

Instructions on how to install Windows 10 (32bit and 64bit) in the most detailed!

Detailed instructions on how to install Windows 10 with USB BOOT or install on a VMware virtual computer. The fastest way to install Win 10 saves you time ..

Actually, the way to install Windows 10 is very easy and it is completely similar to how to install Windows 8 or 8.1. If you have already installed this operating system, installing Windows 10 will not be difficult at all.

#first. What to prepare when installing Windows 10?

1. Windows 10 installer (* .iso file) /
2. A hard drive partition > 20GB to contain the Windows 10 installation
3. A DVD or USB to store the installation.

Minimum configuration required to install Windows 10

1. Processor: Minimum speed 1 GHz, with support for PAE, NX and SSE2
2. RAM capacity: 1 GB minimum (32-bit version) or 2 GB (64-bit version)
3. Minimum memory: 16 GB (for 32 bit version) or 20 GB (for 64 bit version)
4. Graphics card: Microsoft DirectX 9 with WDDM driver

#2. Start installing Windows 10

I talk a bit about the priority even though I have given the guide link in the preparation section (see section 4 above). First you put the CD / DVD into the drive or plug in the Windows 10 installation USB .

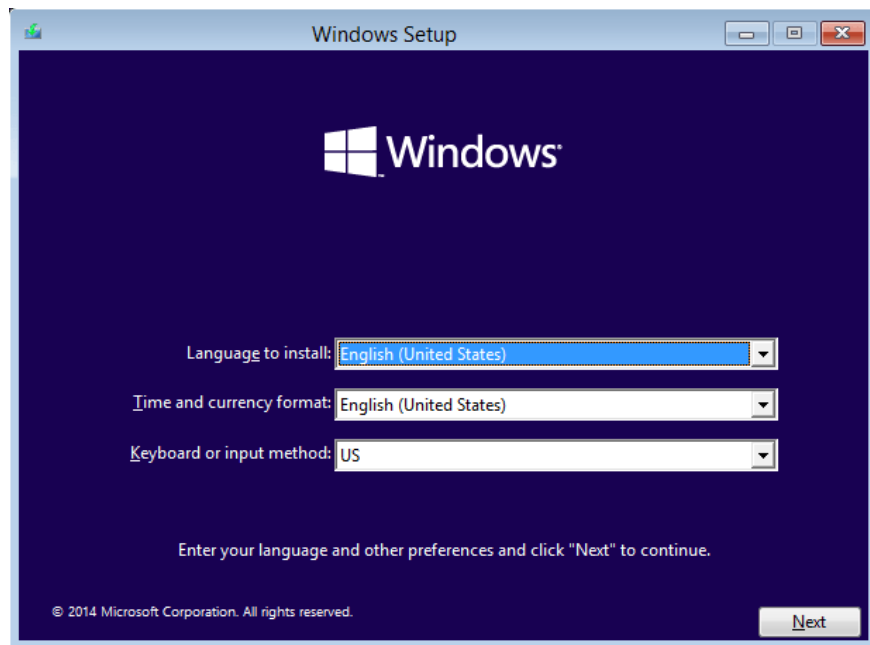

. Then restart the computer, then access the BIOS by pressing the DEL, F8, F10 keys quickly or access the fast boot mode like this:

+ Step 1: At the first interface, choose the language, time format .

1. Language to install: Select computer language
2. Time and currency format: The time format.
3. Keyboard and input method: Select keyboard input method.

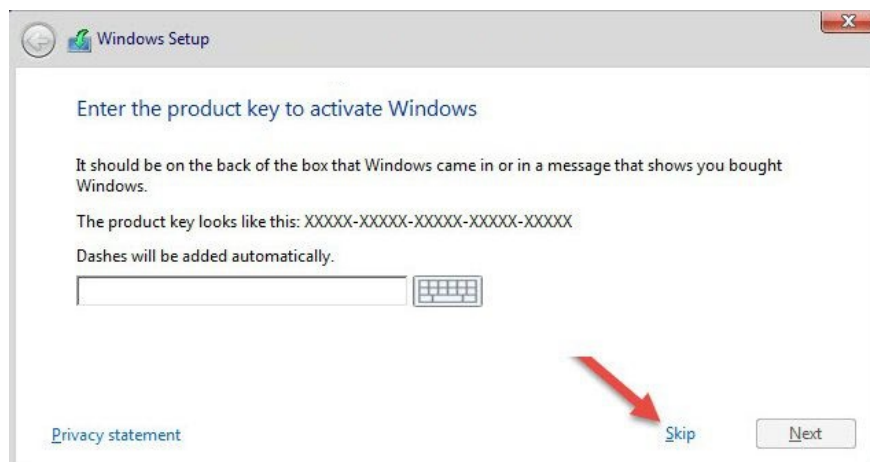

Then click Next to continue.

