

Instructions to add Gmail to Outlook 2013 via POP protocol

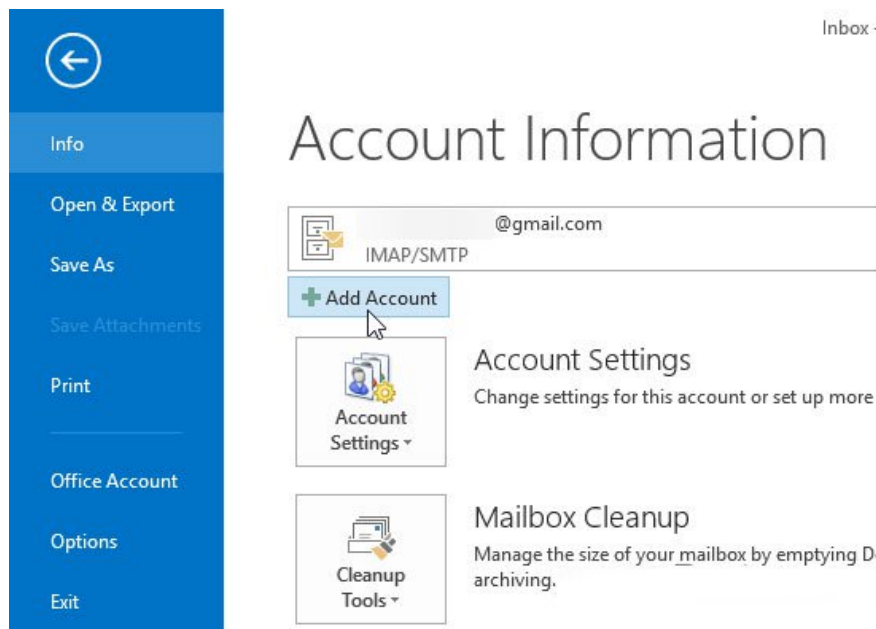

If you have a Gmail account, the POP protocol is enabled by default. In Outlook 2013, setting up a Gmail account using POP protocol cannot be easier.

TipsMake.com - If you have a Gmail account, the POP protocol is enabled by default. In Outlook 2013, setting up a Gmail account using POP protocol cannot be easier.

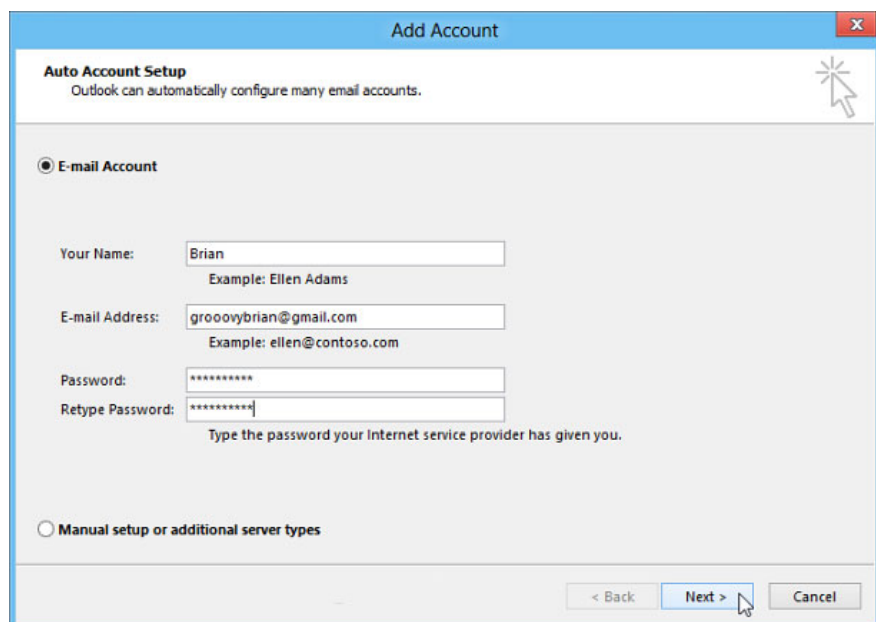

By default, Gmail uses POP protocol, if it has changed to IMAP, go to Gmail Settings and enable POP and disable IMAP.

