

# Instructions on how to record a voice with Bandicam

There are many programs that support recording voice users, and Bandicam is one of those tools and programs. In addition to supporting recording all actions on the screen, with many high quality frames you can use Bandicam to record your voice when needed.

There are now a lot of programs that support recording voice users, and Bandicam is one of those tools and programs. In addition to supporting recording all actions on the screen, with many high quality frames you can use Bandicam to record your voice when needed.

In the article below, Network Administrator will guide you how to record your voice using Bandicam.

1. Download Bandicam software for free

## 1. Record your voice with the option of Two Sound Mixing

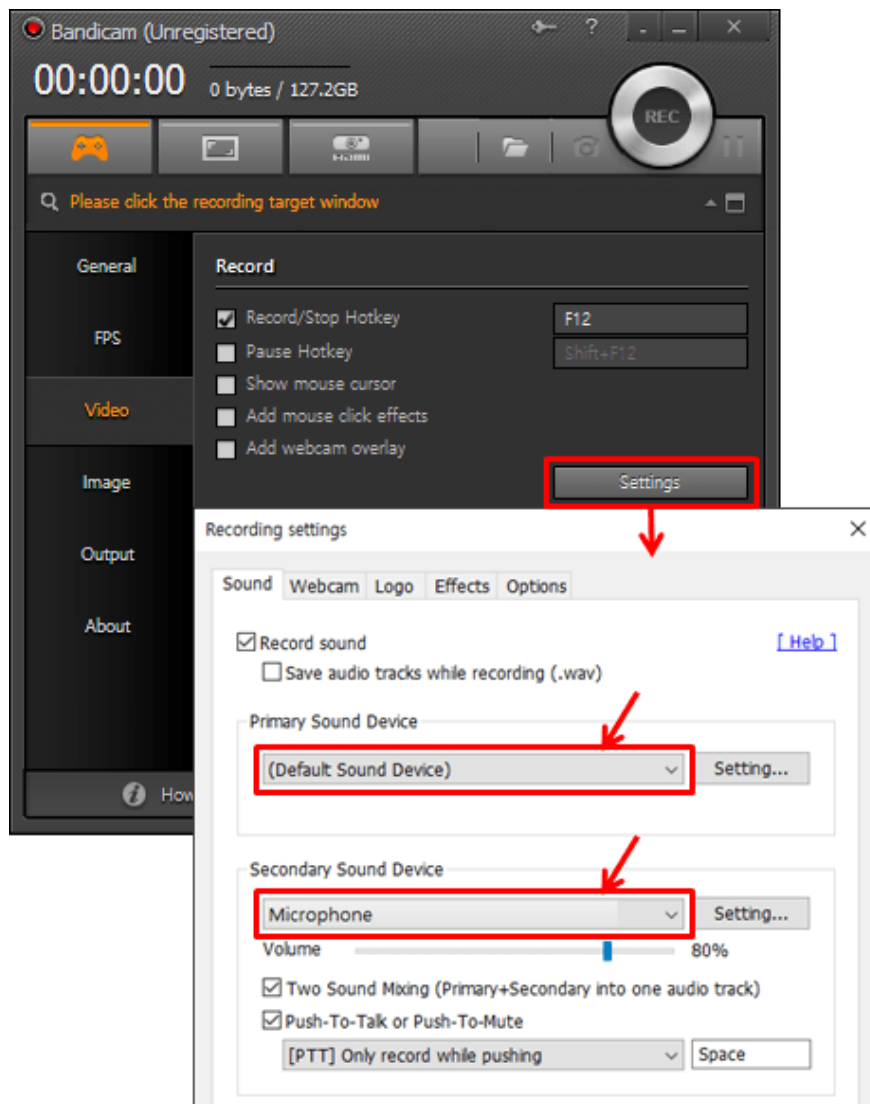

1. Open Bandicam, then click the Settings button located at the Video tab.

- At **Primary Sound Device** : select (**Default Sound Device**) .

