

Instructions to turn on positioning on iPhone

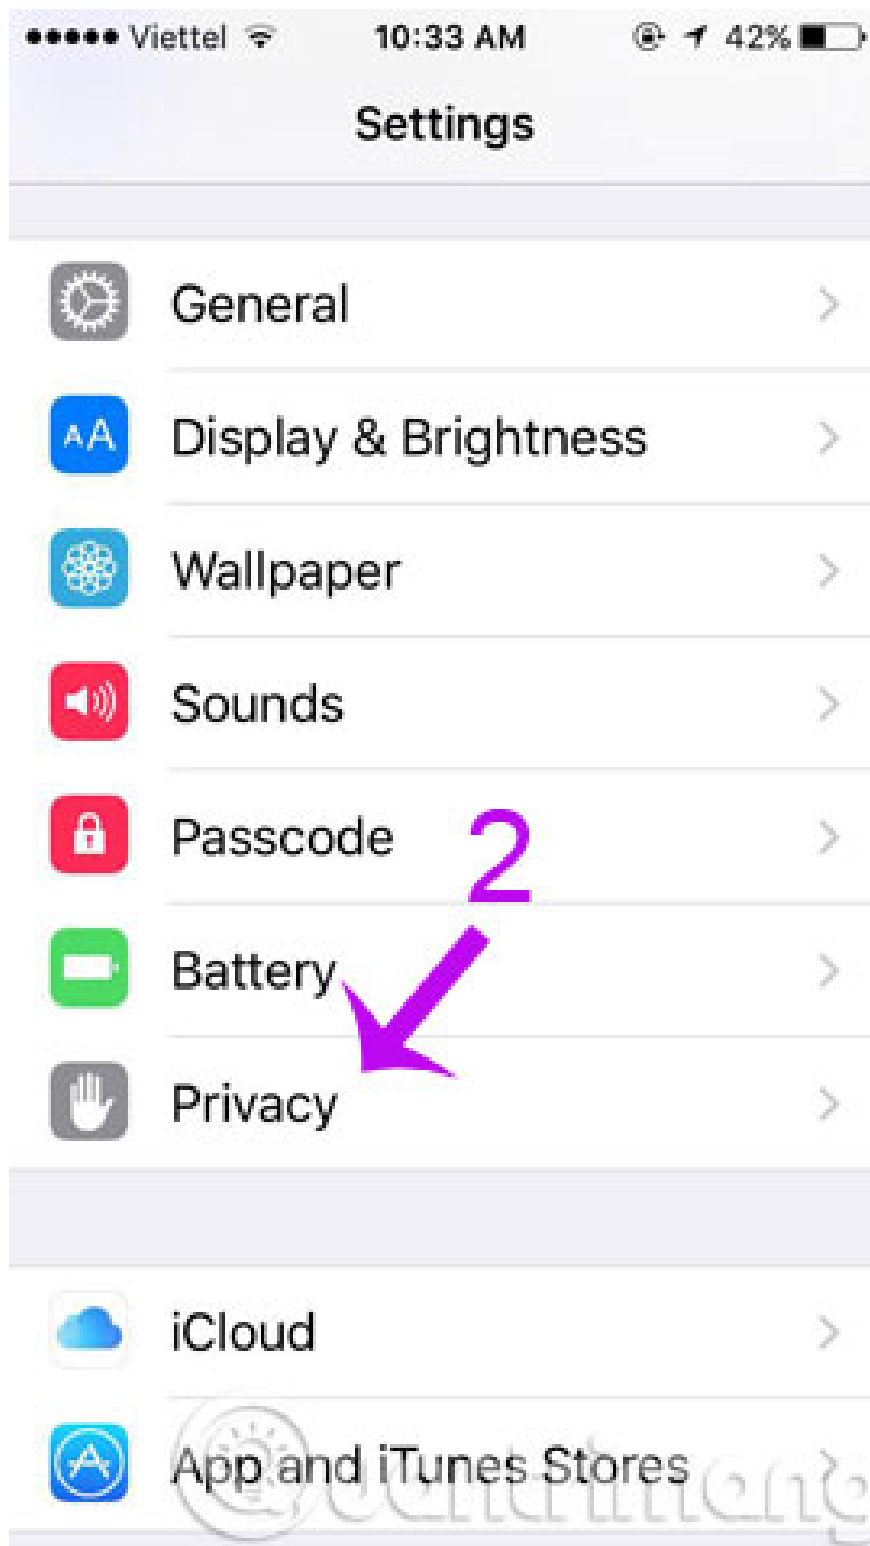

Positioning is an indispensable function on smartphones in general, iPhone in particular, with this feature you can know where you are on the map, effectively using the directions feature of the map and body application location, location when chatting and many other practical applications.

Positioning is an indispensable function on smartphones in general, iPhone in particular, with this feature you can know where you are on the map, effectively using the directions feature of the map and body application location, location when chatting and many other practical applications.

But not everyone knows how to activate this function, if you don't know, please refer to our article below.

