

Instructions to livestream playing games on Nonolive using PC

Nonolive is a popular game livestream website that provides high quality and live streaming channels for gamers. This is a platform where everyone can enjoy all the famous games like Free Fire, LOL, PUBG, Minecraft, Call of Duty: Mobile, etc.

Most of the Esports tournaments are usually live on Nonolive and viewers also receive a lot of interesting gifts while these tournaments are taking place.

If you are intending to start with streamer work, everyone can refer to Nonolive to fulfill their wishes. This article will show you how to livestream on Nonolive using PC.

Instructions to livestream on Nonolive using PC

First, everyone needs to [download OBS Studio](#), which is suitable for your PC's operating system.

OBS Studio supports the following operating systems:

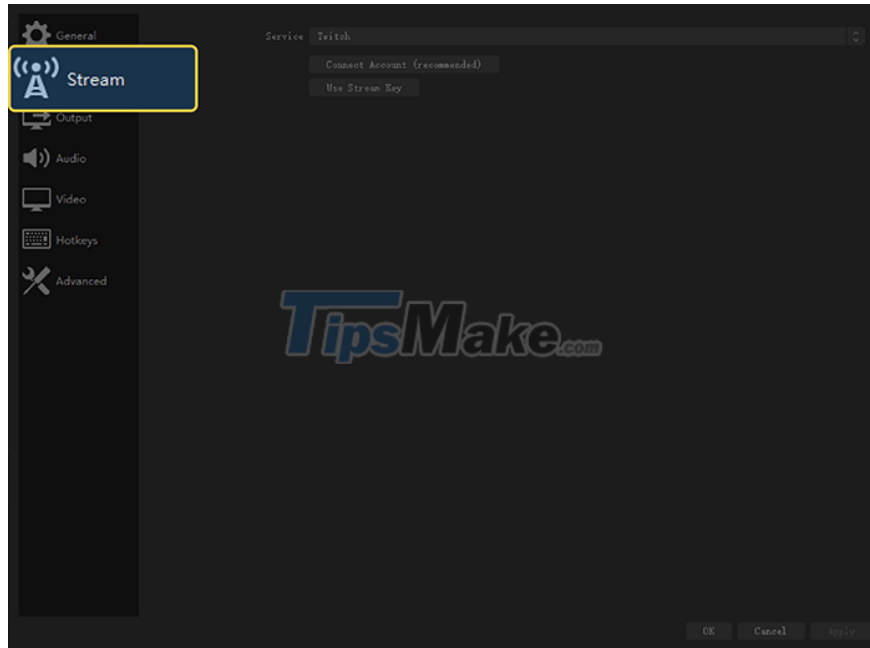

1. Windows: Windows 7 or later; DirectX 10.1 compatible GPU.
2. MacOS: Intel CPU (no PPC support); OpenGL 3.2" compatible GPU
3. Linux/Unix: OpenGL 3.2 compatible GPU; X Windows System.

Setup steps

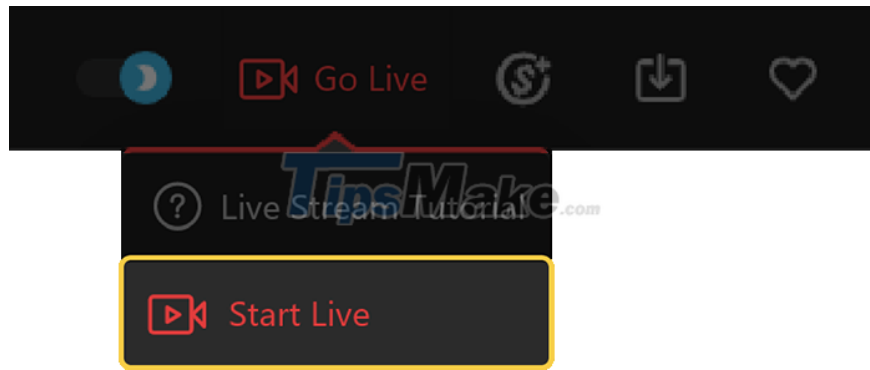

Step 1: Open OBS Studio and click the Settings button at the bottom right of the main screen.

Step 2: After opening Settings, click Stream.

