

Instructions to play WiFi with iPhone / iPad

With an iPhone or iPad phone connecting to WiFi you can completely turn them into free WiFi hotspots to your computer, or laptop. You will not have to install any programs that are fully editable on the device.

To turn a laptop into a WiFi broadcast phone for a phone or a computer, there are quite a lot of support software such as playing WiFi on a laptop using Wi-Host or using mHotspot to turn a computer into a WiFi transmitter. So can we use smartphones such as iPhone for WiFi to other devices?

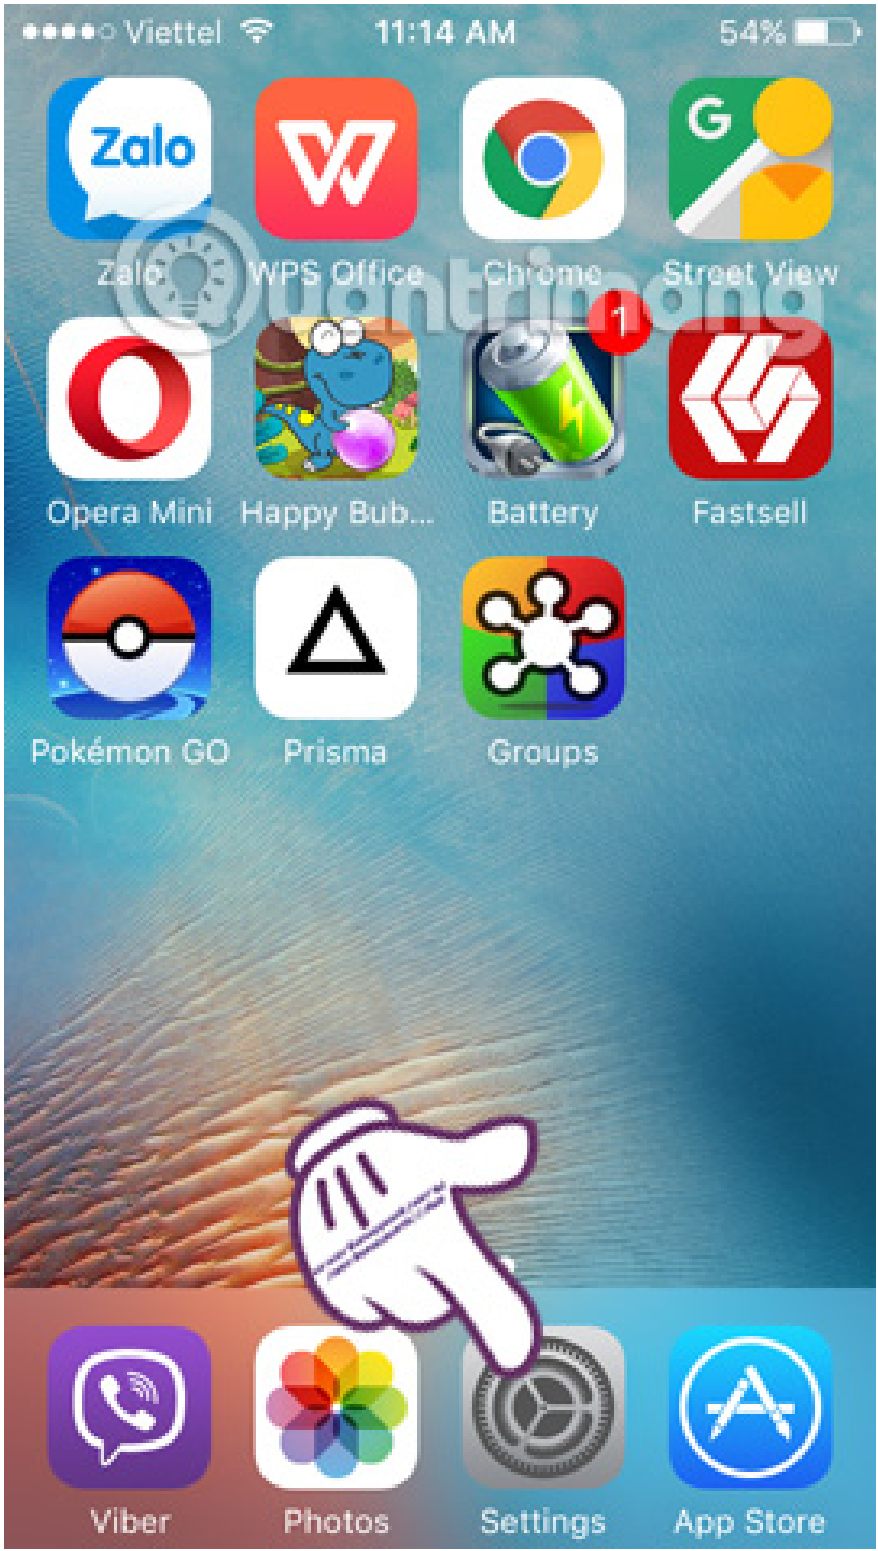

The answer is yes. With the iPhone or iPad in hand, you can use them to create WiFi hotspots. In particular, we will not have to install any other support applications such as on the computer, but can completely set up right on the device. Other laptops or smartphones can access WiFi waves that are broadcast from the iPhone, saving for flickering network situations or losing WiFi.

