Share how to fix Excel line spacing errors quickly and easily

The error of Excel automatically changing cell width is not uncommon, it could be because you accidentally pressed the shortcut to adjust row width in Excel, for example. Therefore, you can apply methods to manually adjust cell width in Excel to adjust it according to your needs. Here are ways for you to do it.

1/ How to adjust column width in Excel using AutoFit

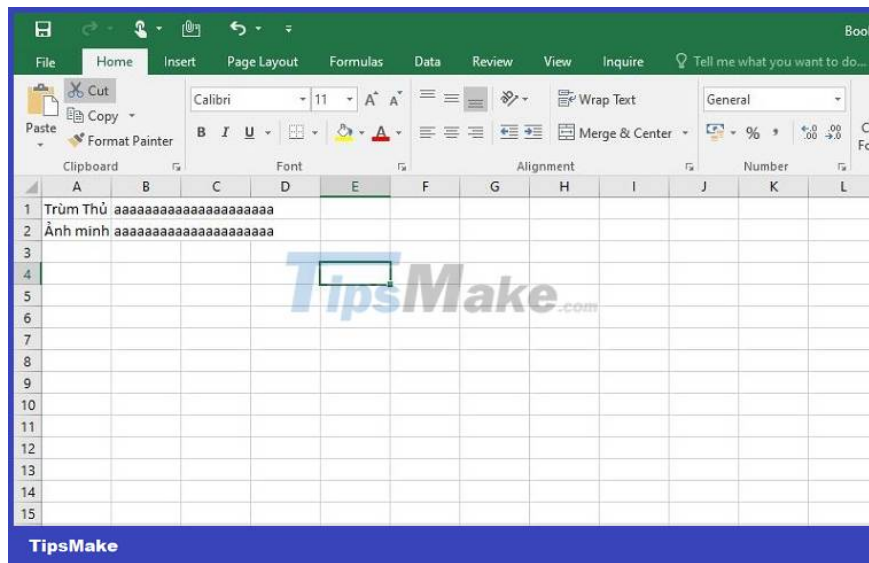

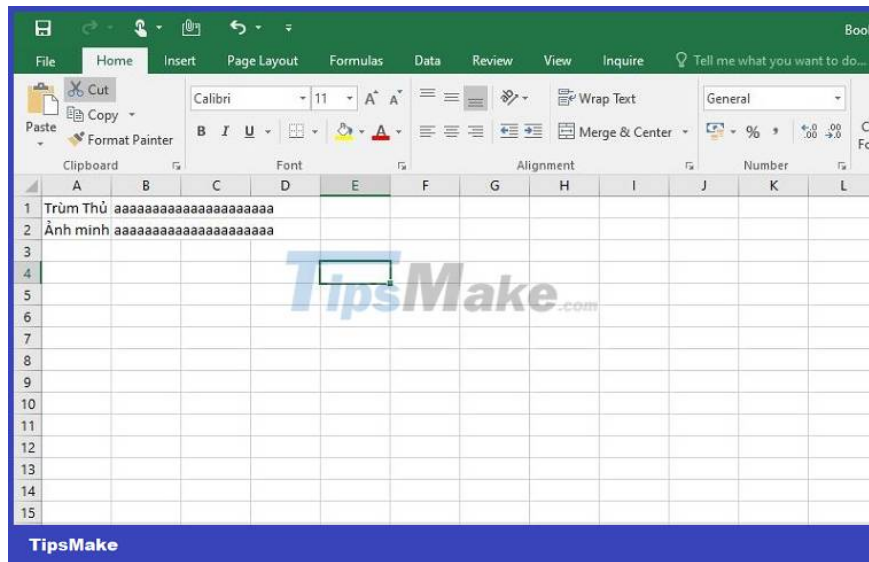

AutoFit is a feature that will help you automatically adjust the size of sheet cells to match the displayed data with the length corresponding to each content. In simpler terms, AutoFit will help adjust the width of columns to fit the content inside. More specifically, AutoFit will have 2 commands:

1. **AutoFit Column Width** : This mode will automatically change the width of columns to retain the largest value in that column.
2. **AutoFit Row Height** : This mode will automatically adjust the width of the columns to match the largest value in the row. Therefore, choosing this option will help expand rows vertically and you can save multiple lines of data or long paragraphs of text.