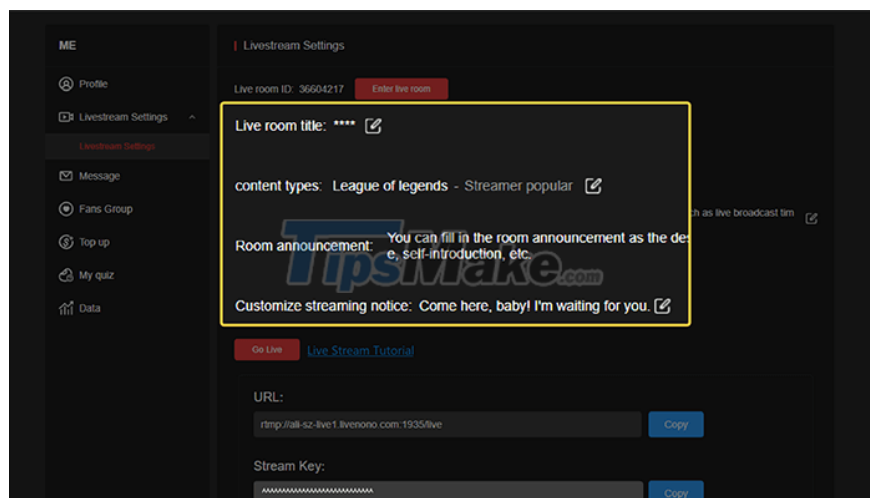

Step 3: Start the browser, visit the official website of Nonolive, then log in and click the Start Live Broadcast button.