Step 1 : From the main screen of the iPhone, you select **Settings** > **Privacy**

Step 2 : In the **Privacy** section, you select **Location Service** and turn on **On** mode (the button turns green as shown below).

< Settings Privacy

Location Services Off >

Contacts >

Calendars >

Reminders >

Photos >

Bluetooth Sharing >

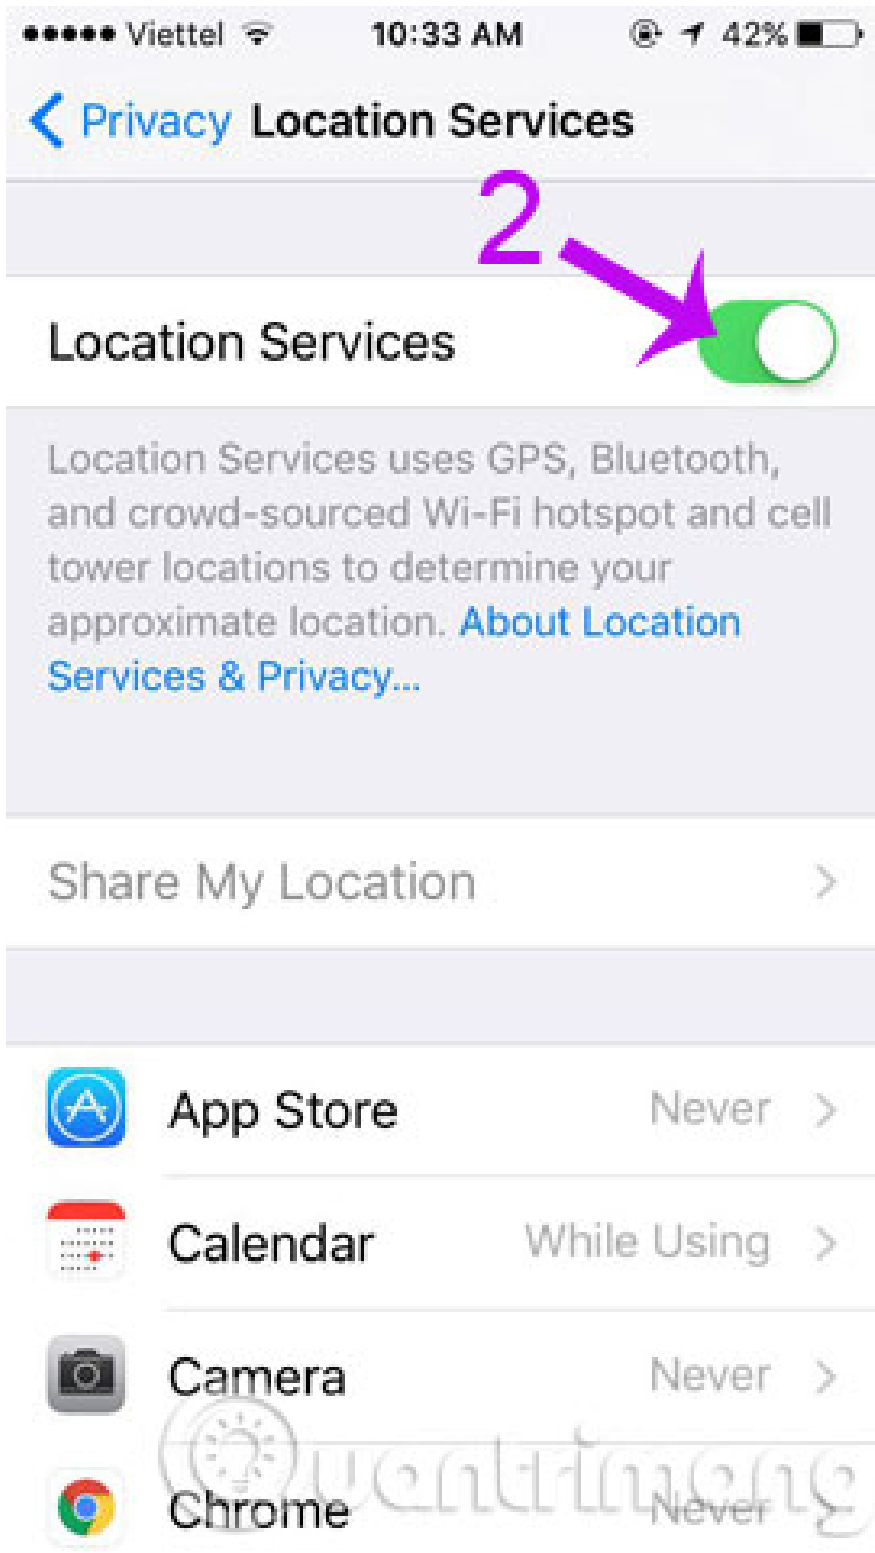

Microphone >

Camera >

Health >

HomeKit >

Step 3: If you want to turn on the positioning of each individual application, click on that application, choose While Using the App
