

Instructions on creating ID photos from portrait photos using Copilot.

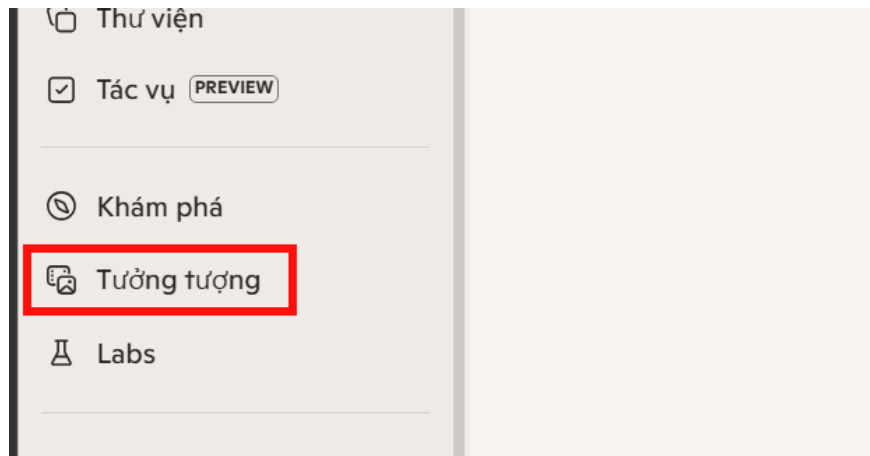

If you want to create a passport photo from a portrait but don't know the command, you can try the passport photo generator on Copilot.

If you want to create a passport photo from a portrait but don't know the commands, you can try the passport photo maker on Copilot. This tool not only helps you edit the background, transform your photo into a passport photo in any style, adjust lighting, but also optimizes your face to fit standards such as passport photos, job application photos, or student ID cards. In this article, you will be guided in detail on how to use the passport photo maker on Copilot.

How to create ID photos on Copilot

Step 1:

You access Copilot and then click on **the "Imagine" option** on the left side of the interface.

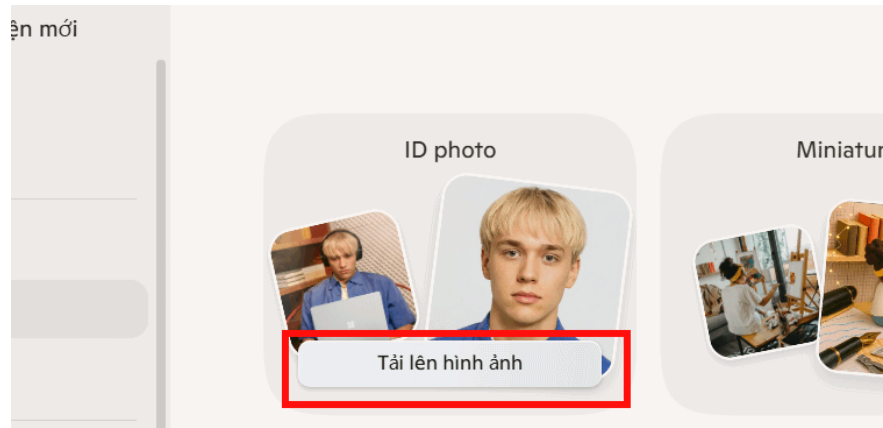

Next, on the new interface, **click on the ID photo tool** as shown below. Then, select **Upload image** to upload the image and convert it to a passport photo format.

Please note that to get a good photo, you need to ensure the following factors:

1. The original image is clear and not blurry.
2. Face looking straight ahead, not obscuring the face.

3. Good lighting, simple background.

Step 2:

Shortly after, you'll have your ID photo converted from your portrait. You can compare the uploaded photo and the converted ID photo below.

WANNA·ONE

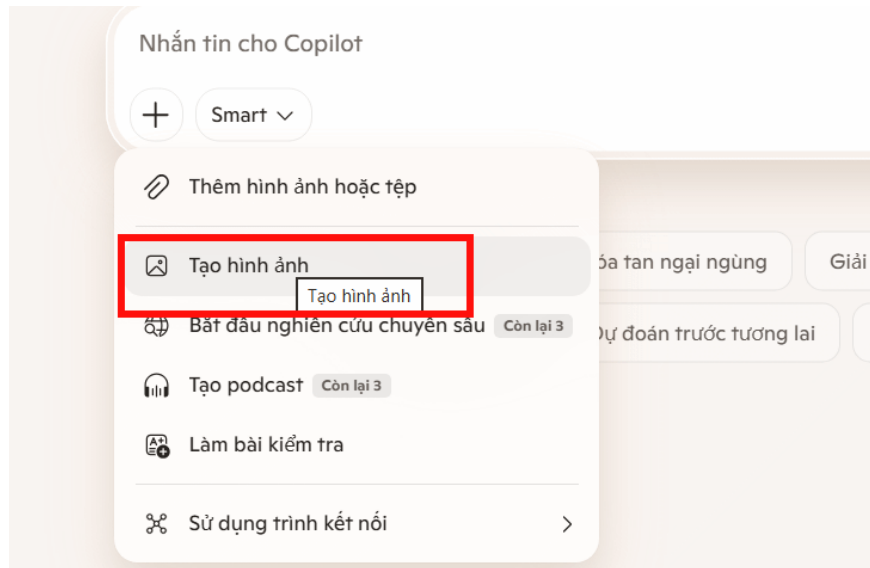

Step 3:

Alternatively, you can **use the Image Creation mode in Copilot** to convert a portrait photo into an ID photo.

Next, **upload your image** and enter the command below to **create a passport photo** .

Create a professional ID photo with a white background, neutral expression, balanced

You can change the photo style in the command to something else if you want, for example, to create a professional photo for a job application.

Create a professional headshot ID photo with a clean white background, soft natural

As a result, we get a passport photo like the one below.

Copilot's ID Photo feature is a convenient solution for creating professional ID photos in just minutes. With Microsoft Copilot, you don't need photo editing skills to get a high-quality photo, saving time and money. By using the prompt effectively and optimizing your input images, you can create high-quality photos for both academic and professional purposes.
