

Instructions to install Google Photos for computers

Not only is the application on iOS and Android, Google Photo also has a computer version to automatically back up all photos and videos in the designated folders. We will guide installing Google Photos for computers in the article below

The Google Photos service, a cloud storage of all photos and videos of a Google account, can be gathered from various sources such as YouTube or Google+.

Besides 15 GB of free storage, or infinite capacity, provided that photos will have to be tweaked, the most interesting thing about Google Photos is that users can find photos in stock with technology. image recognition. For example, you can retrieve photos in London even though the title and photo description do not have London keywords, but because Google identifies the landscape in London .

Not only is the application on **iOS** and **Android** , Google Photo also has a computer version to automatically back up all photos and videos in the designated folders. We will guide installing Google Photos for computers in the article below

Step 1 : Go to download **Google Photos address** and select **Uploader for Desktop (Desktop Uploader)**

Step 2: You will download an installation file. Open the installation file and then click **I Agree** to start the process of installing Google Photos

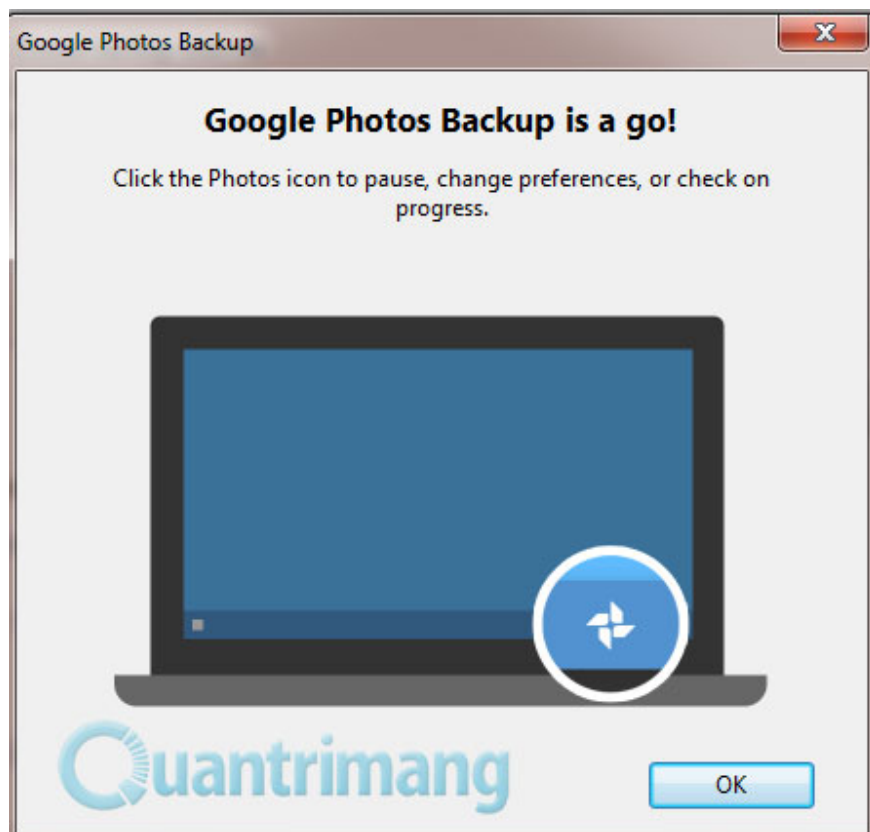

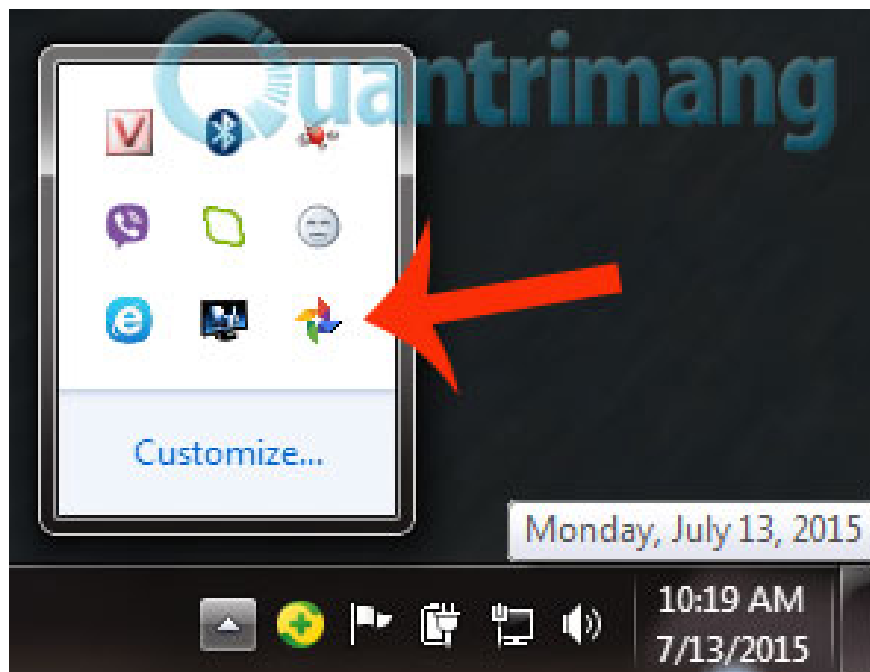

Step 3 : First, you need to login your Gmail account. Then, go to the settings section, bookmark which folders you want your photos and videos to automatically backup to Google Photos, and click **Add** to add a folder if you want. You can also mark an infinite amount of power, but the image will be tweaked, or 15GB of original image. You can also unmark the usage habits statistics to Google, then click *Start backup*

Step 4 : Click **OK** when being guided by Google Photos

Step 5 : Once Google Photos is activated, you can click on **the Google Photos icon** in the **Taskbar** with many different options.