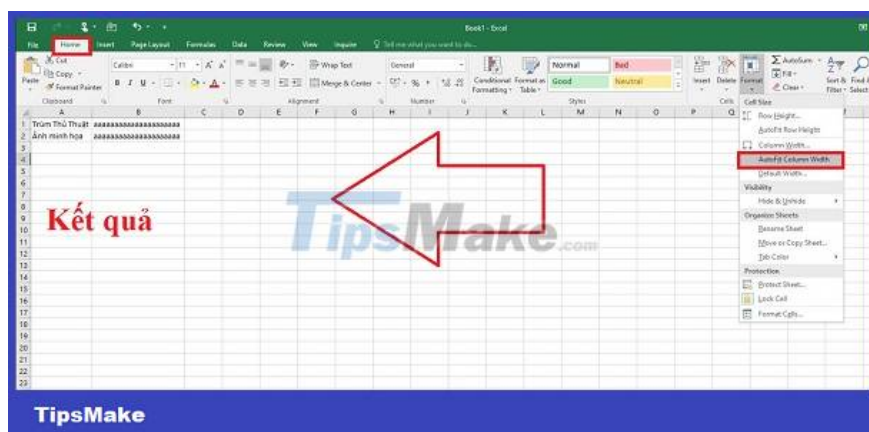

Here's how to do it so it's easier for you to understand

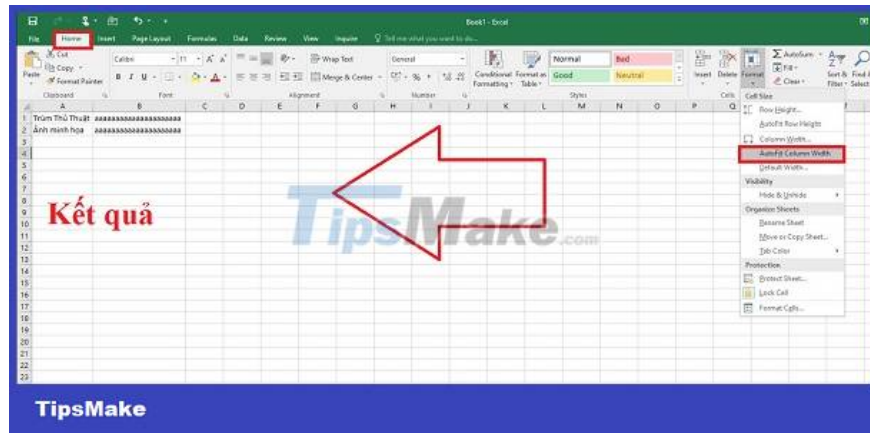

Instructions on how to automatically adjust column widths in Excel

For example, we have an Excel document (as shown) > The way to automatically stretch columns and not cover text is:

