1. Instructions for installing and using Kodi on computers

How to clear cache on Kodi

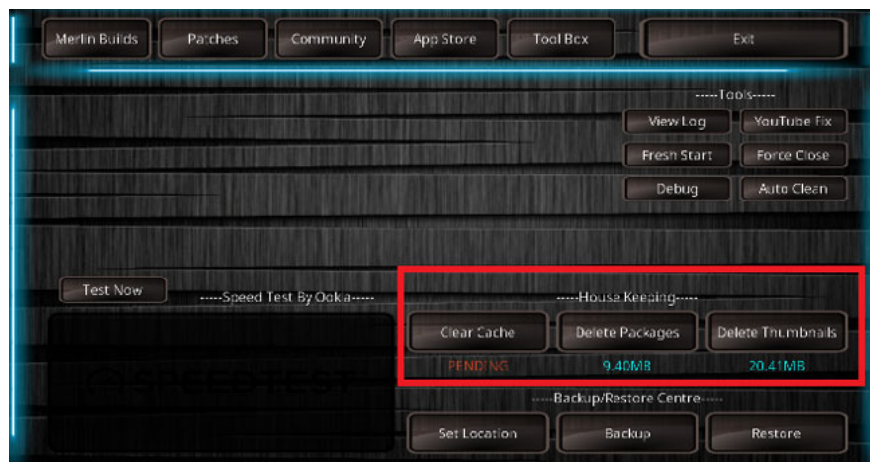

Note: This tutorial applies to Kodi version 17 (codename Krypton). Therefore, if you are running another Kodi version, the cache clearing method may be different.

Here, we will use the Merlin Wizard utility. Follow the steps below to clear the cache with the Merlin Wizard.

1. First, you need to open Kodi.
2. Go to **Settings> File Manager> Add Source> Add Source> None.**
3. Enter *http://srp.nu/* in the largest box on the screen and click **OK.**
4. Enter the source as **Superrepo** and press **Enter.**
5. Return to Kodi's main screen.

6. Visit the **Add-ons> Package Installer**.
7. On the next screen, navigate to **Install from Zip File> Superrepo**.
8. Visit **Krypton> Repositories> Superrepo**.
9. Select **superrepo.kodi.krypton.repositories.zip** from the list and wait for the Zip file to install.
10. On the next screen, access **Install from Repository> Superrepo Repositories> Add-on Repository> Superrepo All> Install**.
11. Return to the main screen and go to **Add-ons> Package Installer> Install from Repository> Superrepo All> Program add-ons> Merlin Wizard**.
12. Click **Launch Wizard**.
13. Select **Tool Box**.
14. In the bottom right corner of the Merlin Wizard, click **Clear Caches, Delete Packages** and **Delete Thumbnails**.

So you deleted Kodi cache.

Good luck!

Clear the cache and delete different Android application data
