

# Instructions on how to check website life

The following article will introduce and guide you how to check the time that a website is available on the Internet in a simple and specific way.

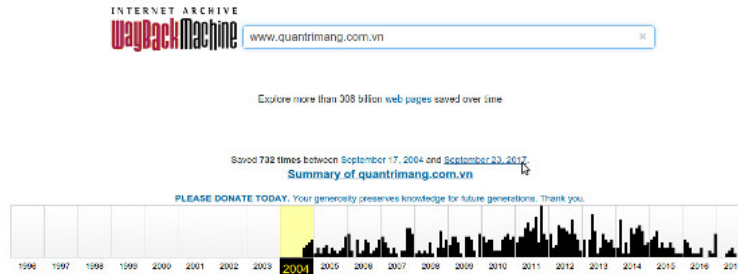

The age of the website (domain name) is an important factor in the fierce SEO race. Google will greatly appreciate websites that have a long life. So how do we check domain names? The following article will introduce and guide you how to check the time that a website is available on the Internet in a simple and specific way.

Login website: <http://web.archive.org>

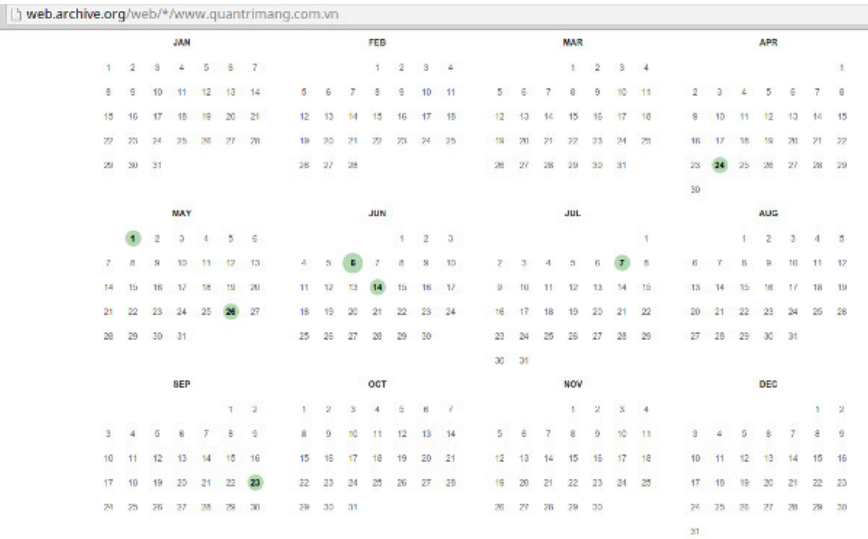

Enter your domain name in the line **Enter a URL or words related to a site's home page** and wait a moment.

The results appear, you can see when the domain name is posted on the Internet.

## To view the web activity history

Scroll down to see the calendar for months and days. Click on the date marked with a green circle to see the activity history of the website saved at that time.
