

Instructions to resize Slide pages in PowerPoint

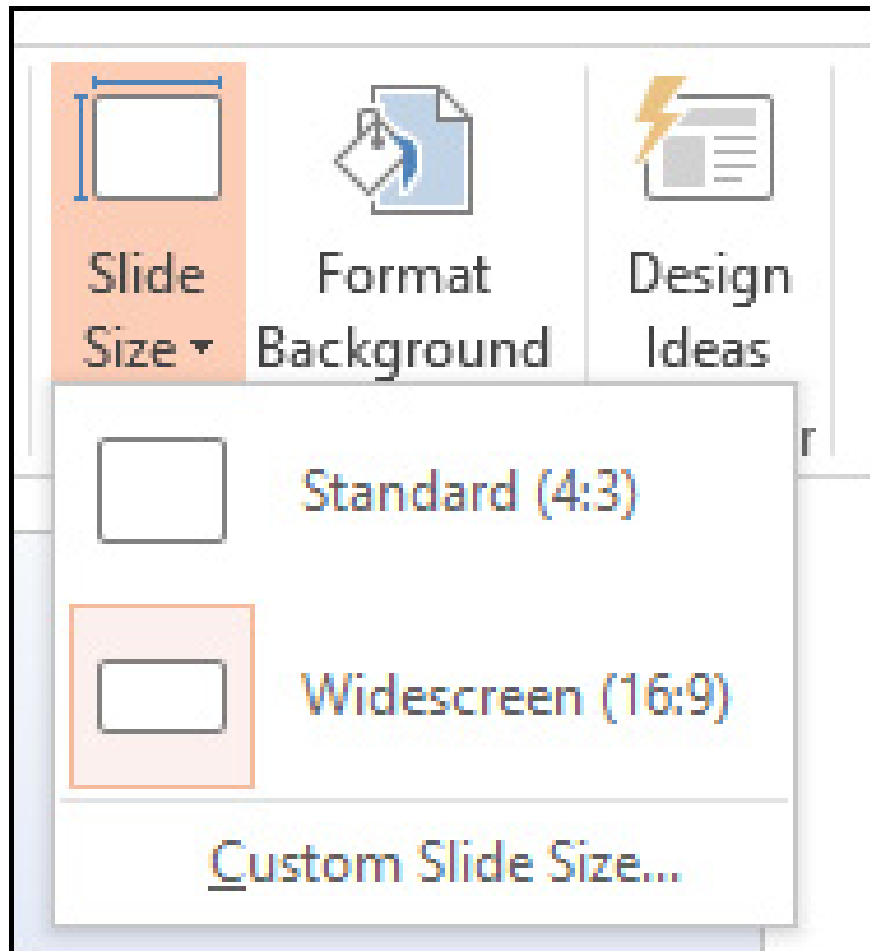

PowerPoint is one of the useful Microsoft Office applications when you need a presentation, but do you know all of its features? Have you ever needed to change the slide size in PowerPoint? In this article, TipsMake.com will guide you how to do it!

PowerPoint is one of the useful Microsoft Office applications when you need a presentation, but do you know all of its features? Have you ever needed to change the slide size in PowerPoint? In this article, TipsMake.com will guide you how to do it!

Change the slide frame rate in Powerpoint

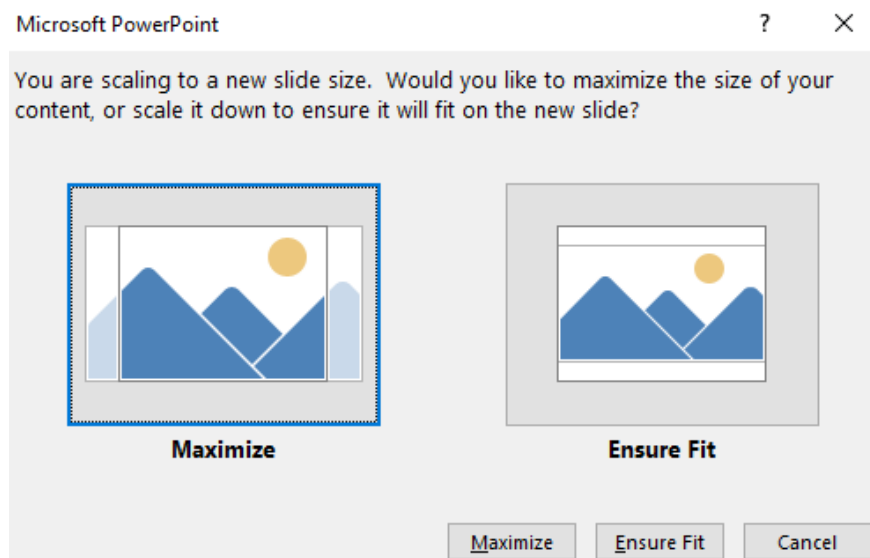

PowerPoint makes it easy to move between 2 common 4: 3 and 16: 9 aspect ratios. Before following this tutorial, you need to make sure you are using Normal view. Access **View> Normal** to check. Now perform the following steps to change the aspect ratio:

1. Use the ribbon bar (menu bar), then open the **Design** tab .
2. On the right hand side of the ribbon, click **Slide Size** .
3. Then select **Standard (4: 3)** or **Widescreen (16: 9)** .

If PowerPoint can't expand your content, it will give you 2 choices:

1. **Maximize:** This option will increase the size of your slide content but may result in loss of images when the content size increases.
2. **Ensure Fit:** This option can re-size the content but make sure you don't lose anything.

Customize slide sizes in PowerPoint.

If you plan to use your presentation with a non-standard installation, you will want to create custom slide sizes for the slide. Follow the steps below:

1. Using the ribbon bar, open the **Design** tab .
2. To the right of the ribbon bar, click **Slide Size** .
3. After that, select **Custom Slide Size** .
4. Enter the ratio you want in the pop-up window.
5. Finally, click **OK** to save the changes.

Note: If you want normal slide sizes, not 4: 3 or 16: 9 (eg Letter, Legal, A4, .), you can make changes in the drop-down box in **Slides sized for**.
