

# Instructions on how to reset Windows 10 extremely fast and simple

- - Like its predecessors, Windows allows users to reset Windows 10 to its original state. This will cause you to lose all data in the Windows installation drive, but in return it is a feature to help the computer can work again.

## How to reset Windows 10?

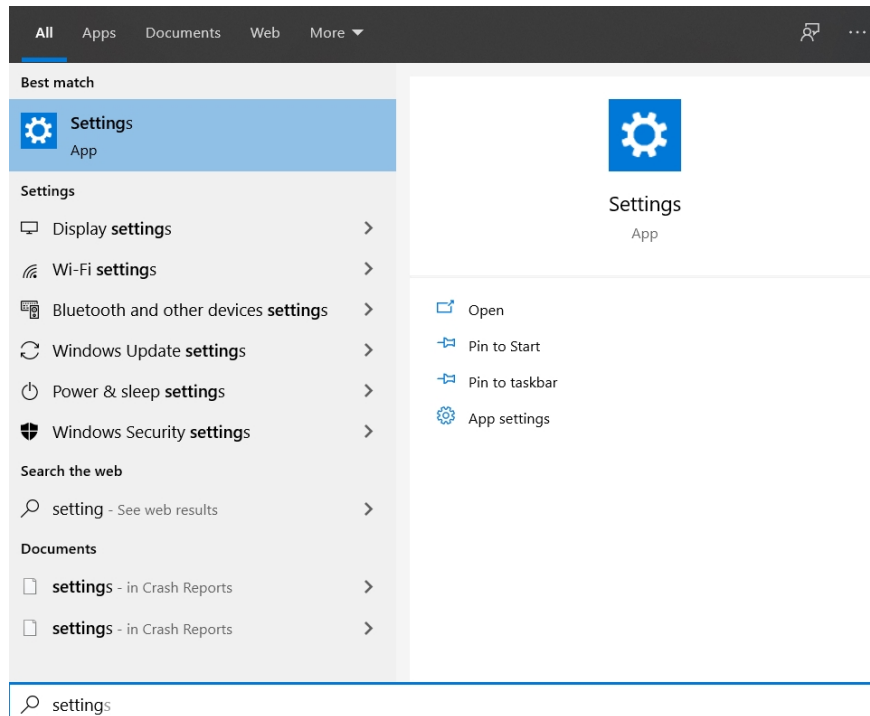

When using a computer and encountering a virus that causes Windows to fail or the computer slows down, the Windows 10 reset feature is the most useful 'rescue' for the computer to return to the new state.

All applications, software you have installed will be lost. In return, your computer will return to the newly installed state, only the operating system and available applications of Windows 10. In short, resetting Windows 10 will return the computer to the same state as when it was installed. Windows.

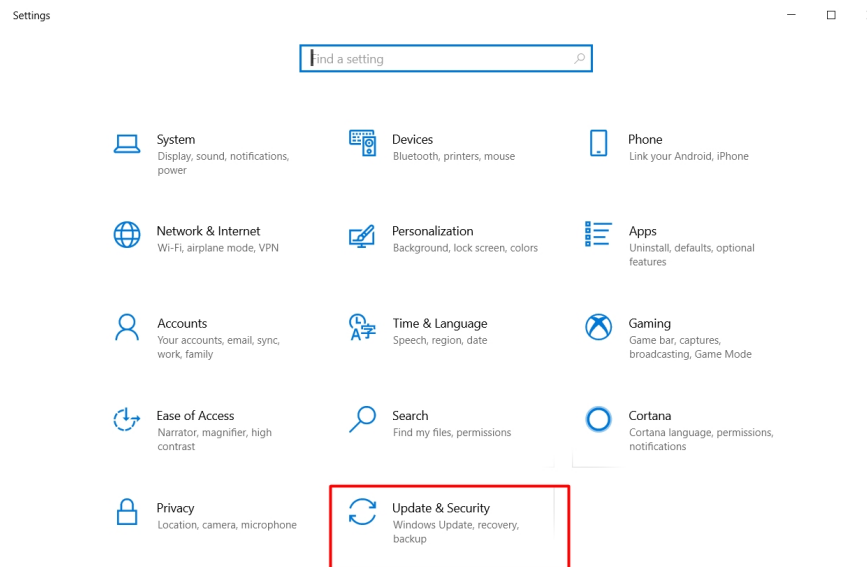

This feature is extremely useful for those who have little experience installing computers. In addition, it is also very easy to do without any external software or tools.