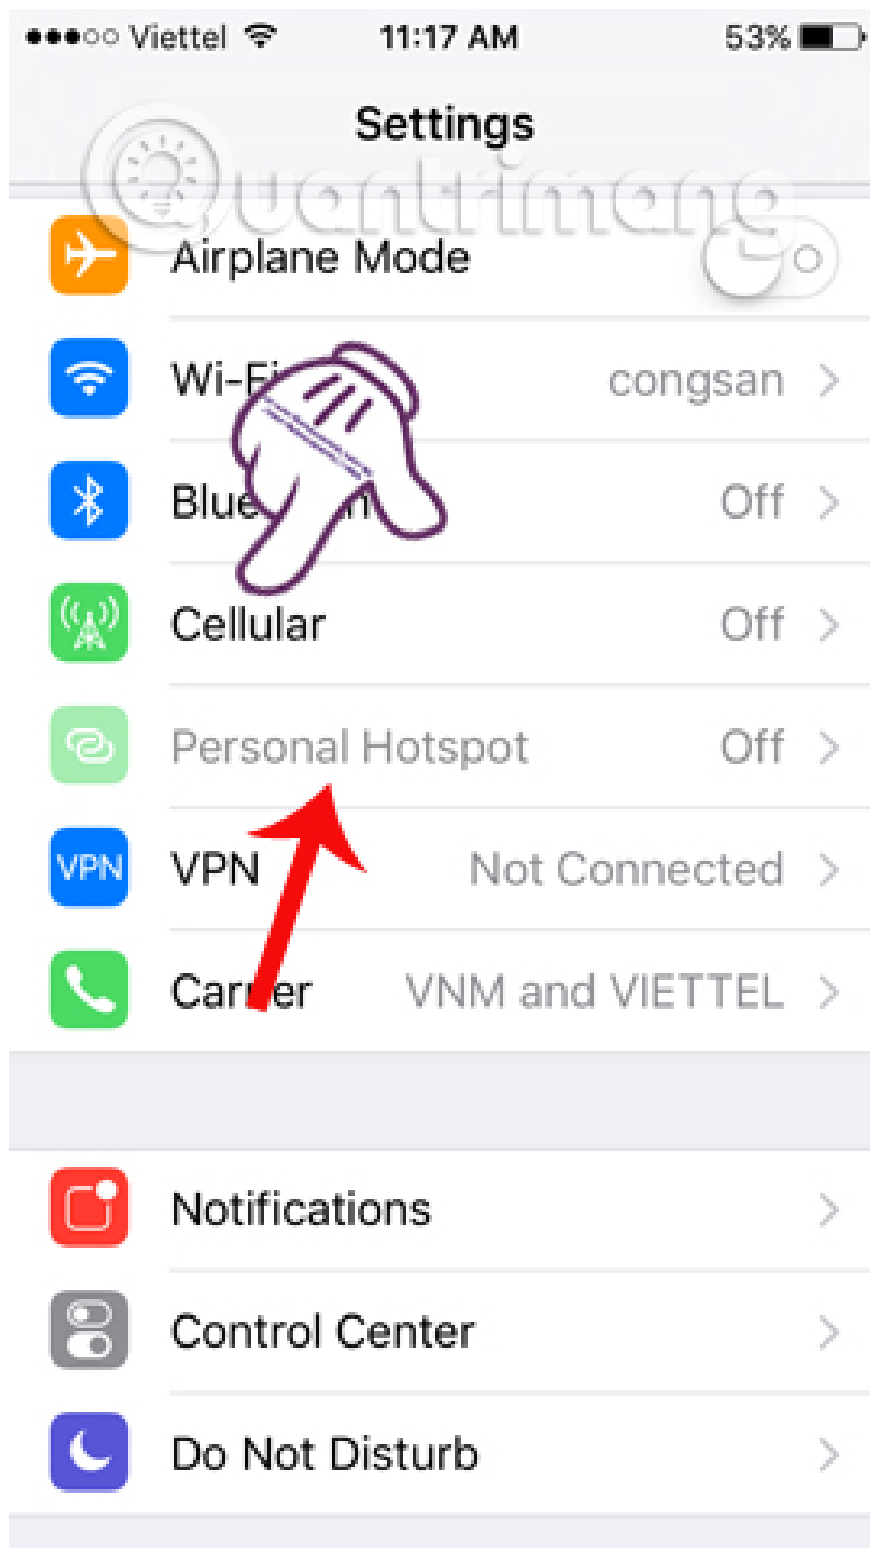

How to turn iPhone into WiFi hotspot

Step 1:

At the main screen interface of the device, select **Settings** . In that interface, we will click **Personal Hotspot** .

Note, if the machine does not press the Personal Hotspot item, select Cellular (Mobile).

Step 2:

In the Cellular interface, in the **Cellular Data** section, we **push the horizontal bar to the right** to activate this feature. Also at that interface, click on **Personal Hotspot**.

Personal Hotspot

Turn on Personal Hotspot to share your iPhone's Internet connection. Additional usage charges may apply. Other devices signed into your iCloud account will be able to use Personal Hotspot without having to turn it on manually.

