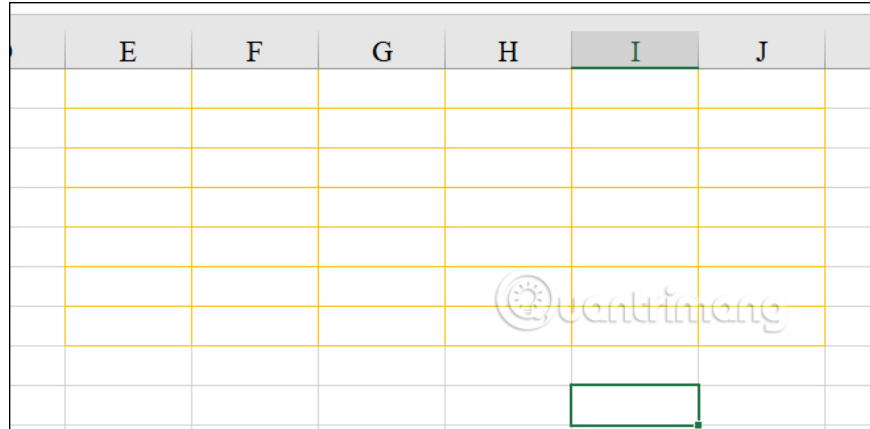

Step 3:

After choosing the color, click on each border to create a colored table border in Excel. You can create border colors with the lines we choose.

The resulting table has been created with a colored border as shown below.

The image shows an Excel spreadsheet with a grid of cells. The columns are labeled E, F, G, H, I, and J. The rows are numbered 1 through 10. A yellow border is applied to the range of cells from E1 to J6. A green border is applied to the cell I7. A watermark for 'Quantimeng' is visible in the center of the grid.
