

Intel announced the Centrino® Pro mobile processor chip

On April 5, Intel announced a new microprocessor brand called Intel® Centrino® Pro. This new technology addresses the most difficult problems we face - security threats, cost of ownership, resource allocation and management.

On April 5, Intel announced a new microprocessor brand called Intel® Centrino® Pro. This new technology addresses the most difficult problems that we face - security threats, cost of ownership, resource allocation and asset management.

With Intel Centrino Pro processor technology, IT managers will be able to manage and protect their laptops via Wi-fi wireless networking. In addition, IT administrators can manage both desktop and laptop computers that use wired network connections, regardless of whether or not the power status is turned on or off or the status of how is the computer

Mr. Mooly Eden, Vice President of Intel's Mobile Products Group, said: " *This is an ideal time for this product because we are continuing to see an increase in the percentage of computer applications. portable in business* ".

Intel Centrino Pro processor technology will be available widely in the second quarter of this year in the plan to introduce the next generation Centrino processor technology code-named 'Santa Rosa'.