Wi-Fi Password

tamtamchuz >

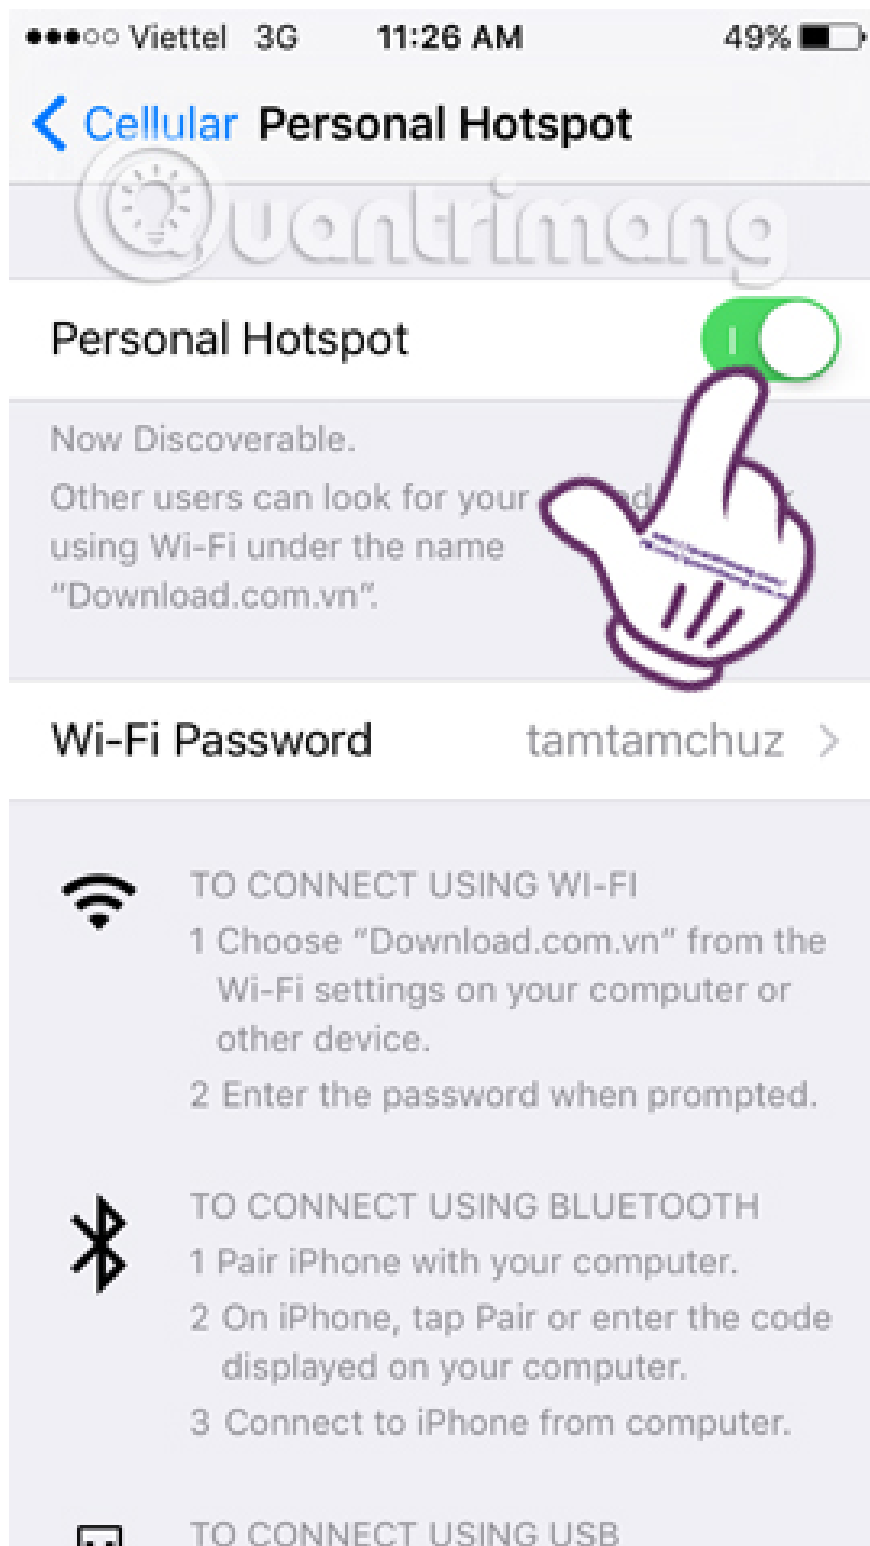

TO CONNECT USING WI-FI

- 1 Choose "Download.com.vn" from the Wi-Fi settings on your computer or other device.
- 2 Enter the password when prompted.

TO CONNECT USING BLUETOOTH

- 1 Pair iPhone with your computer.
- 2 On iPhone, tap Pair or enter the code displayed on your computer.
- 3 Connect to iPhone from computer.

Step 4:

Next, also in this interface, we click the **Wi-Fi Password** section and set the password for the network you want to create to play. Click **Done** .

