

Instructions to install driver for Lenovo Laptop by downloading from the homepage

How to update driver for Lenovo laptop? This article I will guide how to install genuine Lenovo computer drivers from the Lenovo homepage

How to update driver for Lenovo laptop? In this article I will guide you how to install genuine drivers from the standard Lenovo home page without any adjustments!

After installing Win, the essential software for your computer / laptop to operate is Driver, in OS versions like Win XP, Win 7 often lack a lot of Drivers.

Fortunately, in Windows 10, the multi-configuration Ghost Win 10 versions are almost fully integrated, but the driver package integrated in it does not always have new and standard drivers, so some lenovo laptops still lack Driver. .

No matter which of the above cases: Using Win Xp, Win 7 - 8 - 10, updating Driver from Lenovo homepage is a very necessary thing. Let's get started right away.

1. What is Lenovo laptop driver?

In the article how to install Driver manually / automatically, I explained the concept of Driver. This software has the same effect on all laptops - pc, it is the bridge between the hardware device and the operating system.

For example , how can the computer control the speakers that make the sound? Control the color display, etc. All operation is possible thanks to the **Driver**.

2. Why and when do I have to install Driver for Lenovo laptop?

Similar to other computers, **Lenovo laptops** also need to install **Drivers** for software and hardware to work together, in short, every **laptop driver** has the same effect.

The only difference between the **Drivers** of laptops is the manufacturer, we already know that the speakers, keyboards, touchpads, etc. of each **laptop** are manufactured differently. Therefore, you can not get **Driver** of this computer -> then install it on another computer. Each computer / laptop will have different hardware, so there will be a different way to install Drivers.

If you want to save time, you can refer to **the automatic driver installation software such** as Wandriver, Driver Booster, etc. They will automatically identify the Driver on your computer, laptop line and install the correct Driver.

These are also Drivers' installation packages that are often integrated into the Ghost Win version I introduced at the beginning of the article, although " **automatic** ", but they are not completely " **genuine** " from the manufacturer. So there will be a few problems such as not identifying the driver, installing the missing or old Driver, etc. Now the standard and safest solution is to **install the Driver from the Lenovo homepage** , let's start the guide right away home.

3. Lenovo laptops

Lenovo is one of the most popular laptops in Southeast Asia, the most prominent being the Lenovo Gaming Legion series - exclusively for gamers. Some prominent laptops in this segment are Lenovo IdeaPad L340 15IRH, Lenovo Legion Y530 81FV008LVN, etc.

In the mid-range segment, Lenovo always launches new products every year for the two lines Lenovo IdeaPad and Lenovo Thinkpad - Mainly serving offices, businesses and learning purposes.

Finally, the cheapest Lenovo is in the Lenovo Essential series, the popular laptop line suitable for novice laptop users who need to work - play lightly.

No matter which Lenovo laptop series you are using, you can apply the driver installation method that I guide below.

4. How to download and install drivers for Lenovo laptops from the homepage

Before you begin, make sure your computer has Microsoft .Net Framework installed! (Version 4.0 and above).

Step 1. Check the **Laptop name** and **Model Name** on the back of the Laptop.