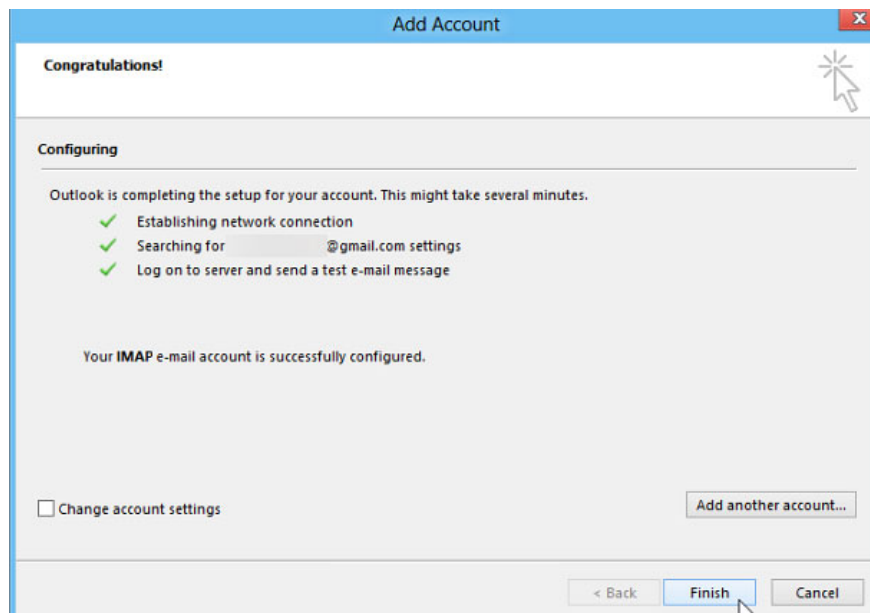

Launch Outlook and click the File tab. Then click Add Account on the right.

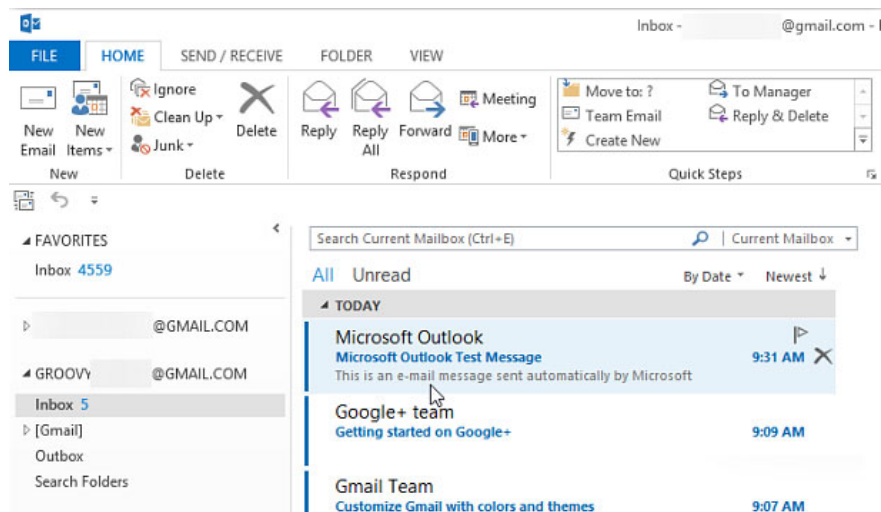

The Add Account configuration window appears. Enter the name, email address and password twice then click Next.

Outlook will authenticate the settings and complete the account setup process. Click Finish.

You can now send and receive email from your Gmail account via Outlook.