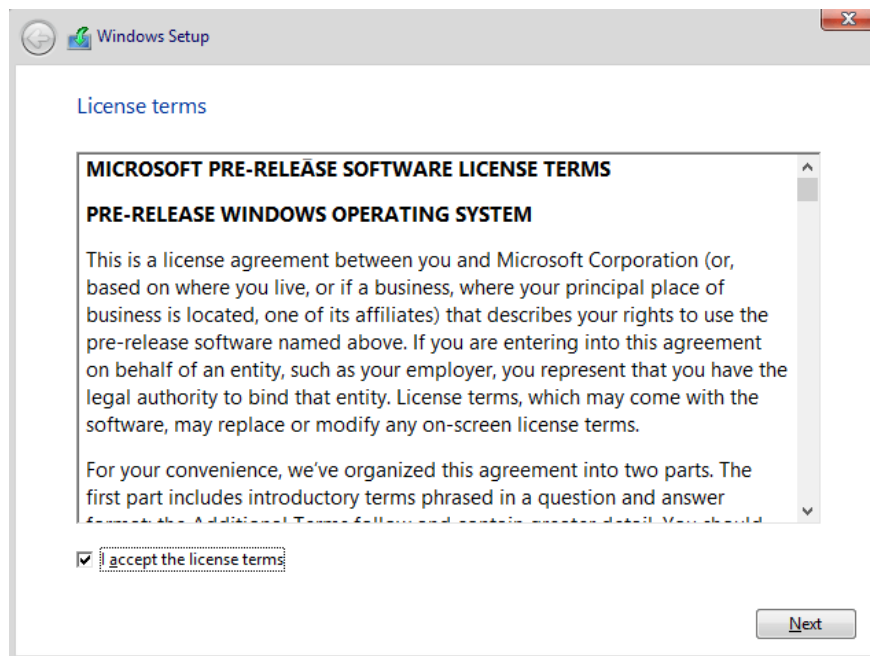

Click Install now to begin the installation.

+ Step 2: If you have a license key, enter here and click Next, if you don't have one, or you want to enter it later, click Skip as shown below.

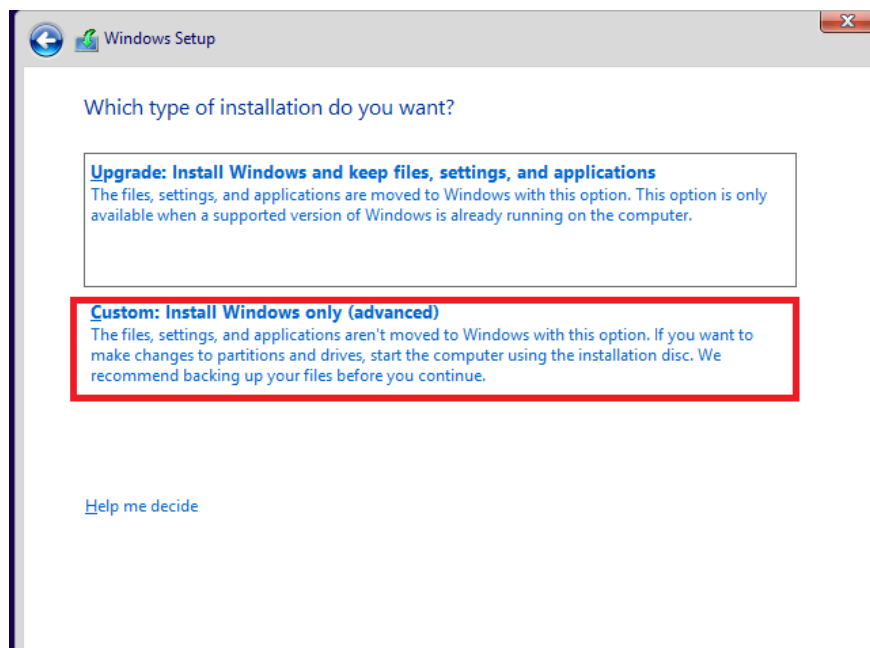

+ Step 3: Read the terms of Microsoft, MS gives the terms as well as terms of use, select I accept the license terms => and click Next to agree.

