

# Instructions on how to view SIM / ICCID numbers on Android phones

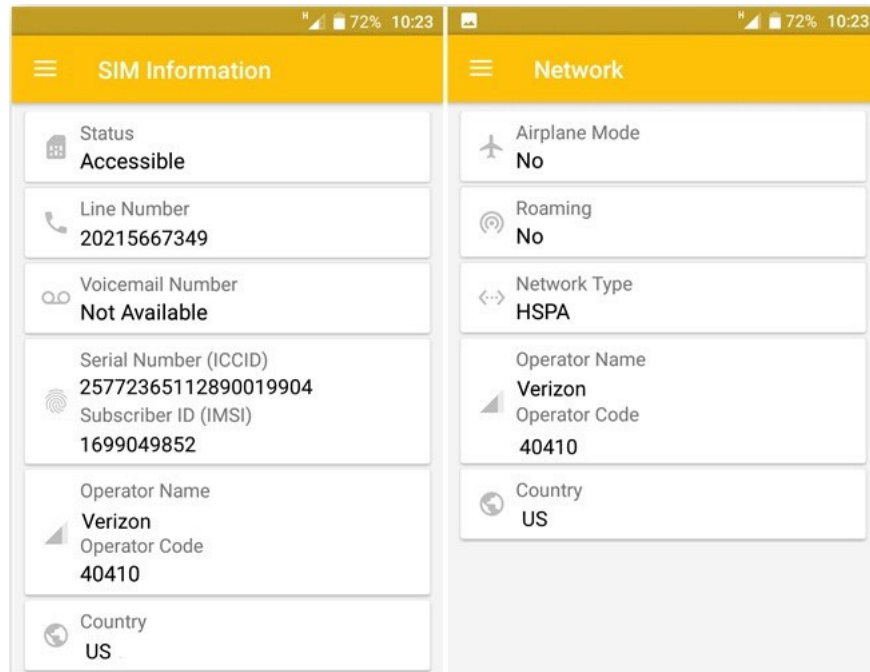

Everyone knows their mobile phone number, but not many people know the SIM number or ICCID number of the SIM card. This unique SIM number (ICCID) is usually 20 characters long and is stored inside the SIM card memory.

Each mobile phone must have 1 SIM card inside. Without a SIM card, you can't make outgoing calls and can't have your own mobile phone number. Everyone knows their mobile phone number, but not many people know the SIM number or ICCID number of the SIM card. This unique SIM number (ICCID) is usually 20 characters long and is stored inside the SIM card memory. If you do not record this SIM number when you first buy the card, you will have to go to the mobile service office to know what the 20 characters are.

However, if you have an Android smartphone, you can easily know this information with more information using the **SIM Card Info application** . The application does not require any special privileges. It only reads all the information from the SIM card you have installed on your phone.

The application displays three types of information - SIM, Network and Device. Under the SIM section, you can see the status of the SIM, mobile phone number, voicemail number, ICCID number (SIM number), IMSI number (international mobile subscriber identification number), service provider name. Mobile, operating code and country where the SIM card is issued.

In the Network section, you can find information about flight mode, mobile roaming mode (if the phone is in roaming mode you will have to pay more to make calls), type Network (HSPA, LTE, etc.), operator name, operator code and country name where the mobile network is accessed.

However, you cannot view this information as a TXT or PDF file. But you can take a screenshot and upload this image to Google's cloud storage and review it as needed.