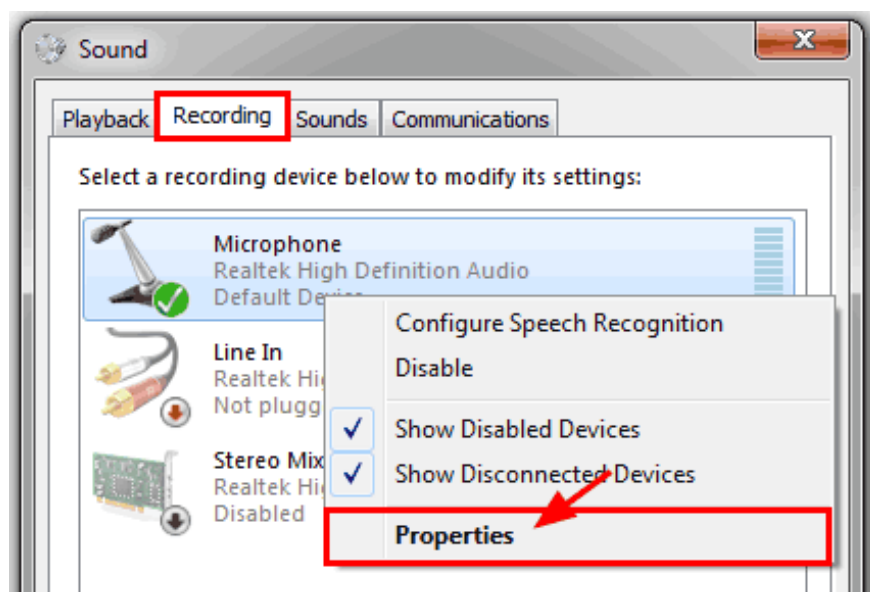

- At **Secondary Sound Device** : select **Microphone** .

- Marking option Option **Two Sound Mixing** .

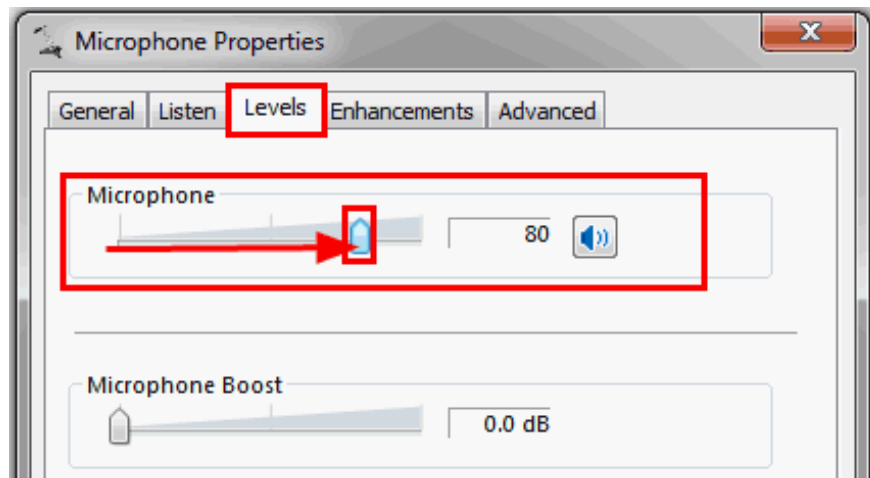

- Click **Settings** to open the "Recording Device" setting of Windows.