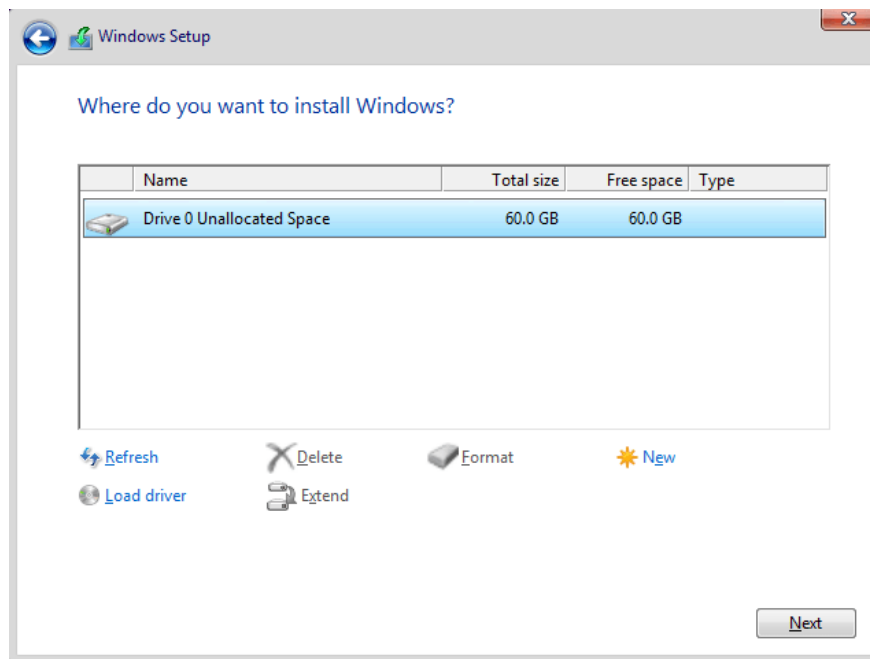

+ Step 4: There are 2 options for you:

1. Upgrade: That is, if you are using a licensed Windows XP, you can click on it to upgrade to Windows 7 version.
2. Custom (advanced): For a custom installation, usually we will choose this line.

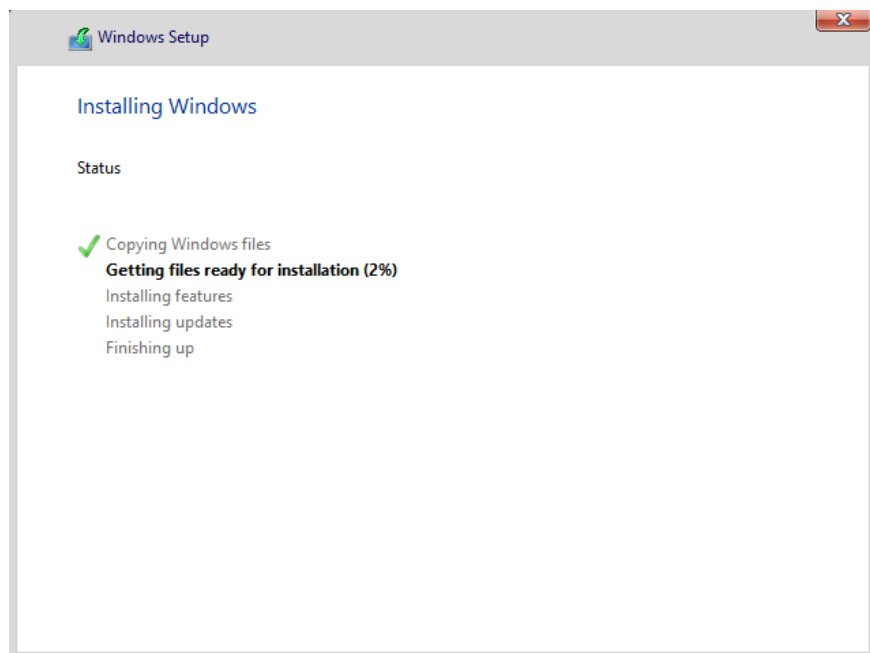

Here I am instructing a new installation, so I will choose Custom: Install Windows only (advanced)