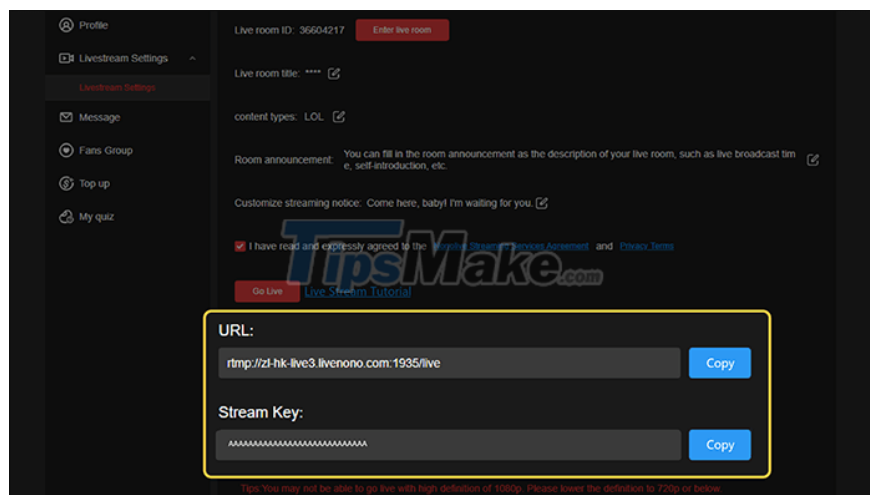

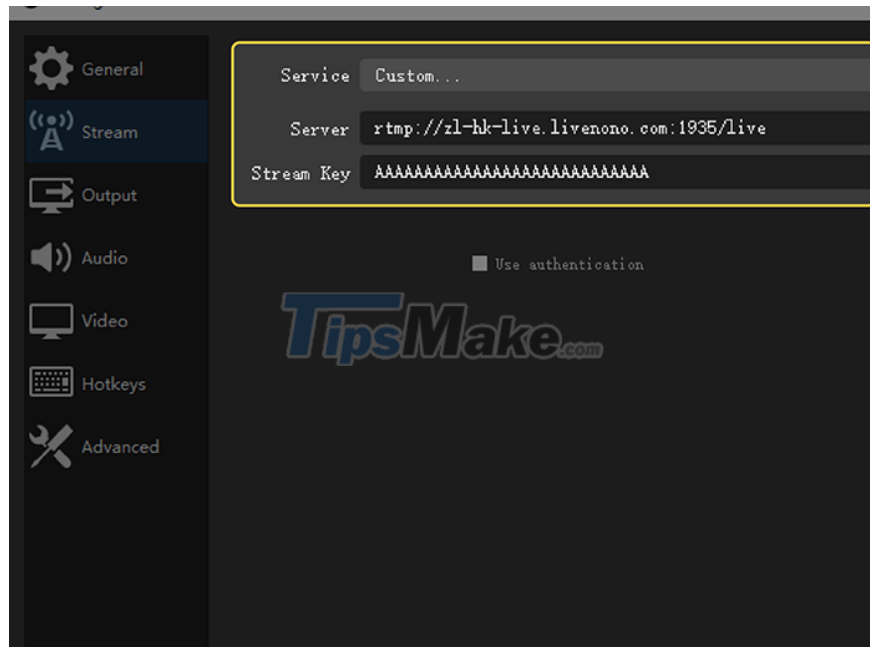

If you haven't created an account, people won't be able to access your live stream settings, so sign up for a new account.

Step 4: Fill in information about the stream (stream content, introduction, .).

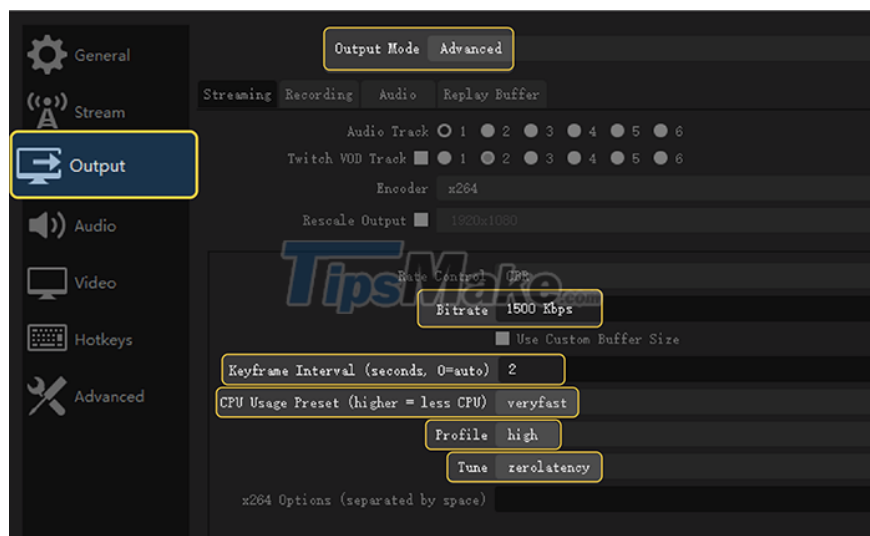

Step 5: Copy the URL and Stream Key respectively and paste them into Settings/Stream of OBS Studio.