2. Select **Properties** at the **Microphone** section .

3. Microphone volume setting in the range of 70% to 90%.

4. At the **Listen** tab, skip the **Listen to this device** section .

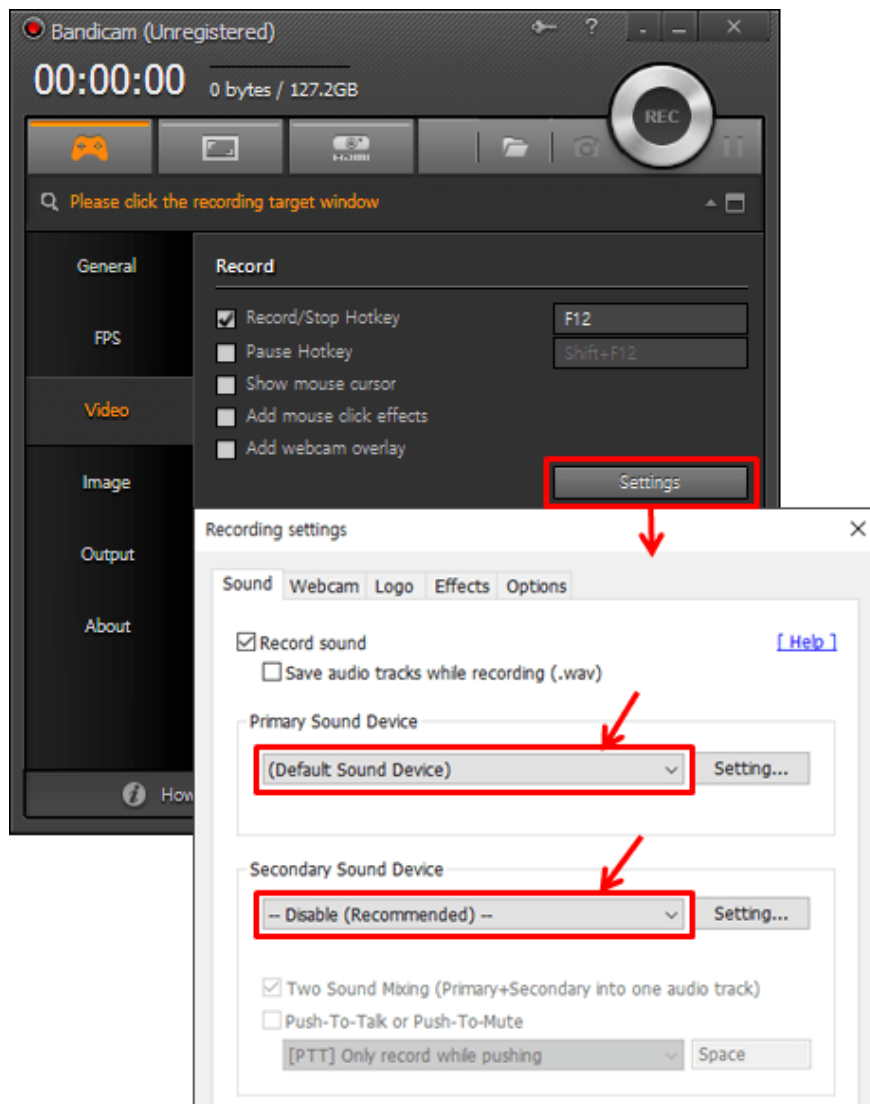

## 2. Record your voice without options Two Sound Mixing (on Windows Vista / 7/8/10)

1. Open Bandicam, then click the **Settings** button located at the **Video tab** .

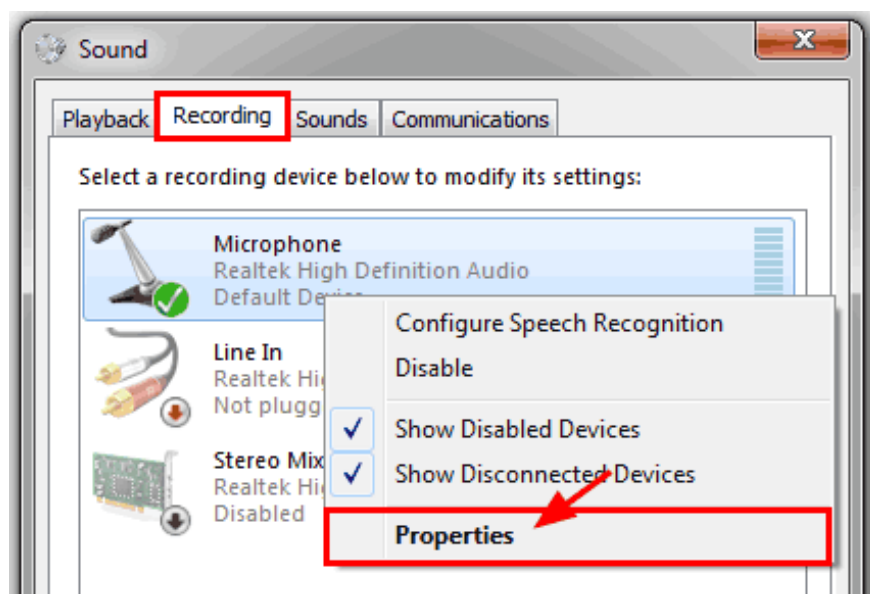

- At **Primary Sound Device** : select (**Default Sound Device**) .