## Instructions to reset Win 10

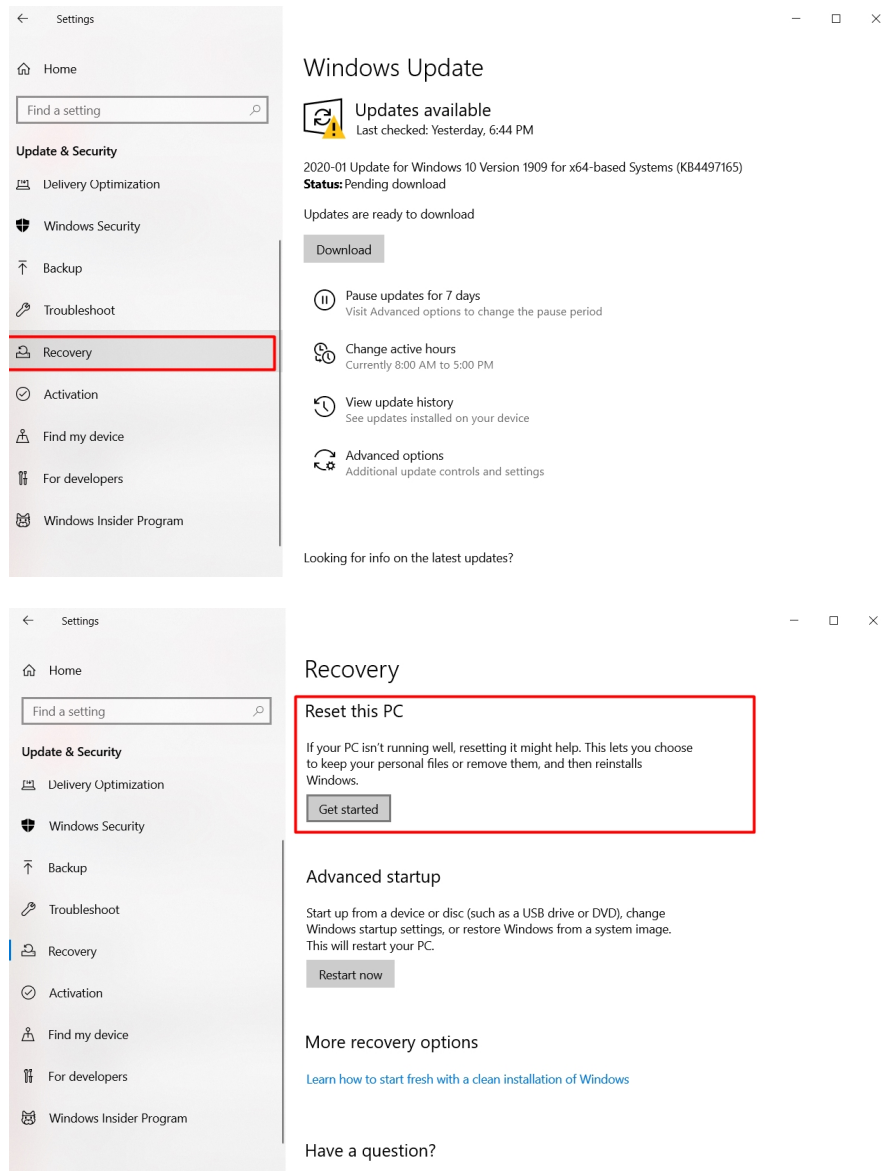

Click Start -> Setting or you can use Windows + I key combination

Then, on the Setting interface, click on the Update & Security option

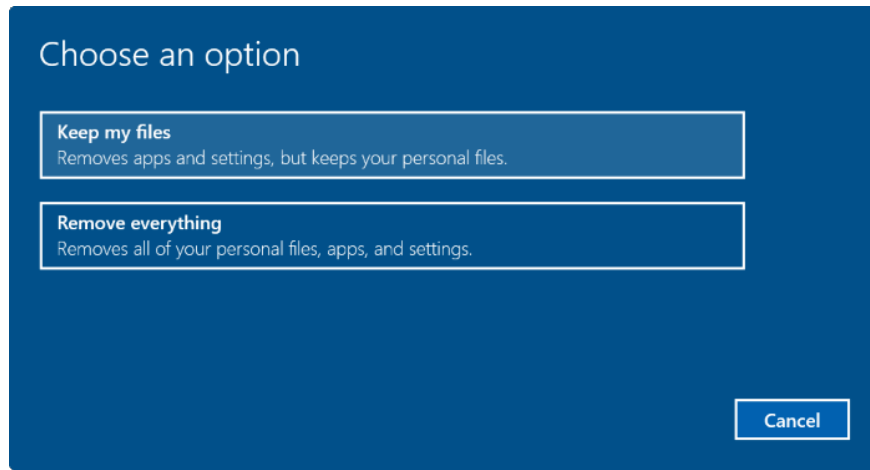

Under Update & Security, select Recovery. Next, the system will allow you to choose from the Reset this PC section and click Get Started.