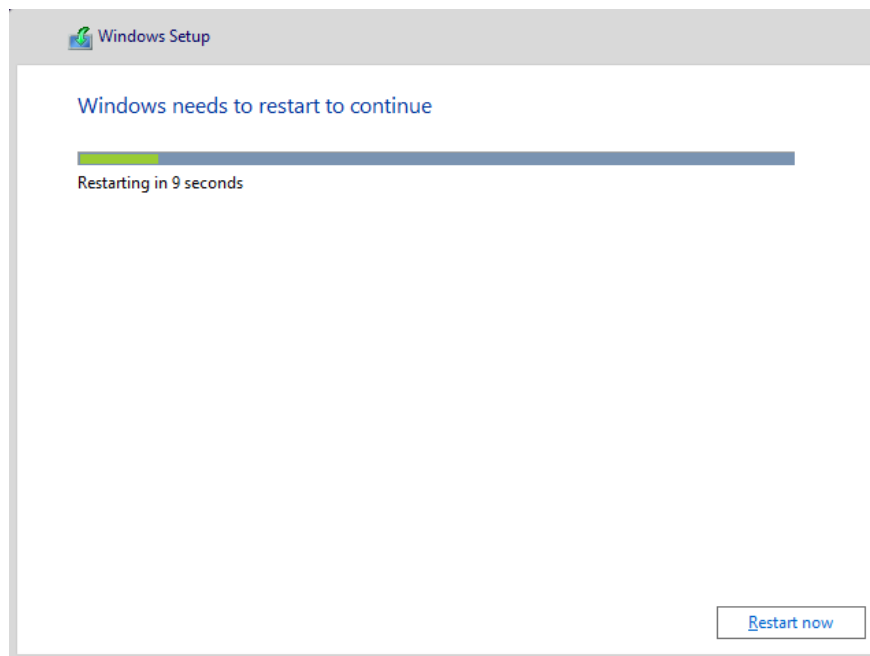

+ Step 5: Select the partition where you intend to install Windows 10 from the beginning => click Next. (You split the hard drive quickly if you forgot the preparation step.)

+ Step 6: Wait The installation process starts, whether fast or slow depends a lot on the configuration of your computer.

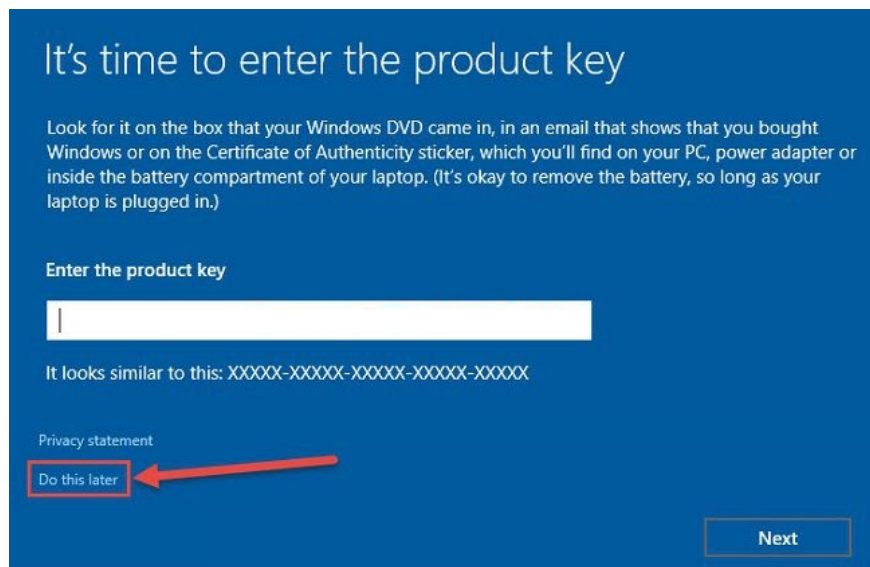

After finishing the copy and installation process, the system asks you to reset the machine to continue. Click Restart now

