

Instructions on how to turn smartphones into monitors for computers via Wifi connection

This article will show you how to use the Spacedesk driver (completely free) to turn your Android device into a secondary monitor for your computer via a Wi-Fi connection.

This article will show you how to use the Spacedesk driver (completely free) to turn your Android device into a secondary monitor for your computer via a Wi-Fi connection. This helps users not to connect wires easily, easily manipulate, switch between applications without having to turn on / off, increase performance and easily use the secondary monitor in any where .

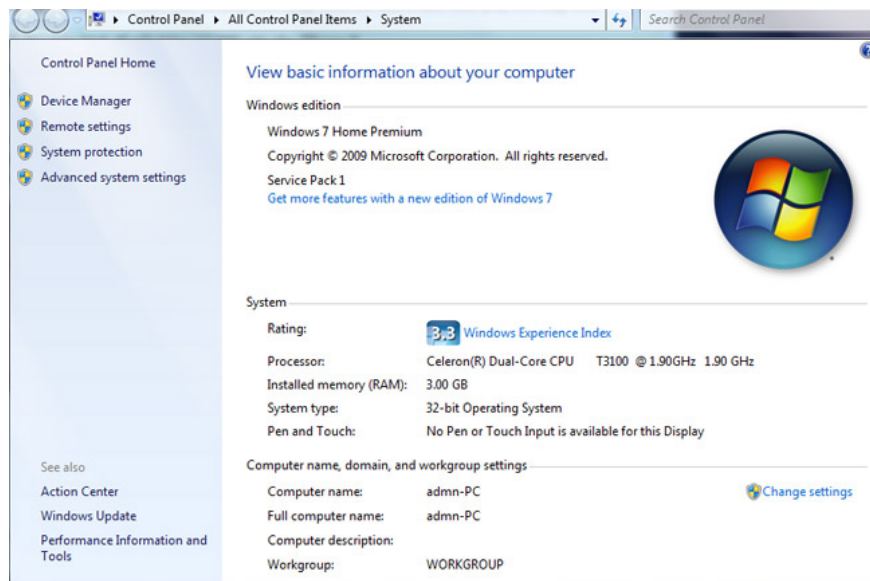

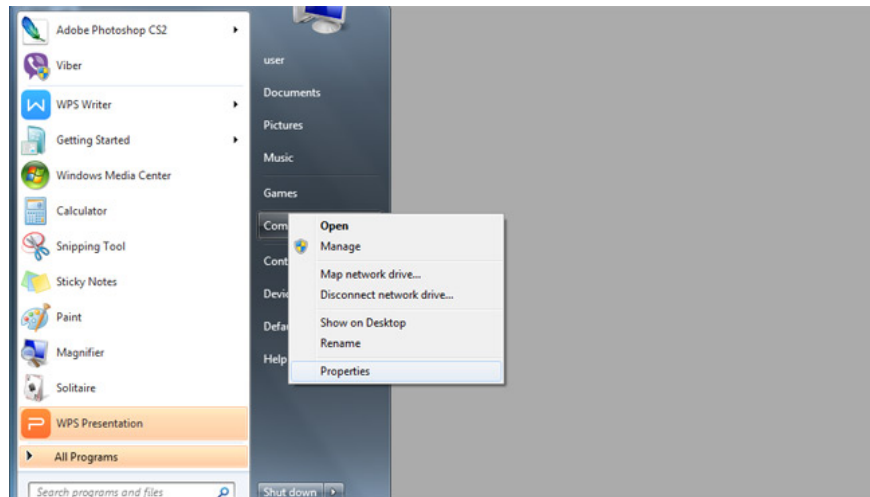

Step 1: Install Spacedesk on your computer

First, you need to download and install the Spacedesk driver for Windows computers. There are two 32-bit and 64-bit versions, you can download Spacedesk [here](#).

If you don't know which version your computer is using, you can check the following steps.

Right-click the **My Computer** icon on the screen -> then select **Properties** .

After downloading the appropriate version with the computer, you proceed to install according to the instructions.

Step 2: Download and install Spacedesk on your Android device

You download and install Spacedesk for Android devices. [Link download here.](#)

Step 3: Connect your Android device to the computer

Connect smartphones and computers to the same WiFi network. Then, open the Spacedesk application on a smartphone or tablet. Spacedesk on smartphones will automatically detect the computer, when the results are available, simply tap the **Connect** button.

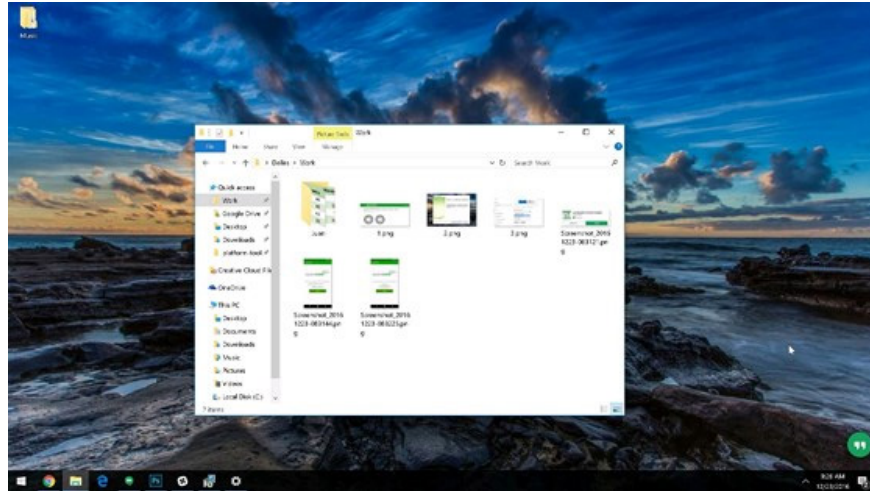

In case, smartphone does not detect the computer, you must manually connect by unchecking the **Auto Network Search** -> then enter the **Local IP address** of the computer. You can see how to check your computer's local IP address here.

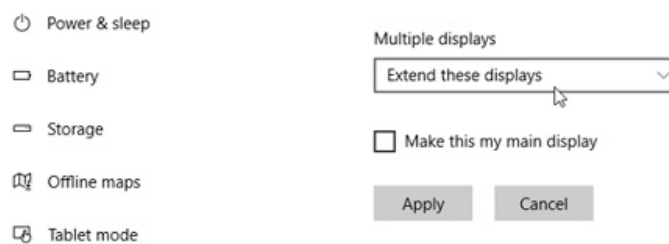

Finally, to connect the two devices together, just press the **Connect** button.

Step 4: Use a smartphone or tablet as a secondary monitor of a computer

Now, on the smartphone screen, Windows desktop will appear. Everything that happens on the computer is reflected on the phone screen.

To use the smartphone as a secondary secondary monitor, right-click any blank spot on the desktop -> then select **Display Settings** -> select **Extend these displays** -> finally click **Apply** to apply.
