

Instructions on how to put Google Photos GIF images on Instagram on Android and Android

Google Photos is not just a place for you to store photos or videos in the cloud, it also has some cool things that other services don't have. And here's how to use them on Instagram.

By machine learning, **Google Photos** can identify people, places or things smartly. One of the interesting things **Google Photos** brings is Assistant (don't mistake her for another Assistant Assistant of Google on Android phones or Google Home).

On iOS and Android's Google Photos application, Assistant is a control panel based on card information, with capabilities:

1. Display data backup status.
2. Automatically create videos based on related video clips.
3. Create animated effects based on a series of images (You can create effects by typing from 2 to 50 images, resulting in a GIF file).

Users must be truly amazed at this great tool, because it definitely defeats even the specific applications that create GIFs from other photos or videos. You can share this GIF file to Twitter, Giphy or anywhere but to share it on Instagram it is impossible if you don't switch to the video format. And here's how to share these GIFs on Instagram.

On iOS phones

Step 1 : Install GifLab application (free) to convert GIF images into videos. To find your product, type the name in the search bar on the Photos app, then select the GIF in the list you've saved. Photos created by Google Photos that have not been saved for 30 days will be deleted, so after creating them, be sure to save them.

Step 2 : Then select the 3 dots icon on the right corner of the screen and select **Download** to save the GIF image.

Step 3 : Open GifLab and select **GIF to Instagram**.

Step 4 : Select GIF image to convert and adjust playback speed.

Step 5 : Select **Save and share to Instagram**.

On Android phones

If using Android, the steps are easier because you can share GIF images directly from Google Photos to Instagram, the application will automatically convert GIF images into videos without installing any additional applications.

Please select the animation in the list on Google Photos as mentioned above, then select the sharing icon in the lower left corner. Choose Instagram and share. Once the GIF image has been converted into a video, users can

select the filter or add a description before uploading to Instagram.
