

Instructions to practice typing with Typer Shark Deluxe game

Typer Shark Deluxe is a game to kill sharks and practice typing with 10 fingers and learn English vocabulary.

Typer Shark Deluxe is an intellectual game that helps players both entertain and practice fast 10-finger typing as well as increase English vocabulary. In Typer Shark Deluxe, players will play the role of a diver and must dive deep under the sea in search of long-buried treasures. The biggest obstacle players face is the ferocious sharks that are always waiting to attack the divers.

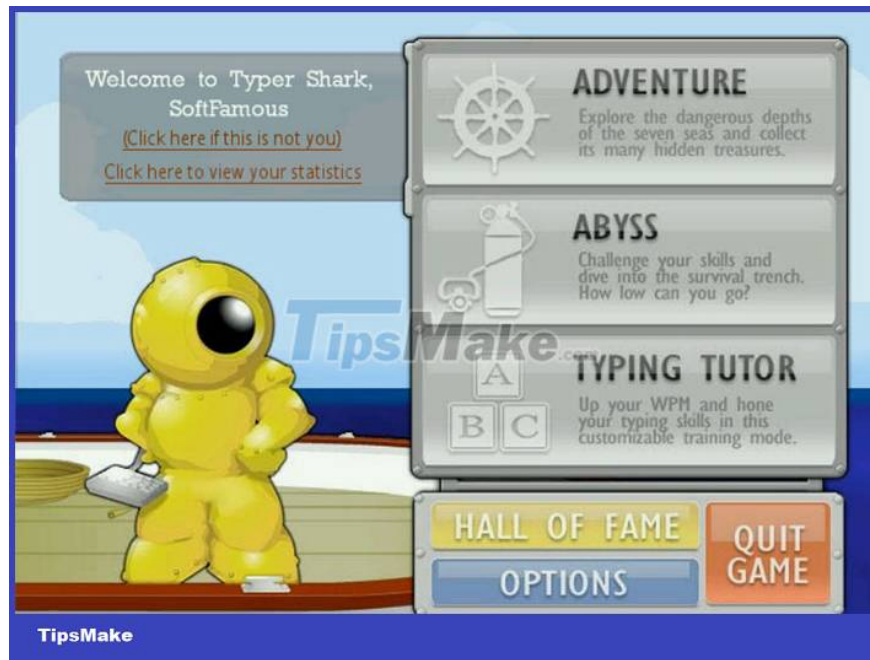

To avoid being attacked by sharks, players will have to type quickly and accurately the words that appear on the shark's body to destroy them. The game seems simple, but as each level increases, the word length increases and the movement speed of the sharks also increases, making the game very difficult to pass. People just type wrong or don't type all the words, the shark will eat the divers right away.

Let's discover how to play and challenge in Typer Shark Deluxe to have fun and learn typing and vocabulary effectively.

Practice typing with Typer Shark Deluxe game

Level of the game

There are three play options in this educational typing game. These modes will show difficulty, which is unlocked after the player completes the typing skill assessment. Slower typists will have the game adjust to their skills. The words are not difficult in different modes and the sharks come at a slower speed.

1. ABYSS mode: Everyone will practice their typing skills through a treasure hunt and shark slaying game
2. Adventure Mode: Same as ABYSS mode but with more advanced difficulty.
3. Tutorial Mode: This mode will familiarize players with the keys and teach them how to type with 10 fingers in the most scientific way. After learning how to type, players will learn how to type 10 fingers with text.

The deeper you dive, the more difficult the difficulty increases

The first option of the game is the challenge mode, where the player will have to dive to about 280 feet and face sharks of varying difficulty. The deeper you dive and the further you go in the game, the difficulty of the sharks will be determined. The first sharks require only short, simple words, and later, more dangerous fish such as

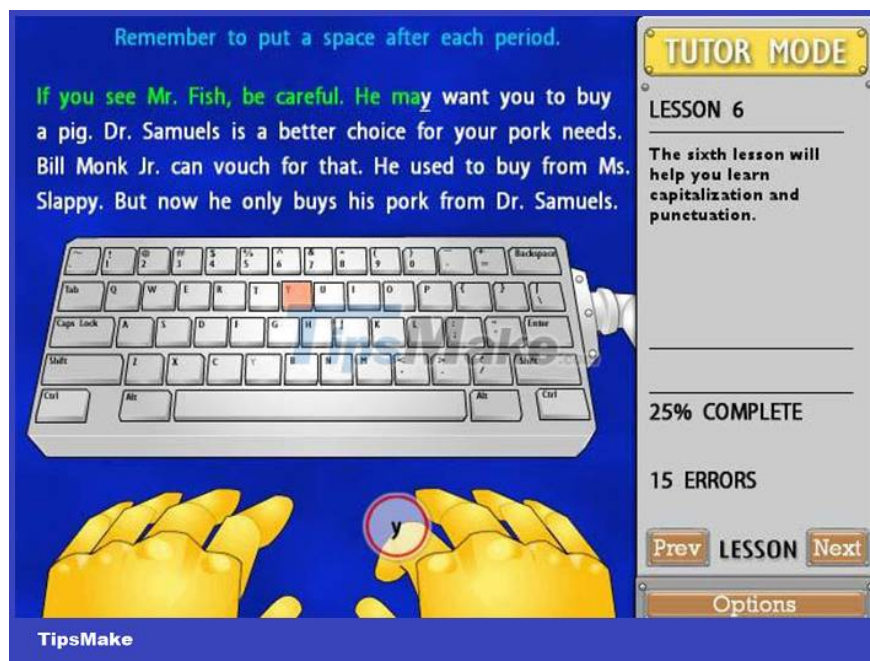

hammerhead sharks, which will require many long, difficult words.

Dive until you lose

The second game mode, Deep ABYSS, is similar to the first except that everyone has to dive 280 feet until they lose. The difficulty the sharks create will change each time the diver deepens. In terms of gameplay, there will not be a big difference between these two game modes.

Typing tutorial mode

The third game mode Tutor makes a difference, perfecting your typing by improving accuracy and speed. In this mode, everyone will do various exercises to build their typing ability. Players can repeat a row or alternate between letters. These exercises are designed to improve memory related to typing.

The only limitation of this mode is the amount of instruction information. Instead of teaching the essentials of typing, the game just gives exercises without much explanation. If the teaching element were stronger in this mode it would be a huge improvement, making this game much more useful.

Overall, Typer Shark is a great educational typing game because players can forget that they are actively studying because they have to focus on fighting the sharks and improving their scores. This game is for anyone who wants to improve their typing skills. This would be a perfect game for the home computer as it is educational and improves the typing skills of not only kids but adults as well.
