

Instructions to upgrade to WatchOS 9 for Apple Watch

After testing WatchOS 9 since June, Apple has now released an official new update, along with iOS 16.

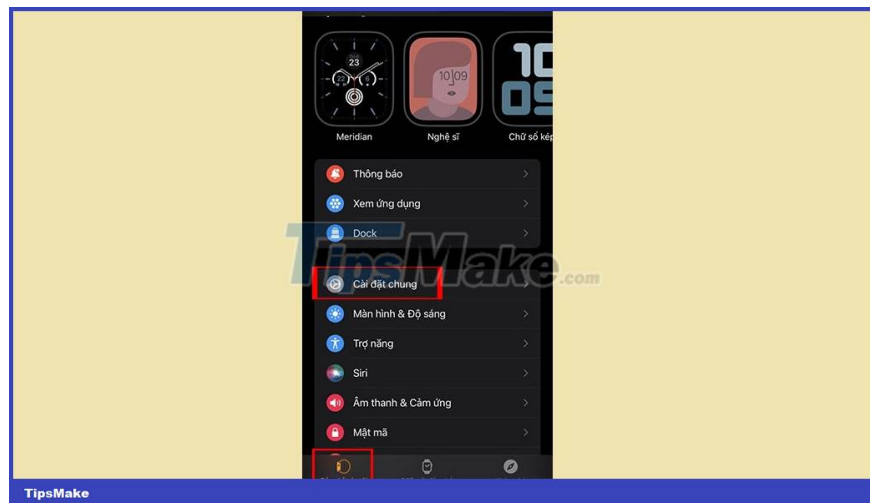

WatchOS 9 is the most significant update to the Apple Watch's fitness tracking features in years. In addition, it will have a Low Power Mode, which helps to extend the battery life of the Apple Watch most effectively.

If everyone owns an Apple Watch Series 4 or later, continue reading this article to learn how to download and install the latest WatchOS 9 for your smartwatch, helping users enjoy new and useful features. most useful.

Instructions to upgrade Apple Watch with iPhone

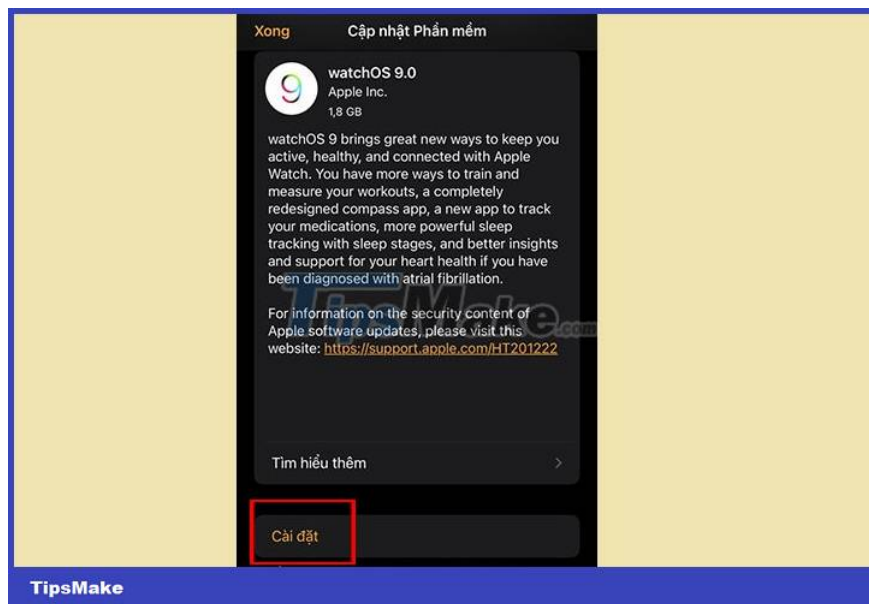

If you need to install updates manually, you can do it from your paired iPhone. The device will automatically reboot when the process is complete.

Step 1: Open the Watch app on the paired iPhone, tap the My Watch tab, and select General.

Step 2: Click on Software Update.

Step 3: If an update is available, scroll down and tap Install. Enter the passcode if asked.

To complete the update, users need to make sure their Apple Watch is on the charger, has at least 50% battery, and is within range of a Wi-Fi connected iPhone. Note, once the installation starts, the user does not reboot or remove from the charger until it is complete.

Instructions to upgrade WatchOS 9 with Apple Watch

Users can also update their watch without having a paired iPhone on hand. All you have to do is connect your Apple Watch to Wi-Fi, put it on the charger, and follow the steps below. Let the device charge while the update is complete. It will restart itself when finished.

Step 1: Open Settings on Apple Watch.

Step 2: Tap General, then select Software Update. The device will automatically scan for available updates.