- At **Secondary Sound Device** : select **Disable** .

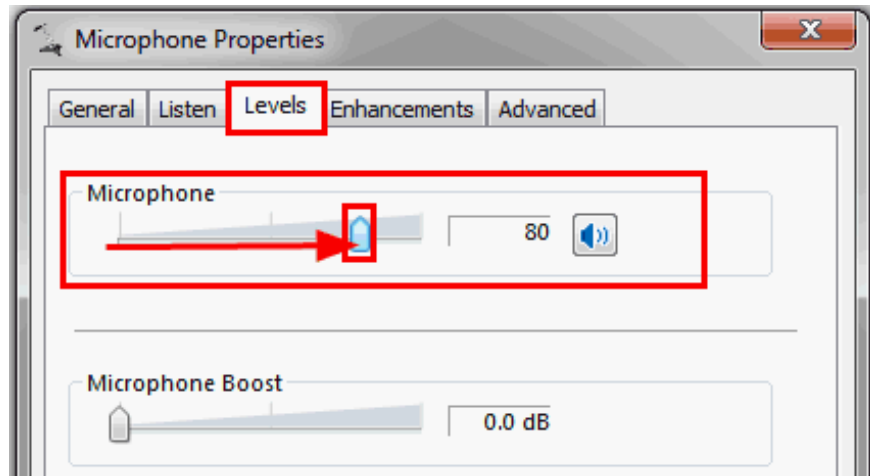

- Click **Settings** to open the "Recording Device" setting of Windows.

2. Select **Properties** at the Microphone section.

3. Microphone volume setting in the range of 70% to 90%.

4. At the **Listen** tab, select the option **Listen to this device**.

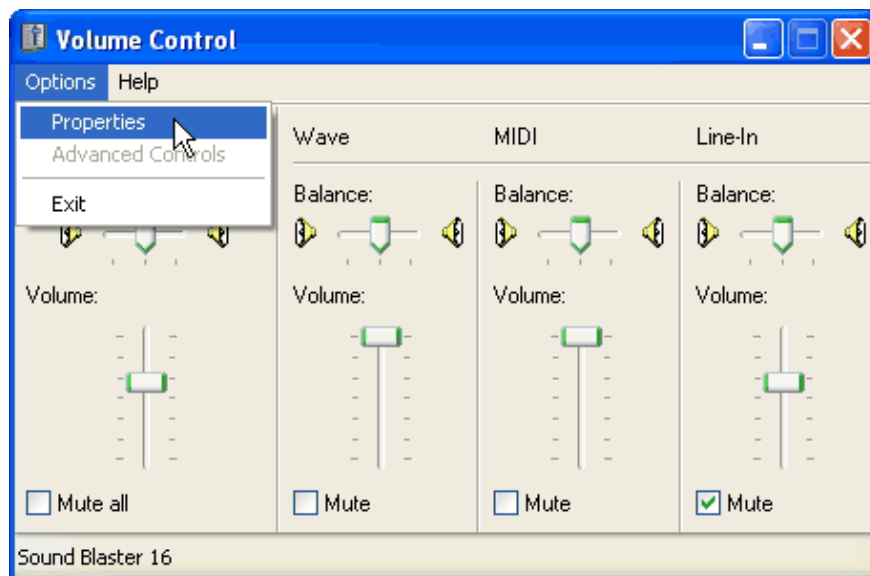

If you cannot record on the microphone, you must reinstall the sound card provided by the manufacturer on your computer.

