

Instructions on how to Deploy XAP file with WPV Xap Deployer

You should install the Visual Studio + Windows Phone 8.1 / Windows 10 Mobile SDK if your computer supports it. Alternatively, you can skip the loading step of SDKs if you have installed VS (visual studio).

You should install the Visual Studio + Windows Phone 8.1 / Windows 10 Mobile SDK if your computer supports it. Alternatively, you can skip the loading step of SDKs if you have installed VS (visual studio).

Note:

- This only applies to low profile computers such as x86 SO or small tablets.
- You should install the Visual Studio + Windows Phone 8.1 / Windows 10 Mobile SDK if your computer supports it. Alternatively, you can skip the loading step of SDKs if you have installed VS (visual studio).
- Make sure your computer has Net Framework 4.5.1 installed. If you have not installed Net Framework 4.5.1, you can download Net Framework 4.5.1 and install it here.

1. Prepare

1. Windows Phone SDK 8.0 Lite: Download and install here.
2. Windows Phone SDK 8.1 Lite: Download and install here.
3. WPV XAP Deployer Tool: Download and install here.

2. Steps to take

1. Unzip the files into folders.
2. Open the **WP8 SDK Tools Lite Setup Av1.0 folder** and run the file **InstallWP8SDKToolsLite.bat**.

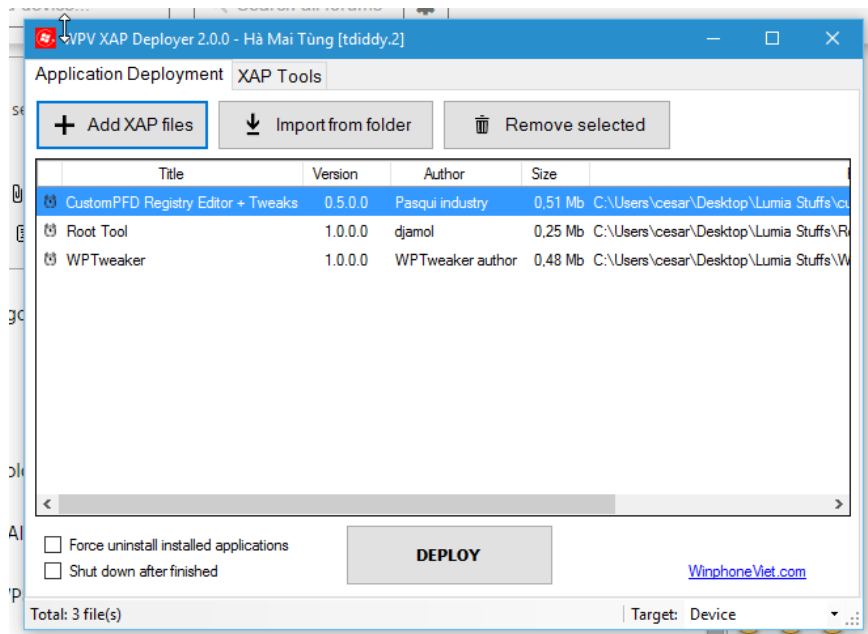

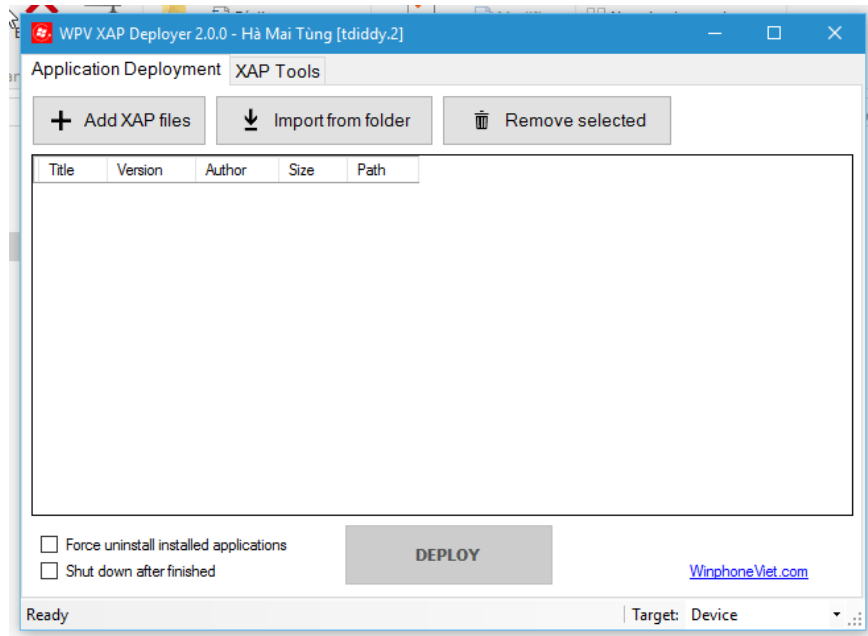

Note: Do not run the file under Admin.

3. When the CMD window appears on the screen, press **Enter**.

With all dialog boxes asking for confirmation, select **Yes**. After the process ends, press **Enter** again.

4. Do the same steps 2 and 3 with the **WP8.1 SDK folder Lite Setup Av1.00 Tools** and the file **InstallWP81SDKToolsLite.bat**.

5. Next open the **WPV XAP Deployer 2.0** folder and run **WPV XAP Deployer** . Click **Add Xap Files**. At this point, a dialog window appears, where you select the XAP file you want to deploy, then click **Deploy** and wait until the process is finished.

Note:

If using a Windows 10 Mobile device, ask your phone in **Developer Mode**.

If using Windows Phone 8.1 device, request your phone in **Unlocked Developer** mode .
