

# Instructions to restart iPhone when the device hangs

When you are using applications, suddenly everything stops, the machine does not respond to your request, the best way you should do is: restart the computer. When this problem occurs, normally just restarting everything will work again as usual. Please follow the instructions below

When you are using applications, suddenly everything stops, the machine does not respond to your request, the best way you should do is: restart the computer. When this problem occurs, normally just restarting everything will work again as usual. Please follow the instructions below

1. How to recover data on iPhone?
2. Summary of good tips for iPhone (Part 1)
3. How to backup data on iOS?

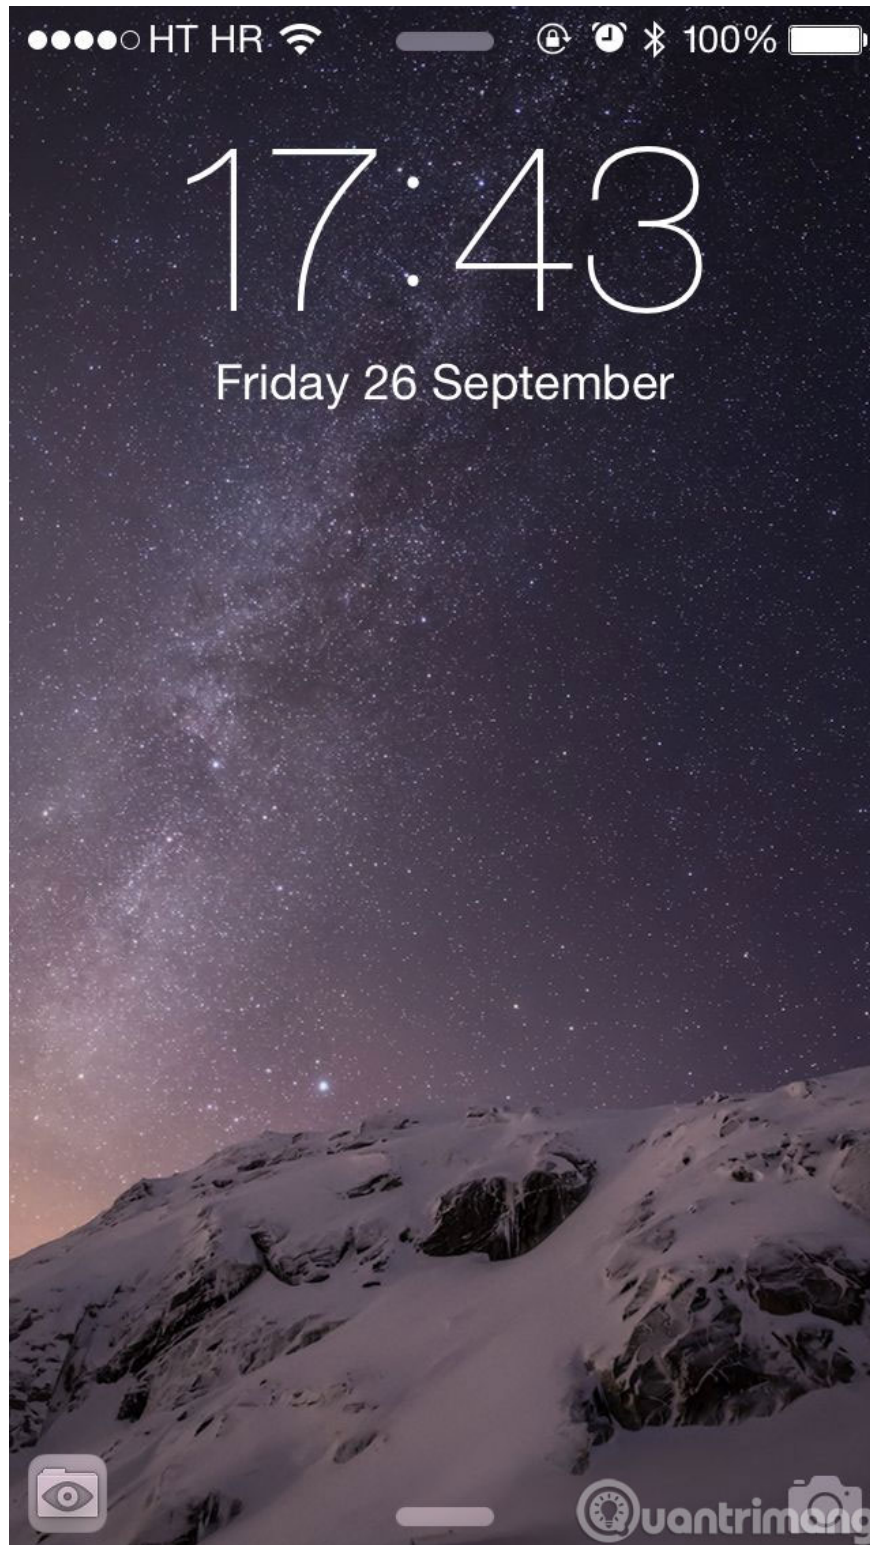

**Step 1** : You press and hold the **Power** button and the **Home** button continuously until the screen turns white

**Step 2** : Continue to keep these two buttons until you see the Apple logo appear

**Step 3 :** You release your hands from these two buttons

After a few seconds, the iOS operating system will boot up and everything will work properly.

Force restart is a good choice when the machine has problems but if the machine has frequent problems, you should restore the iPhone or iPad using iTunes to stabilize the operation of the device. Also, you should not restart the iPhone or iPad too much to damage the hardware of the device. You should only perform this operation when there are no other options available. Please restart the computer only when the device is frozen

and although you have waited for a while, it does not return to normal operation. Do not create bad habits just by seeing the slow computer is immediately restarted or restarted when not needed.

**Good luck!**
