DriverEasy automatically updates drivers on your computer, ensuring smooth system operation and minimizing hardware errors. Let's explore how to use this software to easily update your drivers .

Instructions for updating drivers on Windows

Step 1: After downloading **DriverEasy** , click on the utility icon located on the Desktop.

Alternatively, if it's not on your Desktop, you can use the Start Menu to search.

Step 2: Click **Scan Now** to start the search. Besides this direct button press, you can also click the **Scan** tool available on the toolbar.

The search process takes a few minutes, depending on the number of software programs installed and the configuration of the computer you are using.

Step 3: After the scanning process is complete, the software will display the following information:

- Outdated driver: The number of outdated or obsolete drivers.
- Missing driver: The number of missing drivers.
- Devices Scanned: The total number of devices and software scanned.
- Scanning time: The time taken to complete the scanning process.

Click **Get Drivers** to download and update the drivers that DriverEasy has found.

Step 4: You can download one, several, or all of the drivers that this utility has found to your computer. The utility will automatically install these drivers for optimal performance on your computer.

So, with just a few simple steps, you can automatically update your drivers using DriverEasy, keeping your system in optimal condition. If you want to check the drivers again after updating, you can use the outdated driver scan feature to ensure everything is fully up-to-date.