TO CONNECT USING WI-FI

1 Click on "Download.com.vn" from the list of networks on your computer or mobile device.

2 Enter the password when prompted.

TO CONNECT USING BLUETOOTH

1 Pair iPhone with your computer.

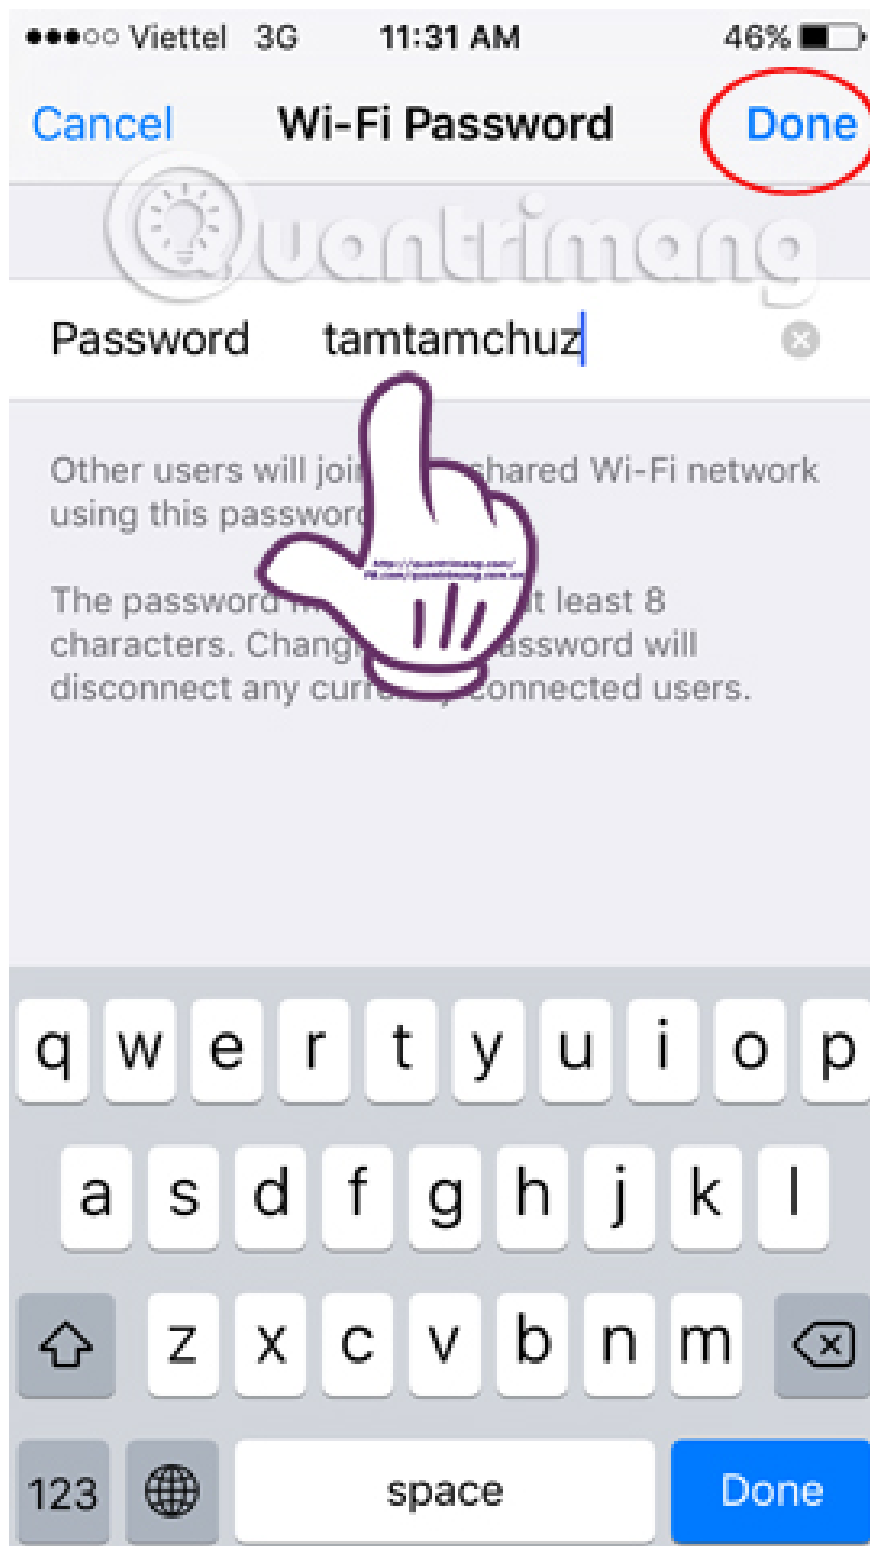

2 On iPhone, tap Pair or enter the code displayed on your computer.

3 Connect to iPhone from computer.

