

Instructions on how to quickly install Ghost Win 7 using USB

How to ghost Windows 7 to fix errors caused by viruses or software errors on the computer is of interest to many people.

In today's technological age, computers have become an important tool, serving users for study, work and entertainment. How to ghost Windows 7 to fix errors caused by viruses or software errors on the computer is of interest to many people. If you still don't know how to ghost using USB on Win 7, please refer to TipsMake's article below.

What is Ghost Windows?

Ghost Windows is derived from the norton ghost software used as a hard drive repartition in an emergency. Simply put, this is when you copy data areas from your computer's hard drive to other storage devices. When you Ghost Windows, the data you copy to your hard drive will immediately be copied as a .GHO file or Ghost file.

Ghosting via USB will help you easily back up and restore drive data in the system back to its original state. Besides, **ghost win from USB** also helps you recover data as quickly as possible in case the hard drive has problems due to virus intrusion.

With **the USB ghost method** guided by TipsMake in the next content, you will be able to ghost multiple Windows 7 computers at the same time without having to create a Windows ghost set multiple times.

So how to **ghost using USB** on Win 7? Please follow the content below to find the answer!

Prepare before Ghost Win 7 using USB

Before performing **ghost Windows 7 with USB in 3 steps**, TipsMake wants you to note that you need to prepare the following things to make the process of Ghost using USB go more smoothly:

1. You should use a USB device with at least 1GB of memory or more.
2. Before performing the instructions on **how to ghost from USB**, you must download two USB Format tools and grub4dos.zip tool to your computer. These two tools help format the USB to FAT 32 and create the ability to boot the USB.
3. Download Hiren's BootCD tool to your computer to boot and edit more quickly.

4. Follow **instructions to create Windows 7 ghost file using USB** with .GHO format to create ghost.

Instructions on how to use Ghost Win 7 using USB

After fully preparing as above, you can perform **ghosting using USB** by following these simple steps:

Step 1: First, you need to use Hiren's BootCD tool to create a **bootable USB** .
