

# Instructions to hide email addresses on iPhone with virtual email

On iPhone with user support to create virtual email, random email addresses and associated with your primary email address

One of the ways to protect your email address and avoid too much email spam is to create a virtual email associated with the real email to send email or to register for services. On iPhone with support for users to create virtual email, random email addresses and associated with your primary email address. Any email sent to a random email address is moved to the primary email address, and you can also delete the random email. The following article will guide you to hide email addresses on iPhone.

## How to hide email address on iPhone

Note, users need to have an iCloud+ account to use the random email generator feature to hide emails on iPhone.

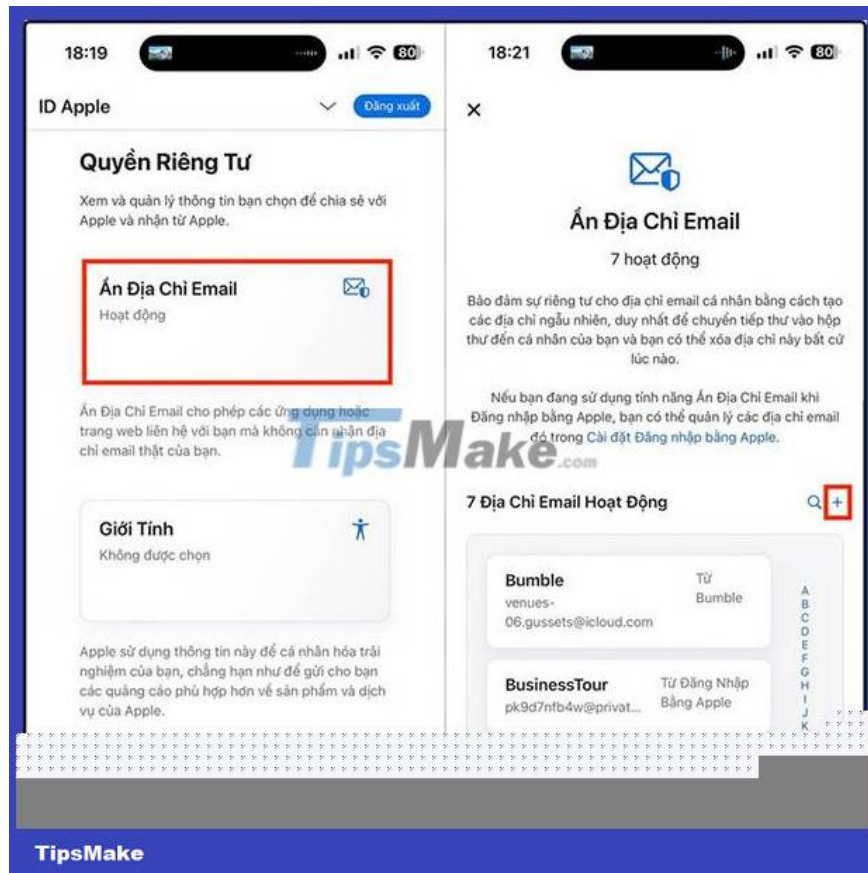

### Step 1:

First, go to iCloud.com on your iPhone browser and log in to your Apple ID account. Next, click on your avatar and then **select Apple account settings** and then select **Privacy** to adjust.

## Step 2:

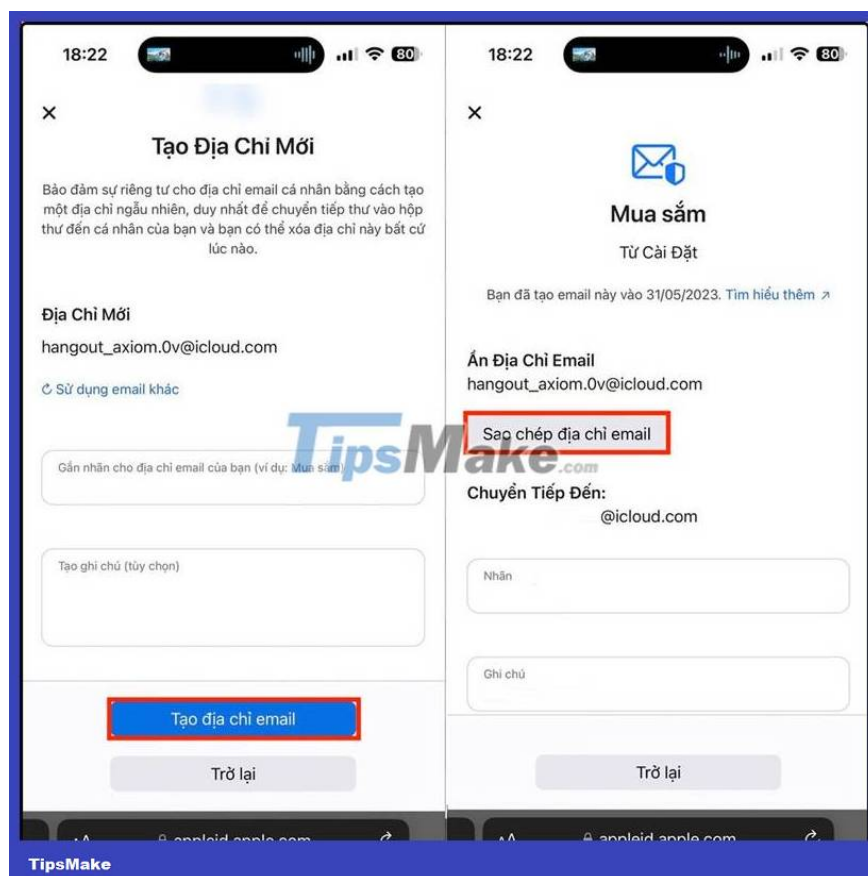

Switch to the next interface, click **Hide Email address** to use this feature. We click on **the plus icon**.

### Step 3:

Now display a random email address for you to use. Below there will be information for you to label this random email address. If you don't like this random email, the user clicks Use another email.

If you want to use this email address, then **click Create email address** . Finally we copy this email address to use.

## Advantages of hiding email addresses on iPhone with random emails

Generating random emails on iPhone helps us hide your real email, but never miss any incoming emails.

Emails sent to a random address will be forwarded to your personal email account: your iCloud email address or any email address associated with your Apple ID. When you reply to a message, your personal email address remains secure.

You can create as many emails as you need. In addition, we can also deactivate or delete the email address we no longer use.