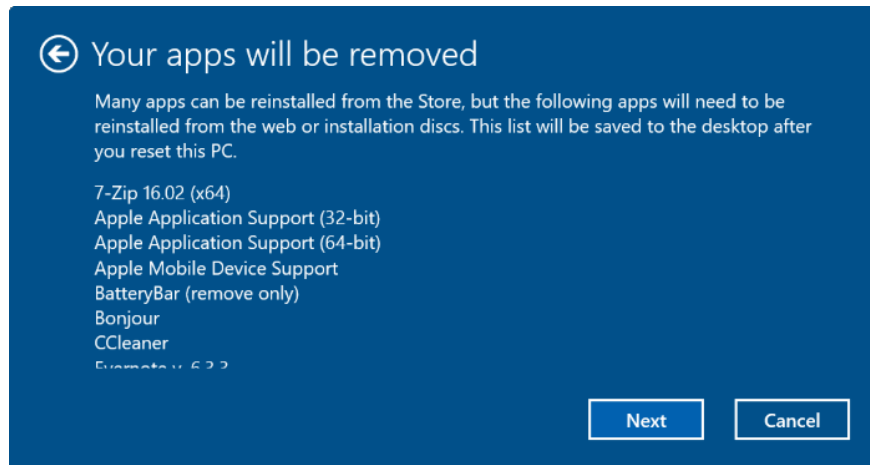

Here, you will have two options including:

- **Keep my files:** Delete all software installed on the computer but will retain the files in the user directory, default at C User username
- **Remove Everything:** Reset all, delete all applications, software on the Windows installation drive

Depending on your needs, you can choose either.

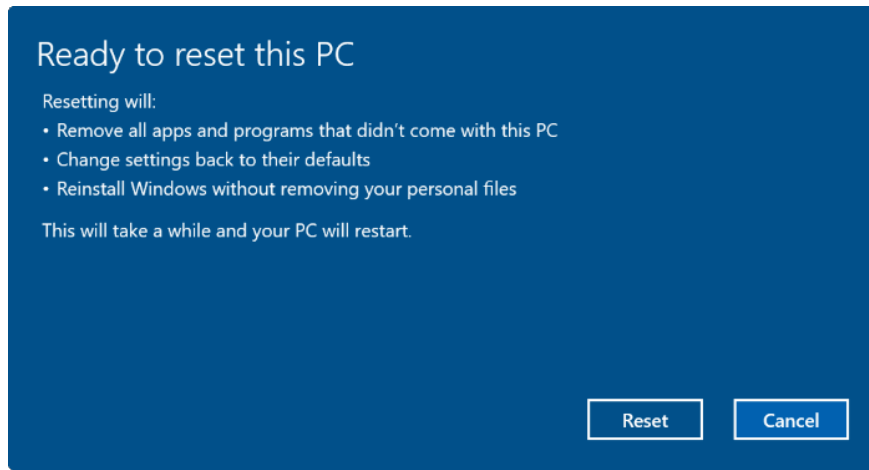

After waiting, the system will display the list of deleted applications. Click Next to continue.

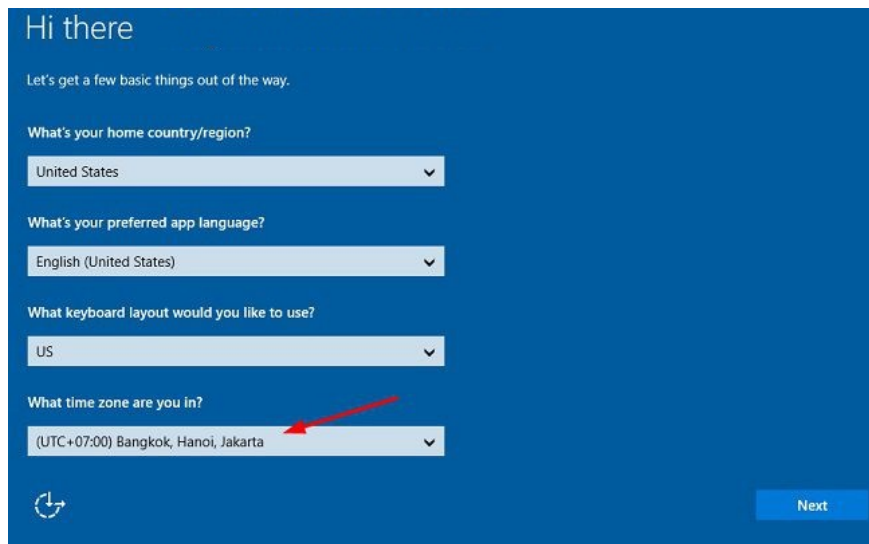

The system will display a warning message if it continues to delete. Click Next if you have nothing to 'freak out'.