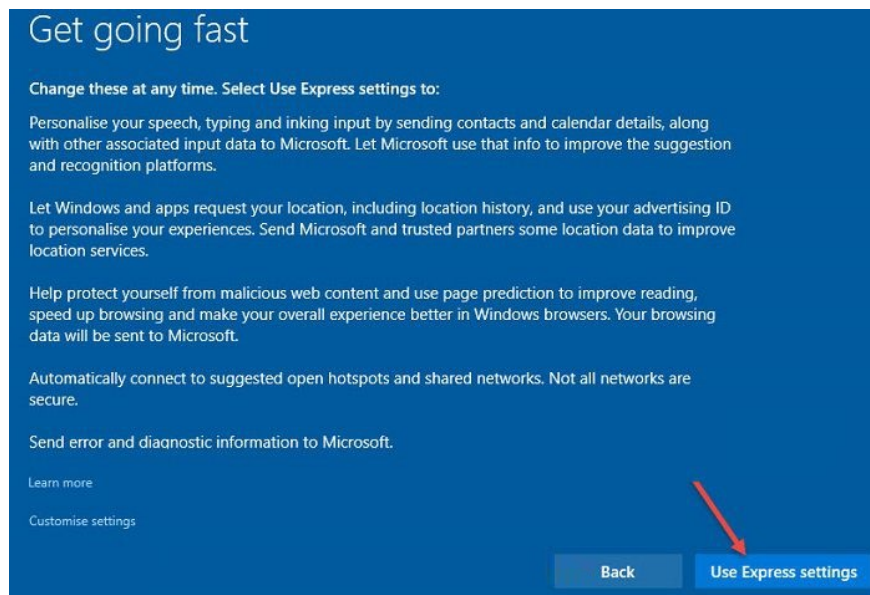

+ Step 7: The system setup is in progress, please wait a few minutes.

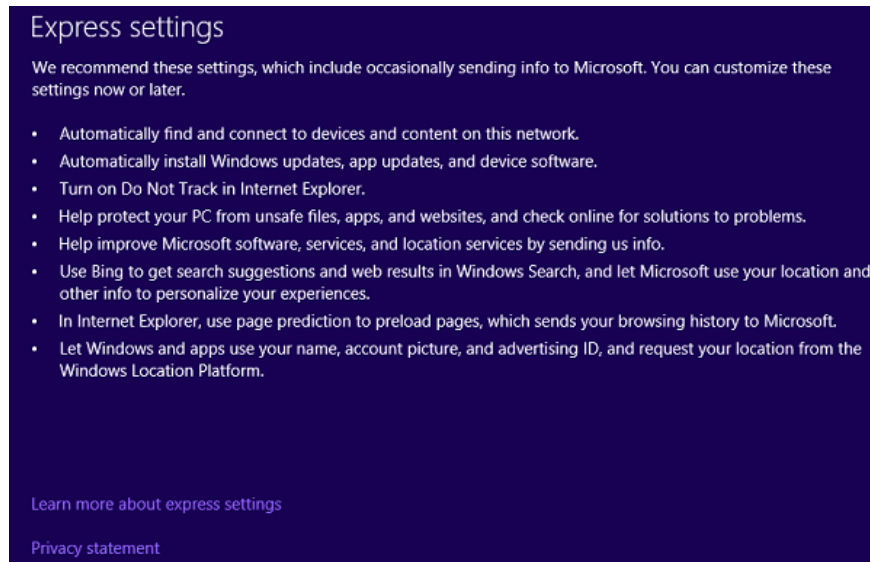

+ Step 8: Here, Microsoft continues to display a window asking you to enter a license key, click on the option Do this later to enter later.

+ Step 9: Next, choose Use Express settings to choose and use the default settings of Windows 10 or you can choose Customize Settings to set up according to personal needs.

