1. Download the latest version of iTunes for your computer or laptop.

If your computer doesn't have iTunes installed, you can download the latest version of iTunes here.

Download **iTunes 12.6.2 32bit**

Download **iTunes 12.6.2 64bit**

The page will display a list of iTunes versions from the newest to the oldest. You can choose a version compatible with your computer's operating system (**64-bit or 32-bit**). Note: You should check your operating system before downloading the application to avoid downloading an incompatible version, which would require you to redo the process and waste time.

The download process is very simple; you just need to click the download button, and your browser will display a link. Simply click on that link to download and install the software on your computer's operating system. For faster downloads, you should download IDM (Internet Download Manager), a software that supports high-speed downloads. When you download IDM , you get 30 days of free use of all features, which is enough to download many large files to your computer.

2. Instructions on updating iTunes to the latest version for computers and laptops.

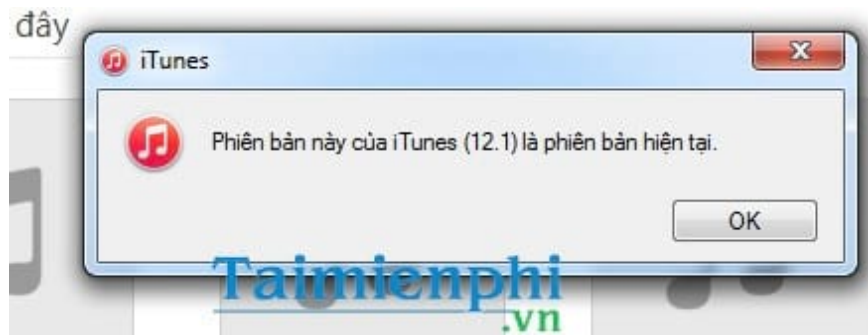

If your computer already has iTunes installed and you want to upgrade to the latest version, the first thing you should do is check your current iTunes version. This will help you determine which version you're using and whether you need to update iTunes. To do this, follow these steps:

Step 1: Open iTunes. On the application interface, click on **Help** and select **Check for Updates** .

Step 2: After clicking Check for updates, two things can happen:

- Firstly, if the iTunes you are using is the latest version, it will display a message saying: 'This version of iTunes is the current version'. Therefore, you don't need to update it again.

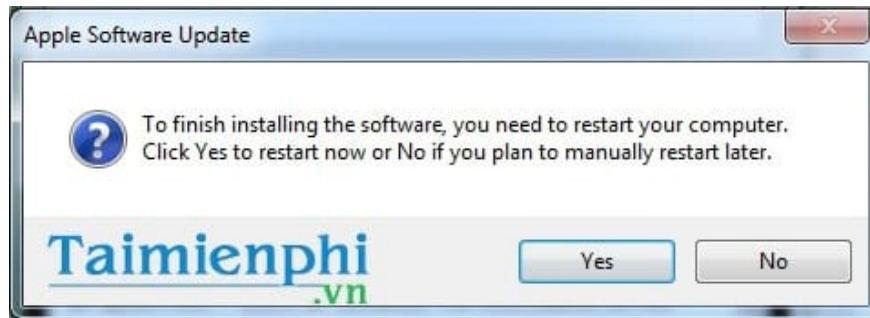

- In case 2, a notification will appear about the latest version of iTunes and ask if you want to update. Click the **Download iTunes** button to start the update process and proceed to the next step.

Step 3: After clicking **Download iTunes**, the **Apple Software Update** window will appear. Click **Install** to proceed with the upgrade.

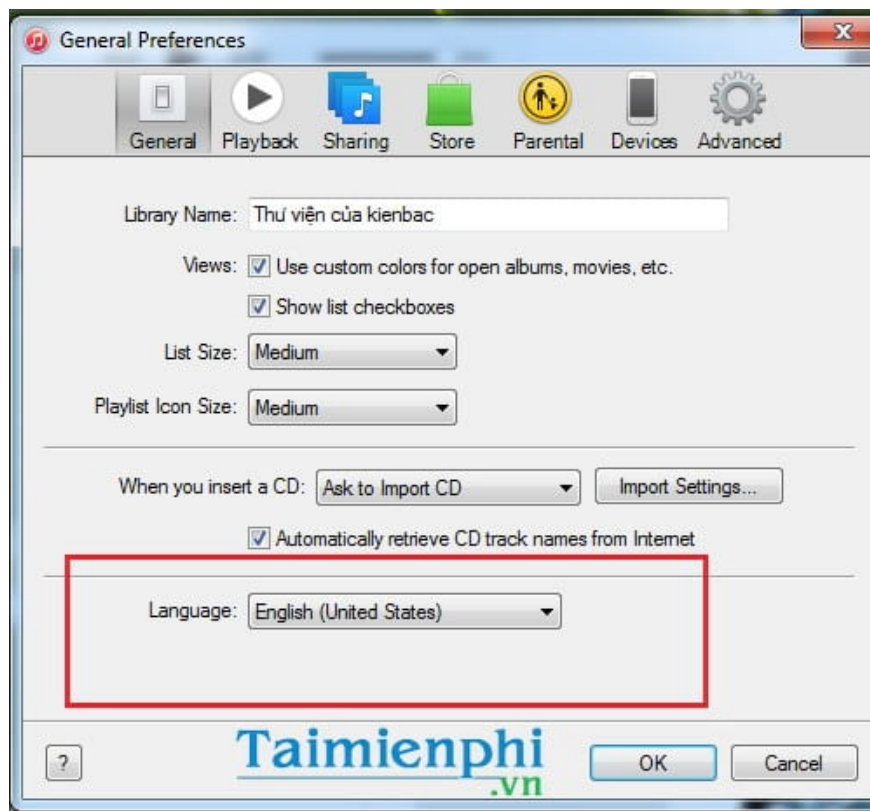

Step 4: The update process will take some time, the speed of which depends on your computer's configuration. Your computer will require a restart when the **iTunes update** is complete; however, you can choose **Yes** to restart immediately or choose **No** to decline and use iTunes directly.

Please note that after the update is complete, your iTunes application will default to English. To switch to Vietnamese, on the iTunes interface, click the **Edit** menu and select **Preferences** (or press Ctrl + ',').

The settings window will appear; find the **Language** section and select Vietnamese.

Through this article, you now know how to **update iTunes** and download the latest version for your computer or laptop, right? With just a few simple steps, you'll have the current version of iTunes. Hopefully, this article has provided you with a lot of useful information. Good luck!