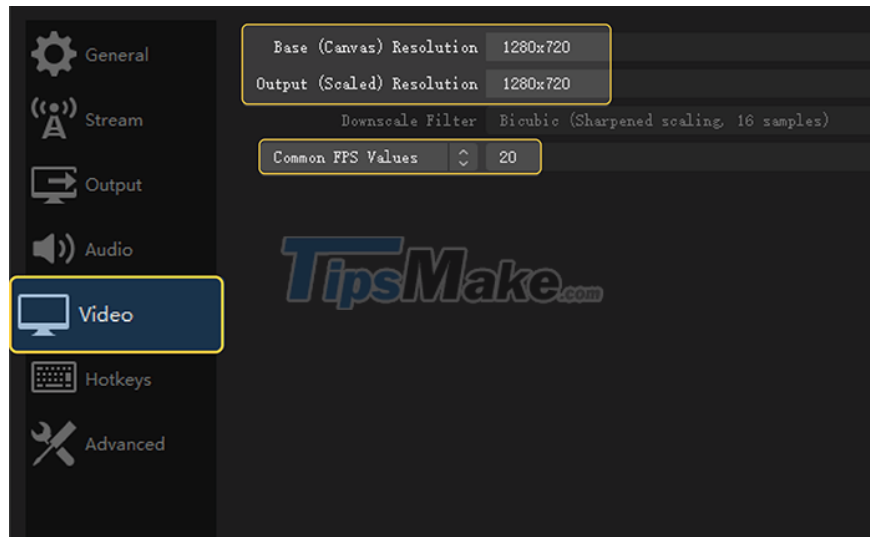

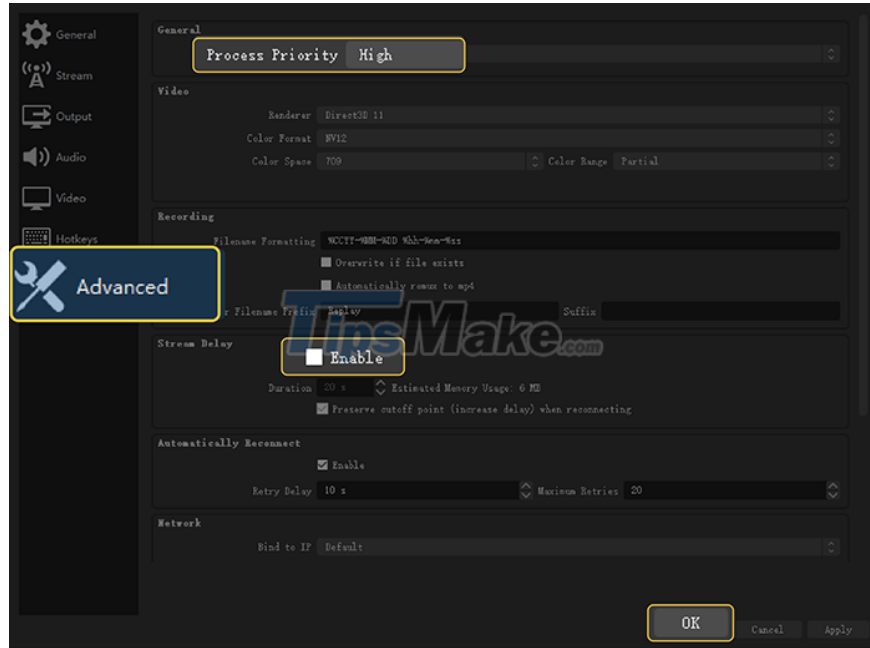

Step 6: Click Output and select Advance in Output Mode, then set as shown in the image below.

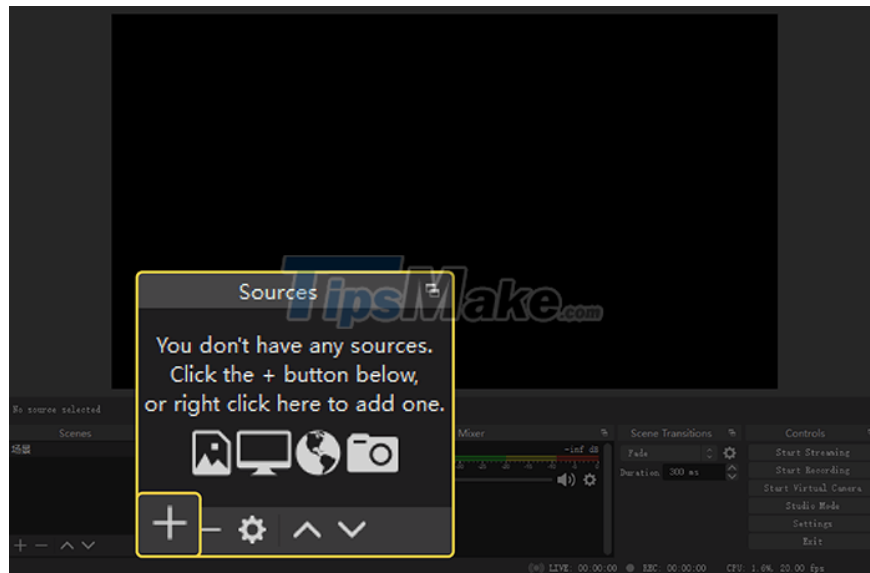

Step 7: Select Video and then set as shown in the image below.

