Instructions on how to increase storage capacity for Android TV Box

According to MakeUseOf, users can upgrade the memory capacity for their Android TV Box with a few simple steps. Because most of today's Android TV devices have at least one USB port and can read / write to external memory devices.

However, by default, Android TV Box will not have access, install applications and games on external memory device, unless you allow in the Settings menu. Specifically, the operations are as follows:

Step 1:

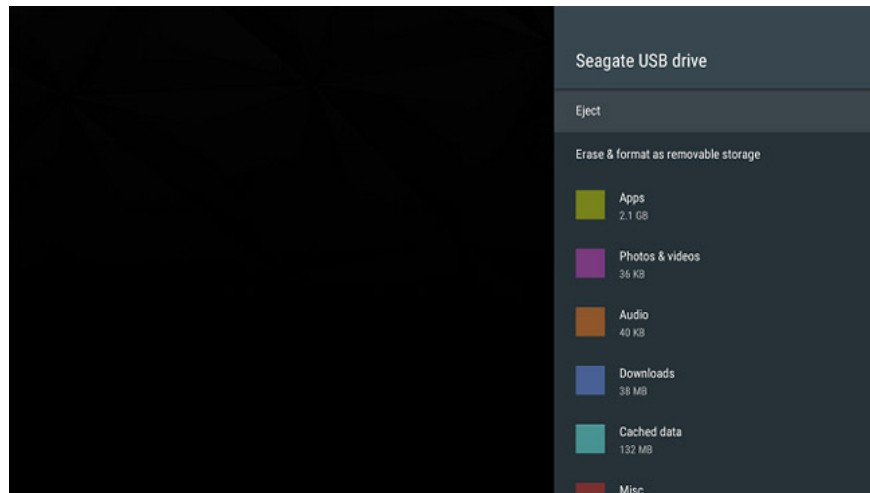

Carry out a USB plug or an external drive into your Android TV device.

Step 2:

At the main screen, search and select *Settings*. Next, navigate to the *Storage and Reset section* and find the correct USB drive that you just mounted in the previous step.

Step 3:

Select *Set up as internal storage* or *Format as device storage*.

Note: Depending on the device you will need to select Move now or not.

Now, you need to wait for Android TV to format your USB and you will be able to forget about Android TV Box's original internal storage. Also note, apply the way to increase internal memory for Android TV Box in this way, you absolutely should not remove the USB, or do not plug it into other devices.

Hope you are successful.