TO CONNECT USING USB

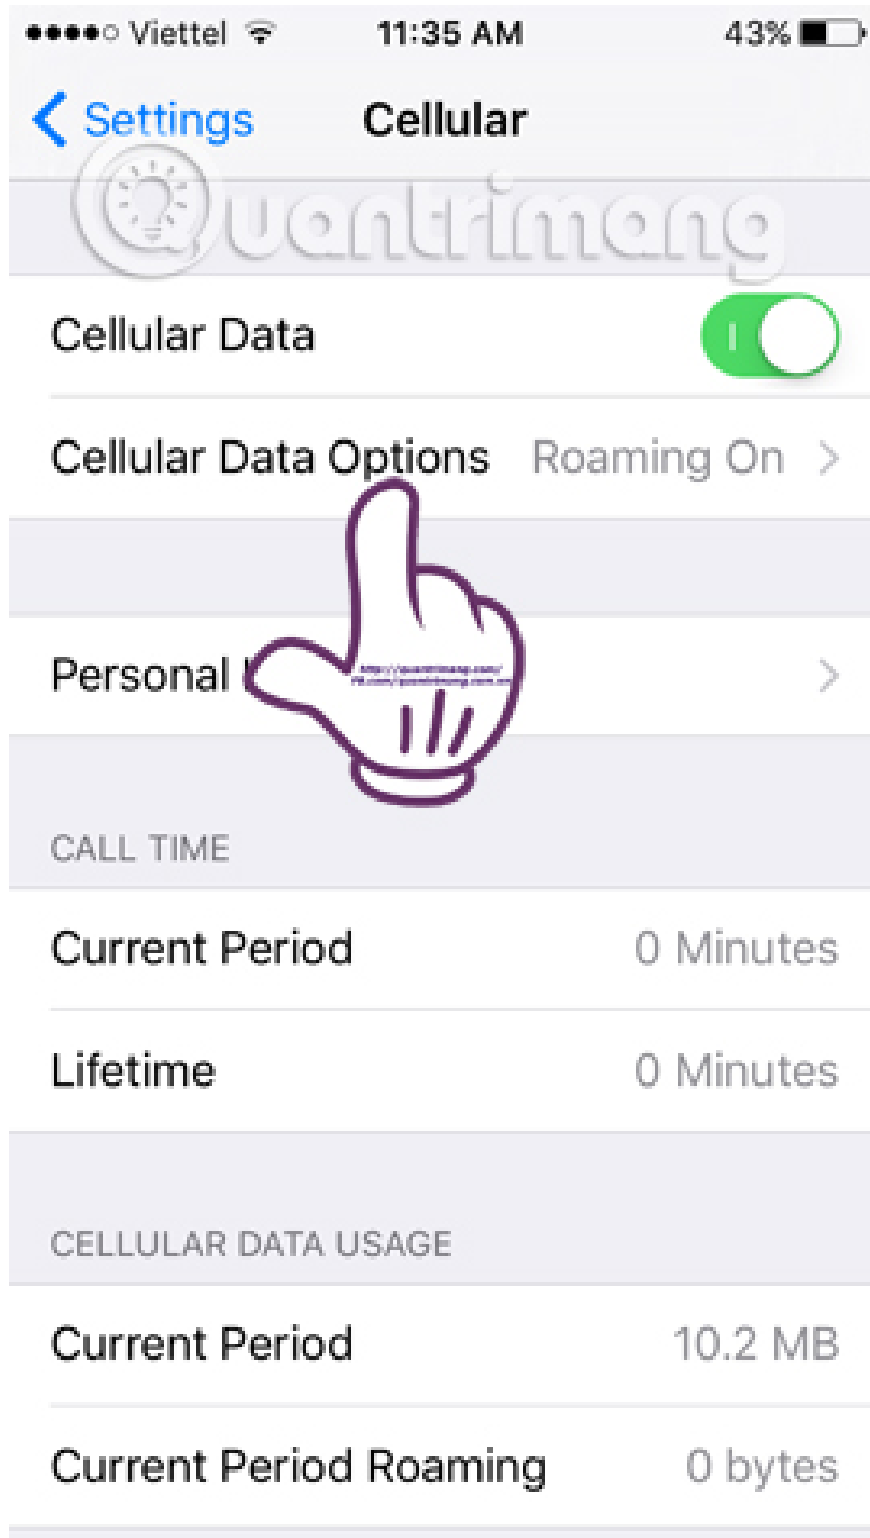

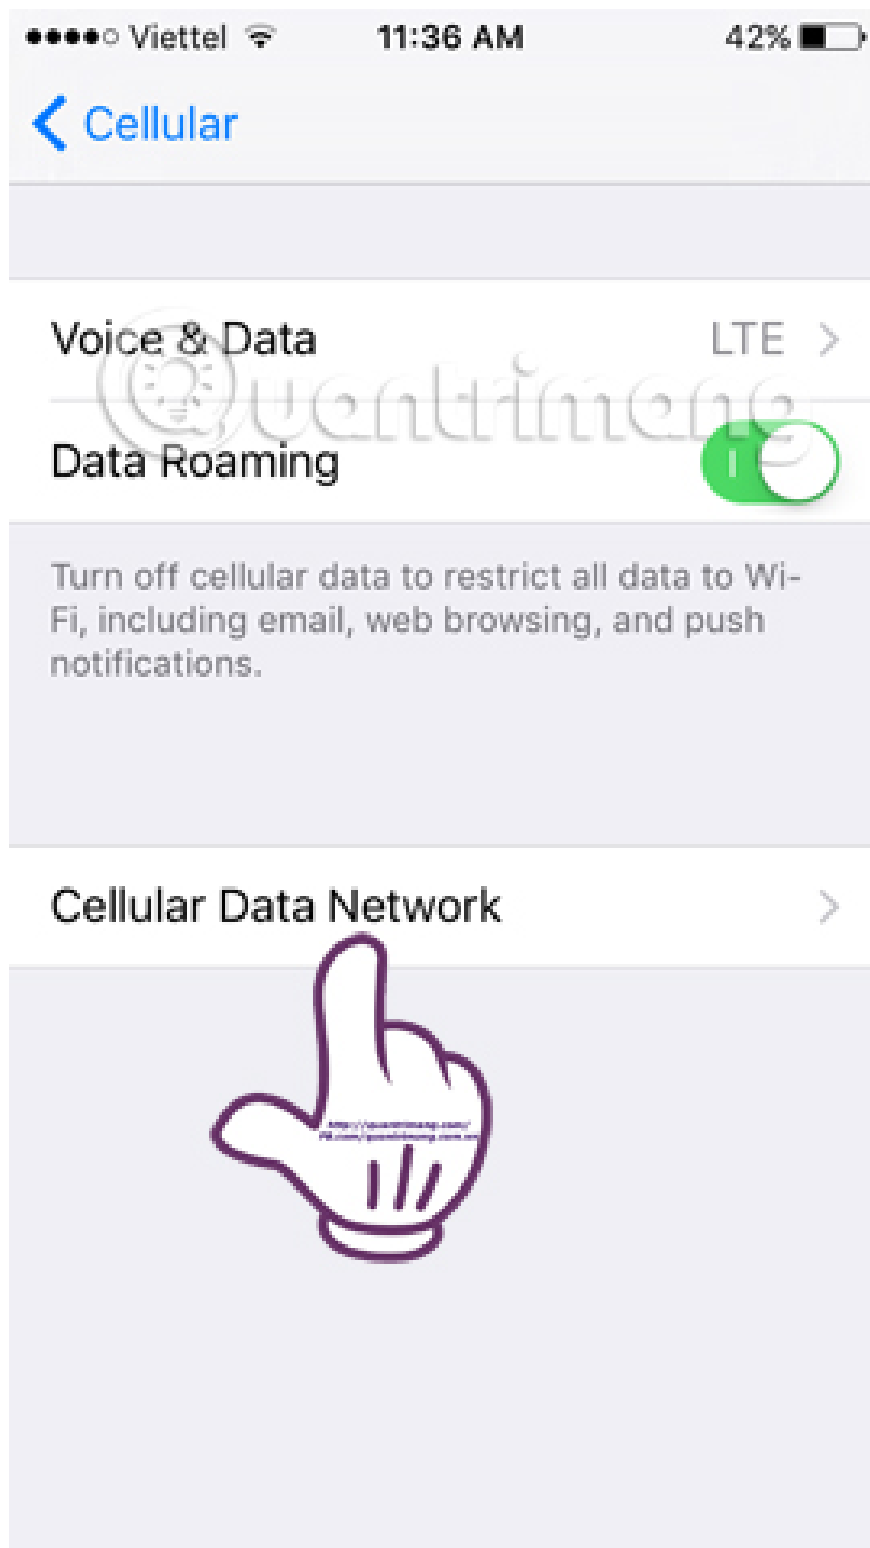

Step 5:

We return to the Cellular section interface and click the **Cellular Data Options** item. In the new interface, there are 2 parts:

1. **Voice & Data** : Data usage.

2. **Cellular Data Network** : Set up general information.

Click Cellular Data Network, we **enter information into the Personal Hotspot section** . Then Go back to **Voice & Data section select LTE** .

Step 6:

Immediately your iPhone / iPad has become a WiFi hotspot already. If any device is accessed, there will be information and the number of devices using that WiFi network appears on the screen. Now you can use your phone or laptop and access the WiFi network from iPhone / iPad.

Thus, with just a few simple editing operations, your iPhone has become a wireless hotspot for other devices. From now on, if your computer has a problem and cannot catch WiFi or phone in the situation of flickering WiFi waves, please use the iPhone / iPad device to become a free WiFi hotspot.