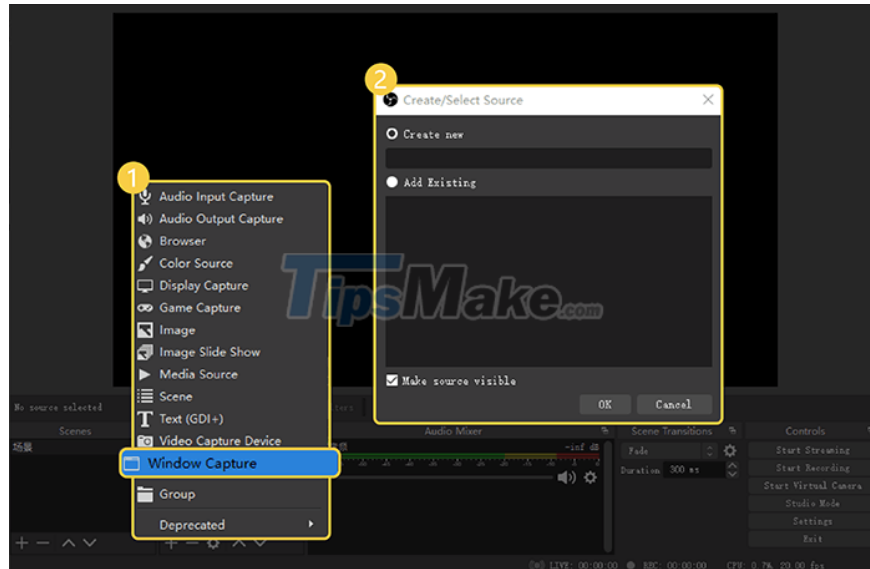

Step 8: Click Advance, then set Process Priority to High; next, make sure that the Stream Delay box is unchecked; After completing the installation, click the OK button.

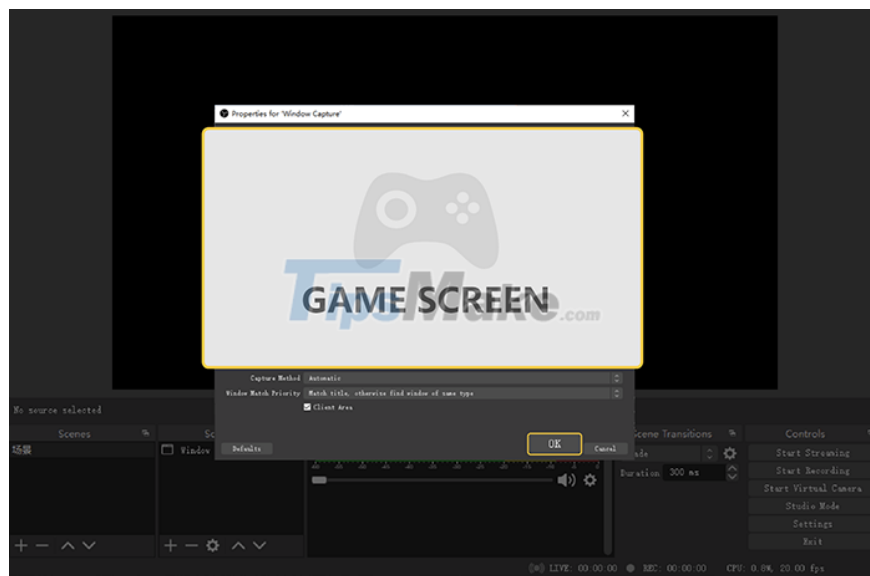

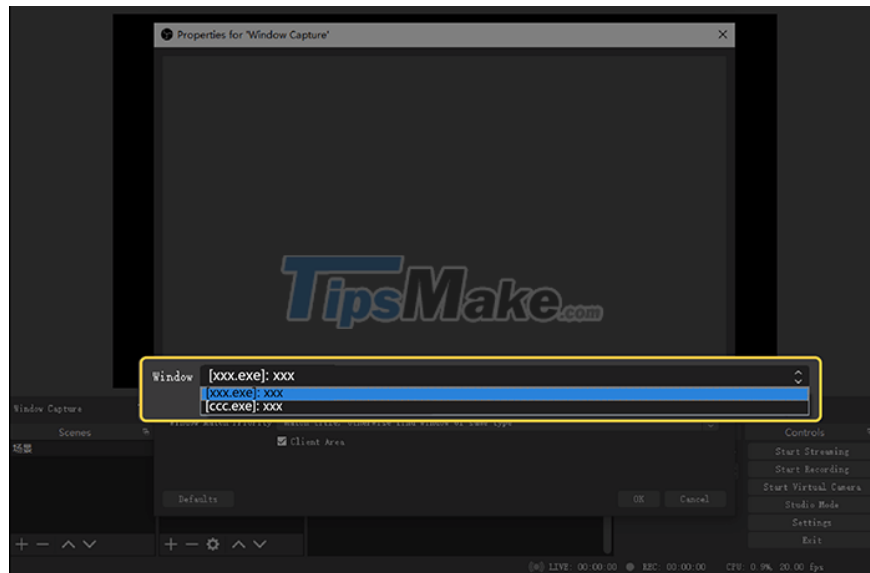

Step 9: Go back to the main screen, add a source and click the + button.

