

# Instructions to record screen with VLC Media Player

Instructions for recording the screen with VLC Media Player, Instructions on how to record the computer screen with VLC Media Player without installing any other software.

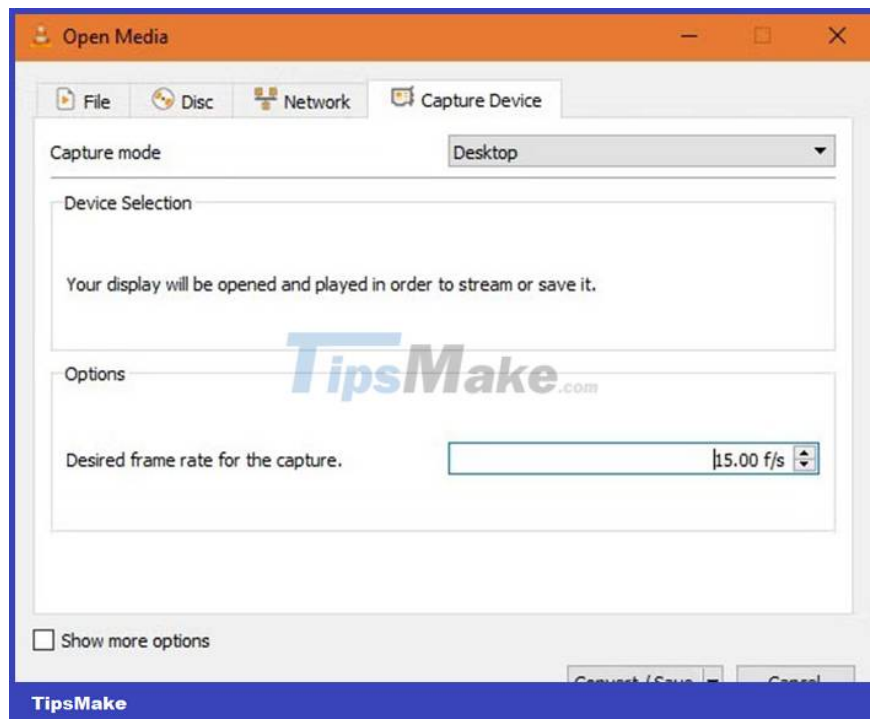

VLC Media Player is a popular media player with many unique features. However, many people do not know that it is also capable of recording screen videos. Very useful feature for those who want to record the scene of their favorite game or the steps of a problem,. In this article, let's learn how to record the computer screen using VLC Media Player without installing any other software.

## How to record screen with VLC Media Player

Step 1: Open VLC Media Player by searching for it in the Start menu.

Step 2: Click the Media tab on the toolbar and select Convert/Save.

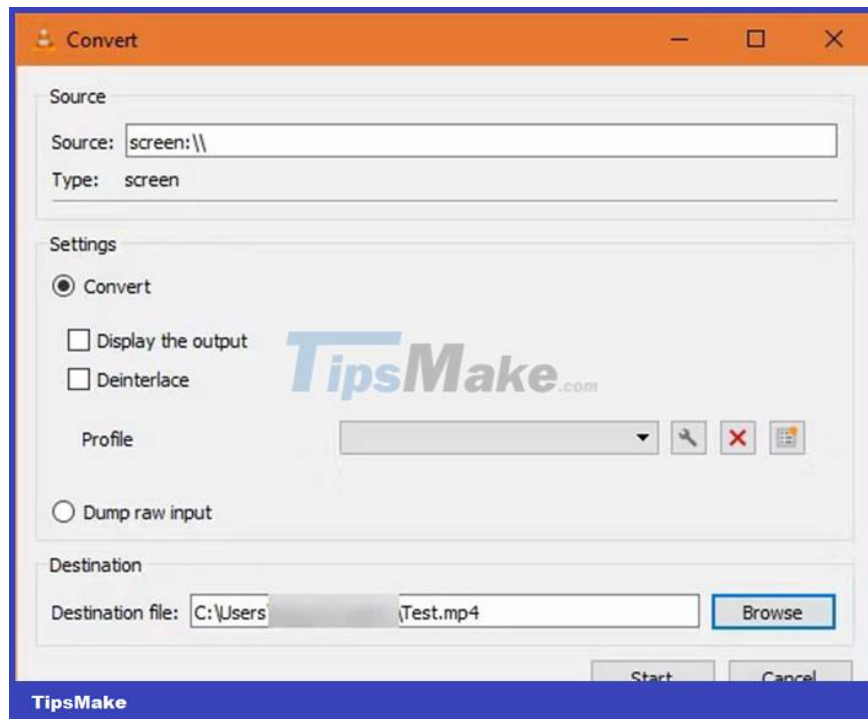

Step 3: Switch to the Capture Device tab. Here, change to Capture mode in the drop-down box.

Step 4: Set the number of frames per second in the Desire frame rate box. For basic screen recordings, 15FPS should work fine. If you need high quality video, choose 30FPS. Higher frame rate means smoother video but larger file size.

Step 5: Click the Convert/Save button to open the next dialog box.

Step 6: Select Browse next to the Destination File box and choose where to save the screen recording.

Step 7: Click Start when done with this to start recording the screen. VLC Media Player will record everything on the screen without showing any indication of this process.

Step 8: To stop screen recording, click the Stop button on VLC's interface and it will automatically save the file. Everyone will find it waiting in MP4 format at the previously specified location.

That's all it takes to record the screen quickly with VLC Media Player. While it doesn't offer advanced features like dedicated recording, it is easy to use. Users can now share content on their screen at any time without using their phone's camera anymore.