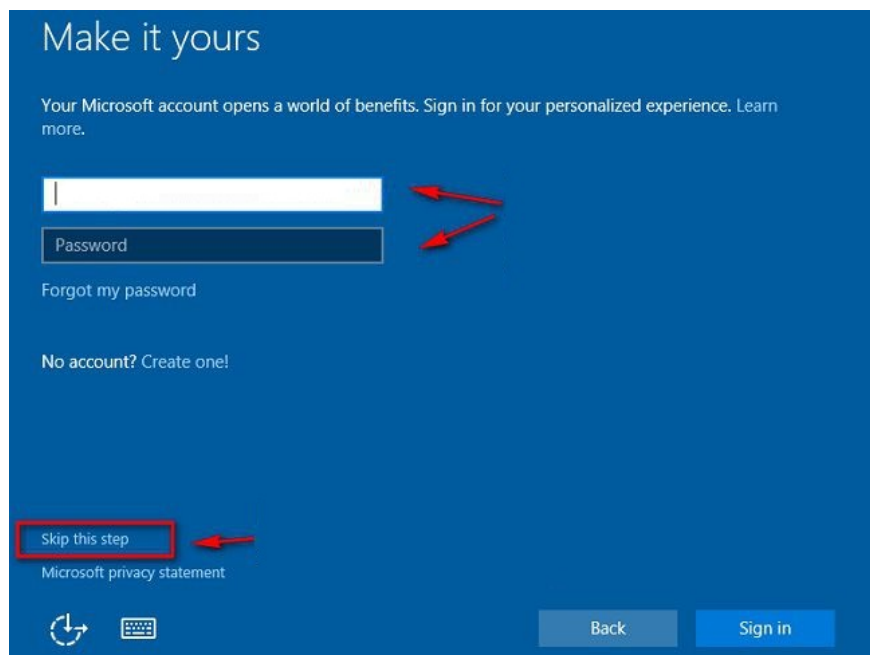

=> Here I choose Use express settings to install by default.

+ Step 9: This step, if you have an existing Microsoft account, you can always enter and click Sign in to sign in. If not, then click Skip this stop to sign in later.

=> Because I don't want to login here, I will choose Skip this step.

+ Step 10: If you choose the account as Local Account, a dialog box will appear as shown below. Please enter your name and password on the computer => click Next to continue.

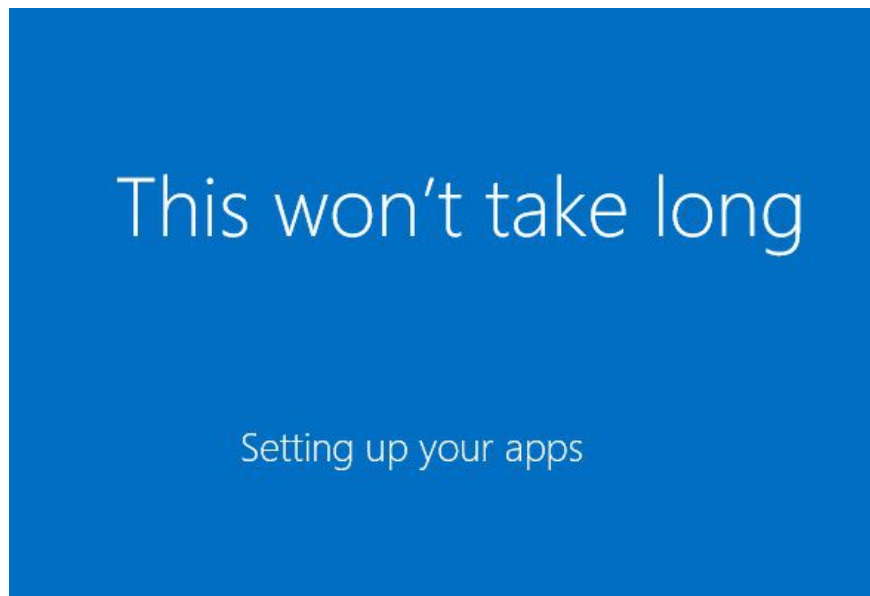

Create an account for this PC
blogchiasekienthuc.com
If you want to use a password, choose something that will be easy for you to remember but hard for others to guess.

Who's going to use this PC?

Make it secure.

  Back Next

+ Step 11: OK! At this point, you just leave Windows automatically do the rest of it.

+ Step 12: The login screen appears, enter the password that you put here earlier => and press Enter to access the Desktop.

+ Step 13: The Windows installation process is complete, now you can explore the full features of Windows 10 through your Windows 10 usage series.

Finish the installation!

3. How to install Windows 10 on VMware virtual computer?

If you do not want to give up the operating system that you are using but still want to experience the new Windows 10 operating system, now there are two directions for you to choose from:

That is to install Windows 10 in parallel with the current Windows (see instructions on how to install two parallel operating systems), or a very good way is to install Windows 10 on a virtual computer.

4. Conclude

Hopefully this article on how to install Win 10 will be useful and hope you have a pleasant experience with this Windows 10 operating system.

Good luck!
