

Instructions on how to install Mecury 2-antenna wifi booster

The wifi booster helps increase the strength of the wifi signal as well as the coverage of the space. The Mecury 2-antenna wifi booster with low price and good performance is the choice of many customers.

If you are experiencing problems with weak or unstable wifi signals in your home, then a wifi extender could be a great solution for you.

Introducing Mecury 2 antenna wifi booster

Mercury 2 Antenna wifi extender is one of the best products on the market today to solve the problem of weak and unstable wifi signal. With the feature of enhancing wifi signal and expanding coverage, Mercury 2 Antenna wifi extender will help you access the internet faster and more stably throughout your home.

Mercury 2 Antenna wifi extender has many advanced features such as QoS (Quality of Service) to improve network performance, or MAC address filtering to protect your network from intruders. With these features, the wifi extender will help you optimize your network performance and keep your wifi network safe.

In addition, the Mercury 2 Antenna wifi booster is also capable of enhancing the wifi signal to 300Mbps, with 2.4GHz band. This ensures that you will have faster and more stable internet access speed, even when you are using multiple devices at the same time.

In short, the Mercury 2 Antenna wifi extender is a great product to solve the problem of weak and unstable wifi signal in your home. It features wifi signal enhancement and coverage extension, is easy to install and use, and offers many advanced features to improve your network performance.

How to install Mercury 2 antenna wifi booster

Step 1: Plug the Mercury wifi booster into the power source.

Step 2: Use your phone to access a network called Mercury.

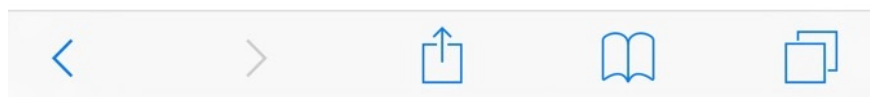

设置登录密码

请输入6-15位字符

请再输入一遍

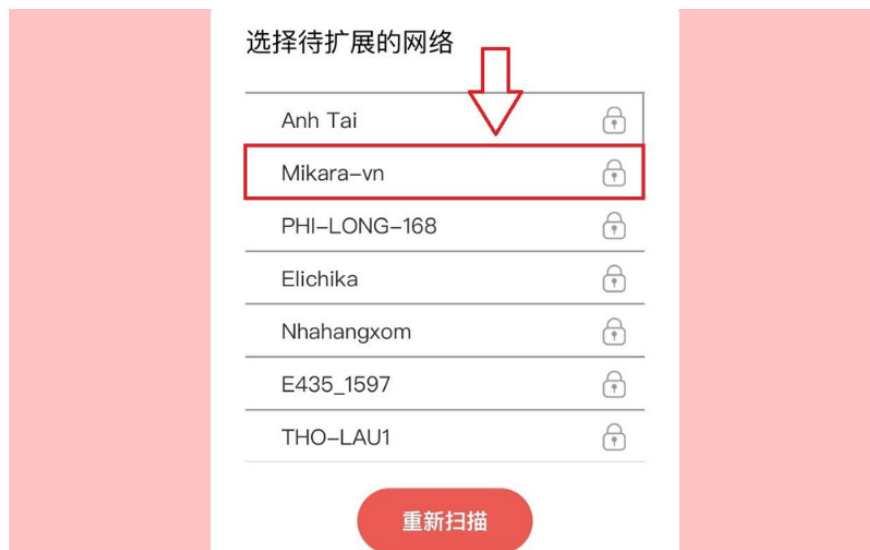

如忘记密码，需恢复出厂设置

Step 3: Set a password for the device (There are 2 lines where you enter the same password)

Step 4: After logging into the wifi booster, select the wifi name you want to extend the signal to (note that you only select your wifi or wifi whose password you know). You can change the name of the wifi that is being boosted for easy identification.
