Without the help of 3rd party applications, you can still capture screen images on the Asus Zenfone device with the best quality possible.

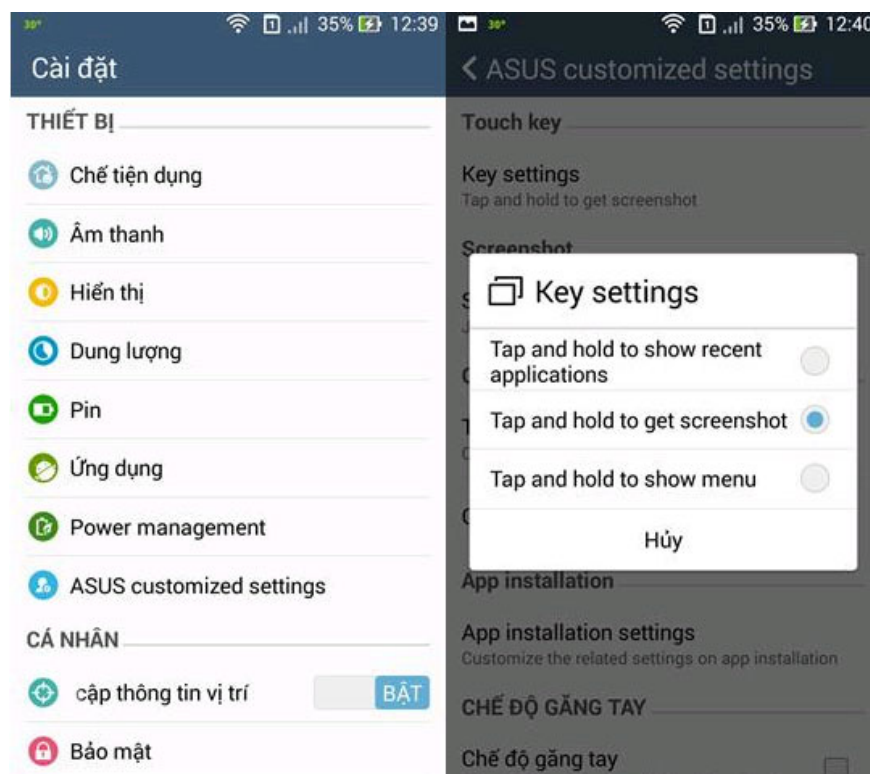

Instructions on how to take screenshots on Asus Zenfone

There are many types of screen capture applications with the most useful features for users. However, as auxiliary applications, it sometimes takes some time to get used to them.

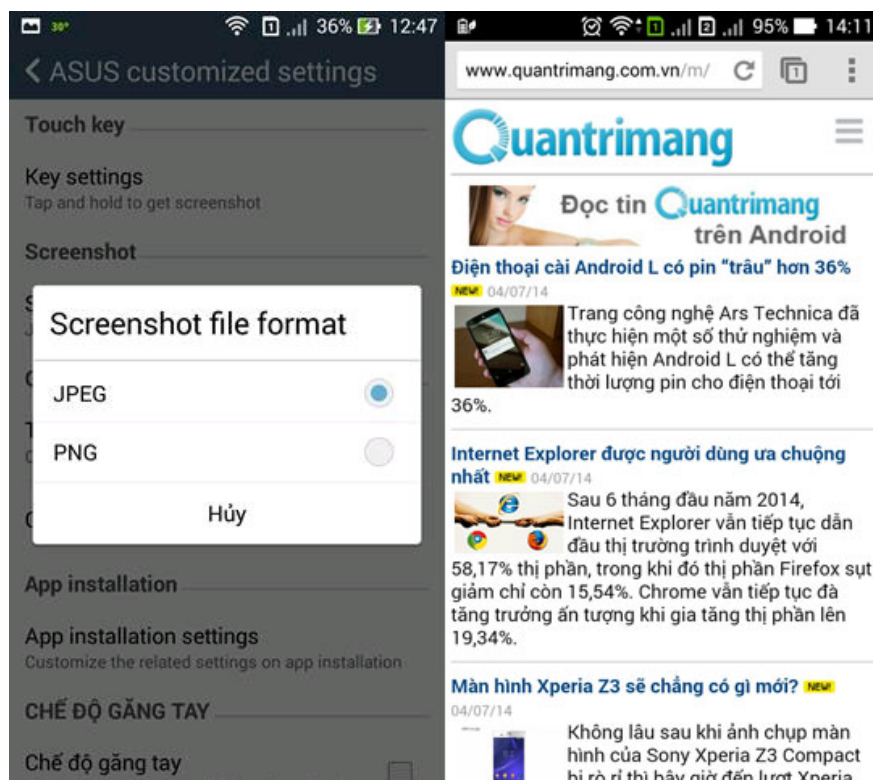

Accordingly, the default on Android smartphones in general or *Asus Zenfone* in particular has a screen capture feature very good and clear. More specifically, on Zenfone series you will have 2 ways to take photos, including:

1. Press the power / open key at the same time, screen lock and volume down key.

2. Go to **settings** (*Settings*) > Select **Asus customized settings** > **Key settings** > **Tap and hold to get screenshot** . You can now use multitasking keys (*2 stacked rectangles*) to take a screenshot by touching it for less than 2 seconds.

Screenshots of the above two ways will automatically be saved to the folder: **Internal Storage > Screenshots** . If you want to save photos taken in other formats, also at **Asus customized settings > Screenshot file format** (*there are 2 types of photo formats: JPEG and PNG*).