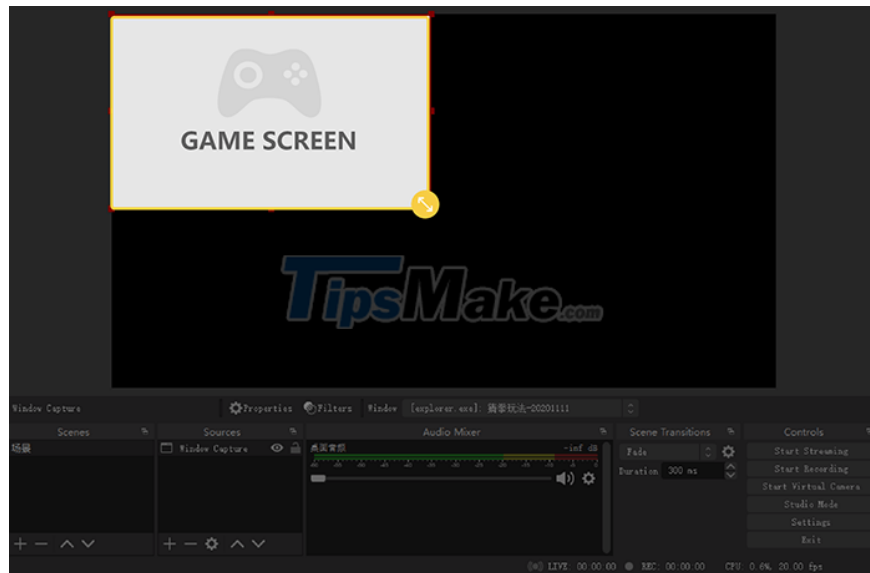

Step 10: Select Window Capture and click the OK button on the new screen that appears.

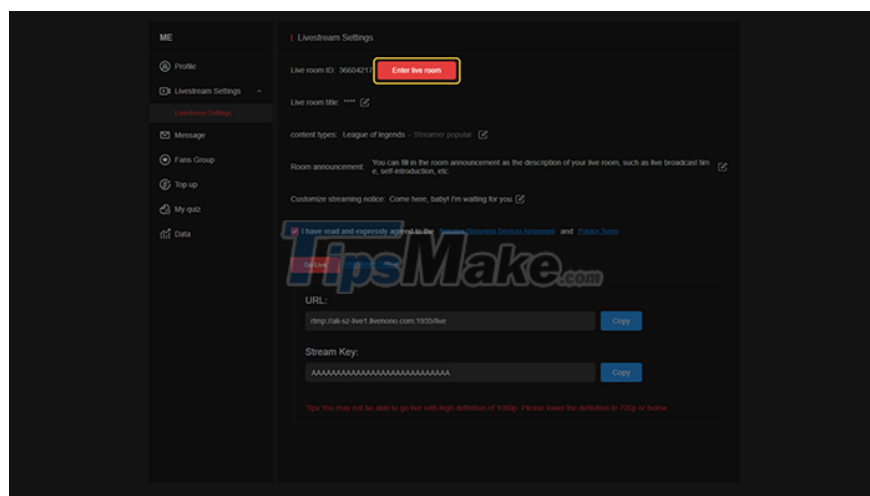

Step 11: Click the arrow button on the right side of the window option, then select the window you want to use, select Match title, otherwise find the same type of window in the Window below, then click the OK button.

Step 12: Adjust the selected window, click on a corner of the window, then drag it to enlarge. After the adjustment is complete, move the livestream screen to the upper left.

