

Instructions to block websites from accessing the camera on Edge

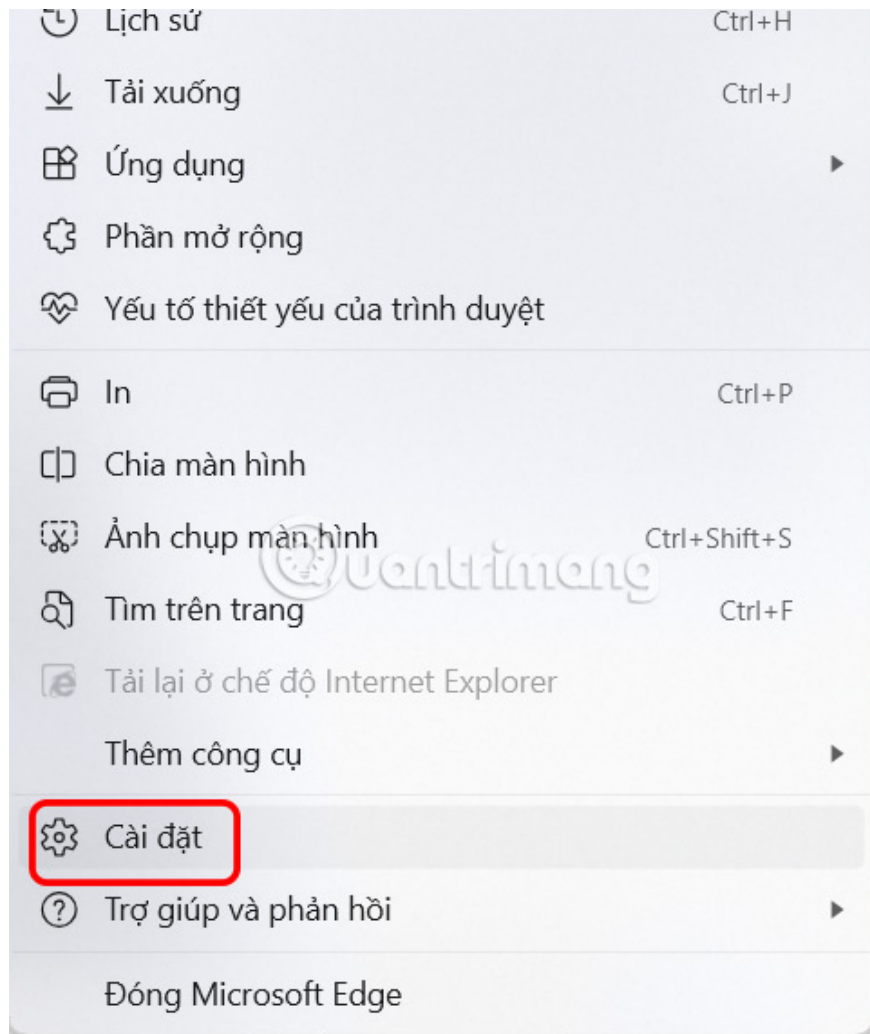

With the option to adjust camera permissions on Microsoft Edge, users can easily change options for websites, thereby ensuring more privacy.

Web browsers all have their own section to manage access rights of websites when used, including camera access rights. With the option to adjust camera access rights on Microsoft Edge, users can easily change the options for websites, thereby protecting their privacy. Below are instructions for blocking websites from accessing the camera on Edge.

How to block websites from accessing the camera on Edge

Step 1:

In the Edge browser, click on **the 3-dot icon and select Settings** in the displayed list.

Step 2:

Switch to the new interface, users click on **Cookies and site access rights** .

Look at the content next to you, find the All permissions group and then **click on Camera** to adjust.

Step 3:

At this point, users will see the interface for adjusting camera access permissions on Edge. First, you need to **enable the Ask before accessing (recommended) setting**. Then any website that wants to use the camera on the browser must send a notification for your approval.

Below is the section to allow and block websites from using the camera on the Edge browser, if any. To remove a website from the list, click on the trash icon to delete it.
