

# Instructions to remove fake security program Cyber ??Security

In essence, this is a copy of the Total Security rogue program, and it's not too hard to remove

**Essentially, this is a copy of the Total Security rogue program, and it's not too hard to remove** . The purpose of counterfeit software is phishing, causing users to believe in bogus warnings about the status, the number of viruses, spyware, malware . in their computers. If you look closely, you will see that it has the same interface as Total Security, only slightly different in the trace file. When operating in the background, the program will display an interface similar to the default application of Windows Security. When the user clicks on the icon, the program will immediately display a very authentic Microsoft-style bulletin board and recommend that Cyber ??Security be updated. And then ask the user to buy the license to activate the program license. As they proceed to update the program, viruses, trojans and spyware will race to the user's computer.

## **Some expressions of the computer have been infected with Cyber ??Security**

- Always show serious results about the security situation of the computer
- Automatically activate scan mode when the system starts
- The warning icon always appears in the system tray
- Popup window and homepage address always point to fake application's website