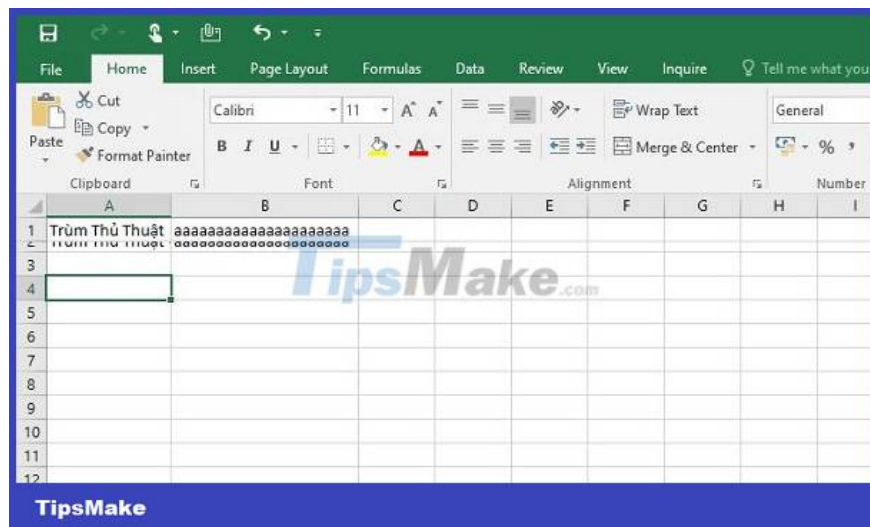

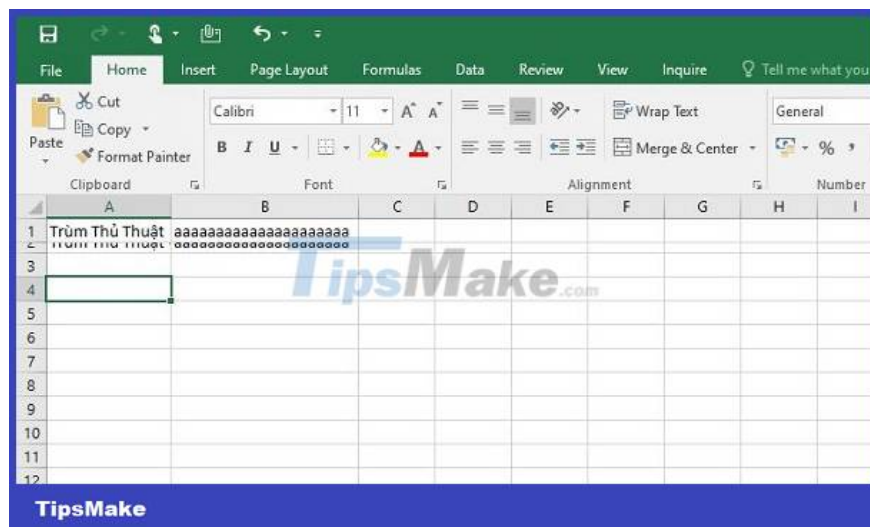

1. **Step 1** : Highlight all the columns you want to adjust the width of > Click the **Home** tab > Click the arrow mark of the **Format** line .
2. **Step 2** : When the list displays, click **AutoFit Column Width** > The result will be as shown below.

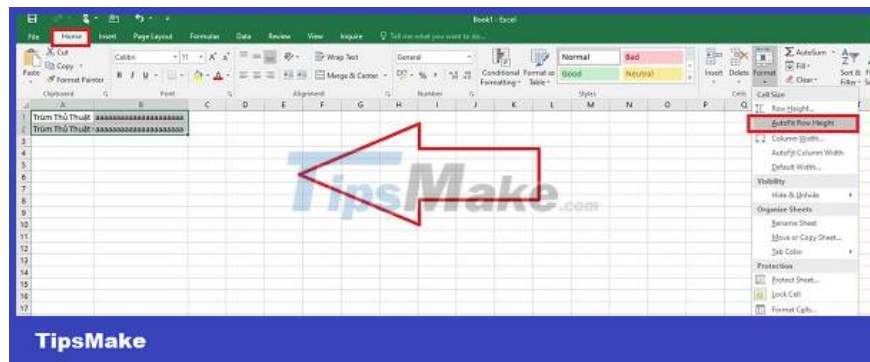

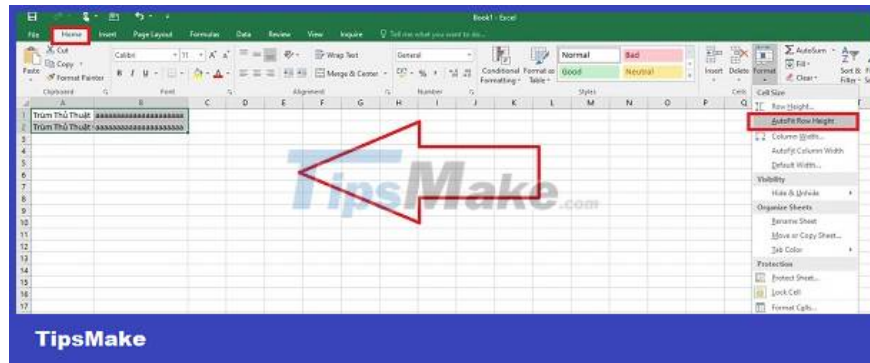

Instructions on how to automatically adjust row widths in Excel

For example, I have an Excel document with narrow rows as follows. The way to automatically stretch rows is:

1. *Step 1* : Highlight the rows you want to adjust > Click the **Home** tab > Click **Format** as instructed above.

2. **Step 2** : When the options appear, select **AutoFit Row Height** . The result will be like the photo.

Instructions on how to quickly align columns in Excel

If the number of rows or columns is not too many, you can quickly align by double clicking as follows:

1. *If you want to adjust a column > The user needs to place the mouse on the right border of the top title column > When you see a double-headed arrow appear, double click on the border and the column will automatically be adjusted. correction.*
2. *If you want to adjust a row > Move the mouse cursor over the bottom border of the row > At this time, you can also double-click on the border to automatically adjust accordingly.*