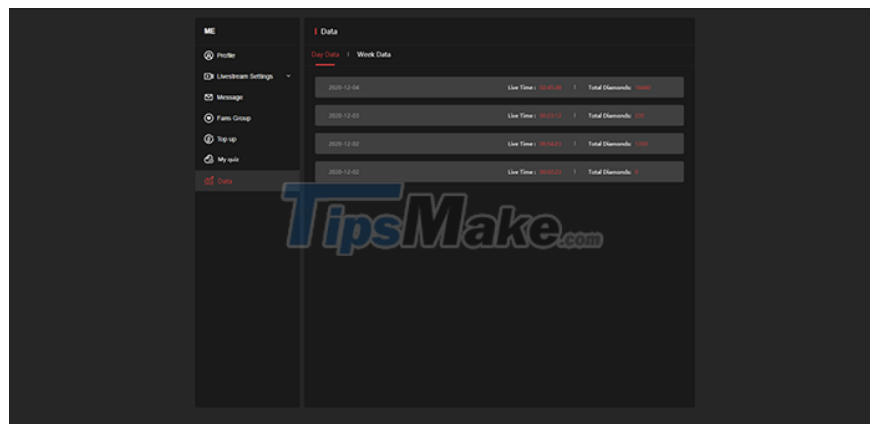

Step 13: Click Start Streaming to start the livestream.

Step 14: Click the Stop Streaming button at the bottom right of OBS Studio to end the livestream.

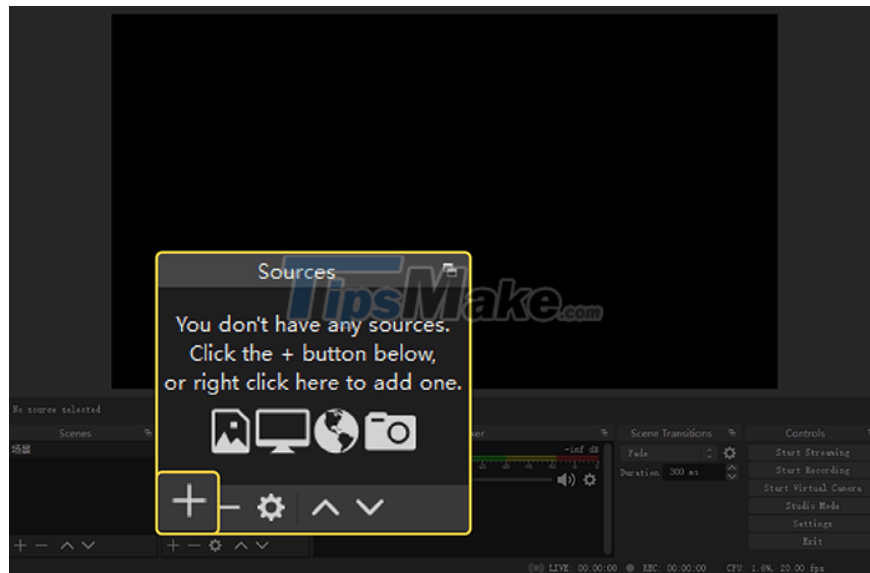

Step 15: If you want to see the data about the livestream after it ends, click on the data in the Personal Center.