Finally, the screen will display Ready to reset this PC. Click the Reset option to start the process. Depending on the hardware handled, the process of resetting Windows 10 will last about 20 minutes to 1 hour.

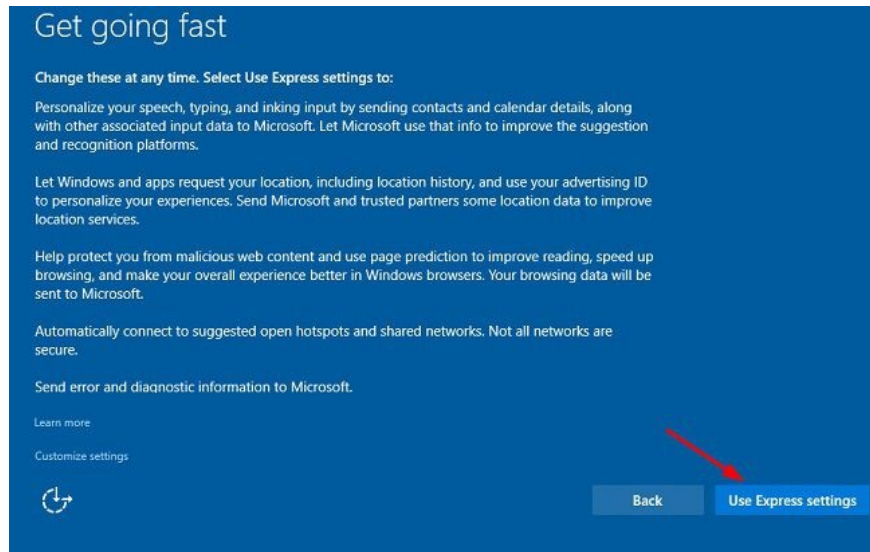

After the reset process is finished, you will have to select the information in Windows. The system will ask about the country you are living in, the language to install the application, how to enter the keyboard and the time zone. You can install as shown below and click Next to continue.

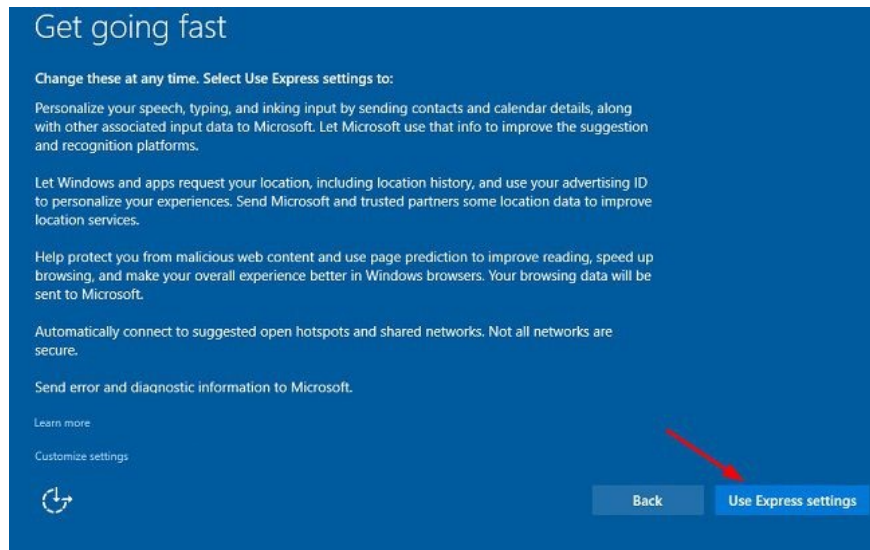

Click Accept

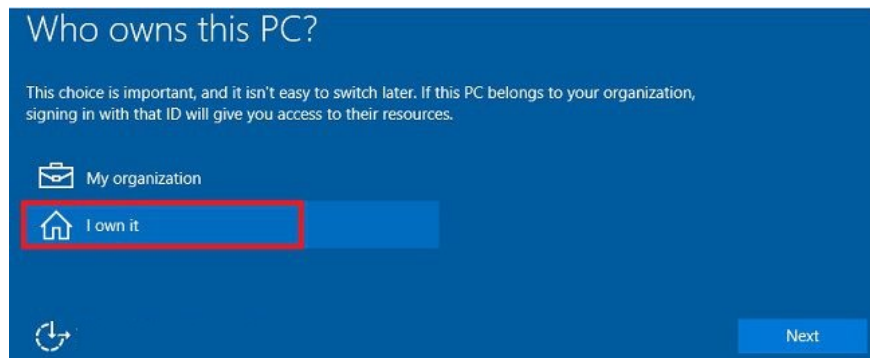

=  
Here, you can choose Customize Settings or Express Settings to install according to the default Windows settings.