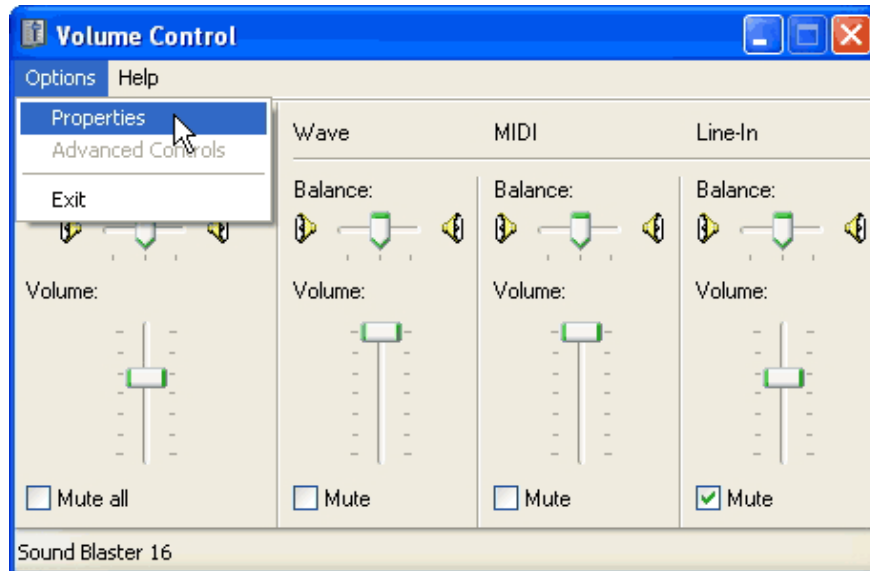

### 3. Record your voice on Windows XP

For voice recording you must activate the Microphone on the Volume Control panel.

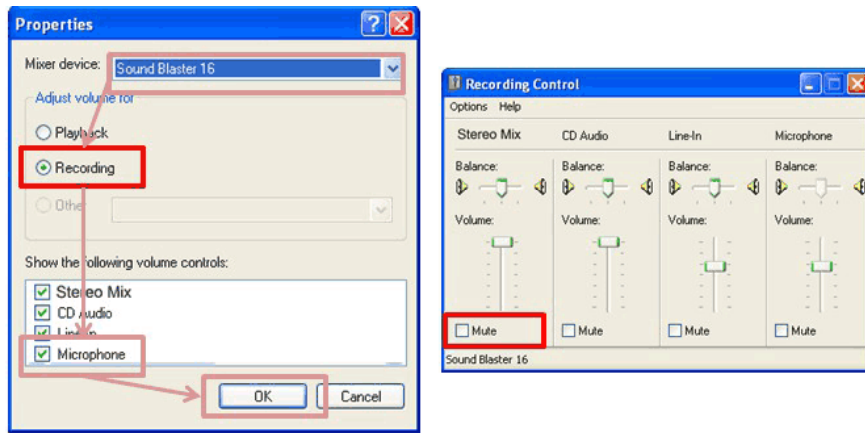

1. Right-click the speaker icon on the system tray, then select the **Open control volume option** .

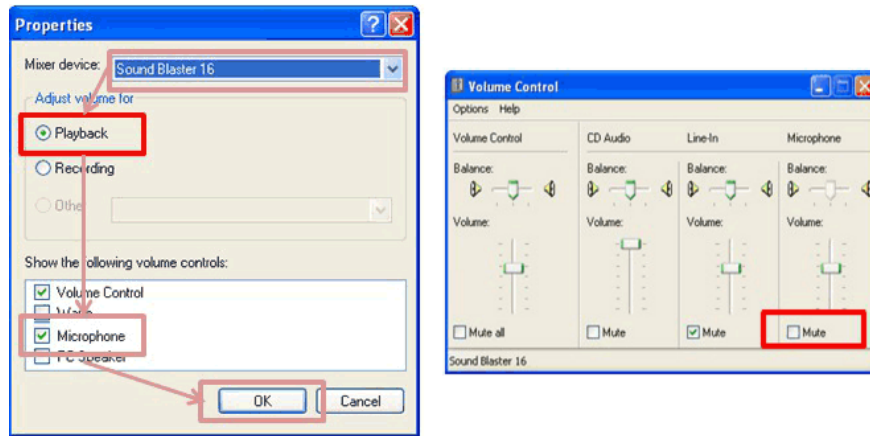

2. On the Volume control window, find and select the **Properties** option.

3. On the Properties window, select the **Recording** option, then select the **Microphone** option below.

4. At the Record control window, uncheck the **Mute** entry.

If there is still an error during the recording process, on the Properties window select the **Playback** option, then select **Microphone** and leave the **Mute** option in the **Microphone** section.