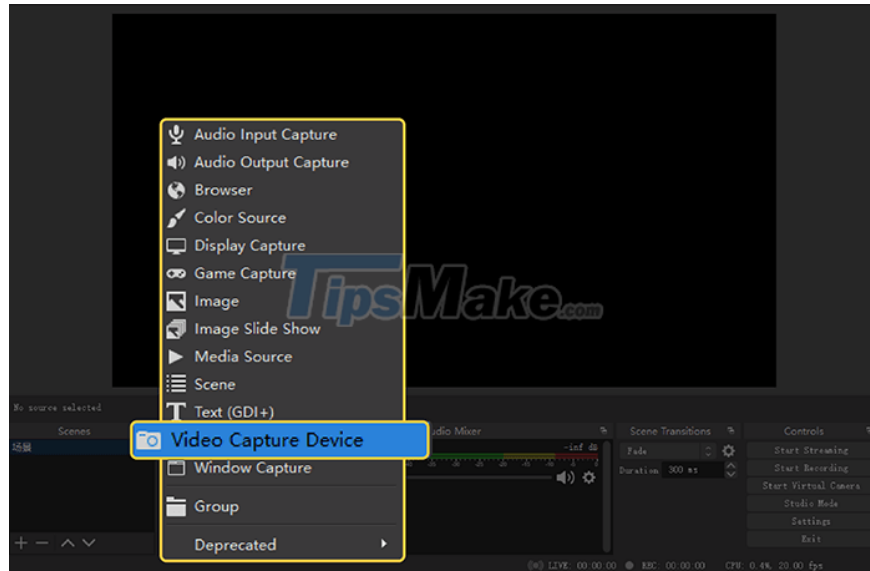

How to set up the camera

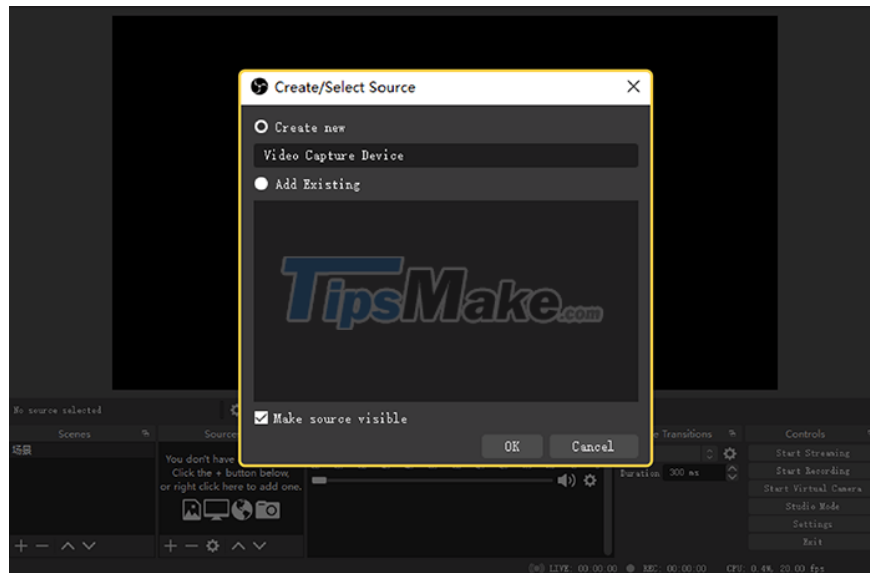

Step 1: Click the button + home screen.

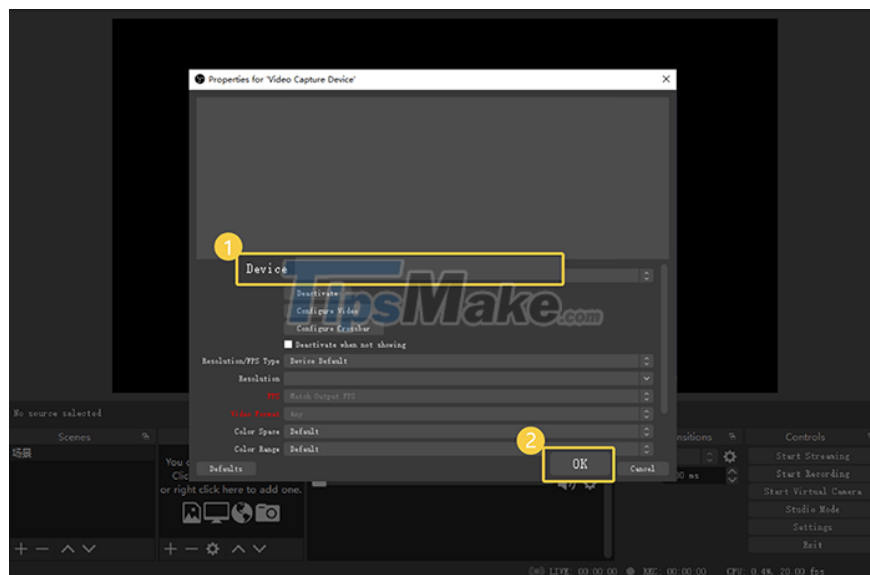

Step 2: Select Video Capture Device.

Step 3: On the newly created window, give it an arbitrary name, then click the OK button.

Step 4: Click the arrow button to the right of the device option, then select the device related to the camera. After confirming that the image is displayed, click the OK button.
