

Intel unveiled the next Surface Book with the 8th generation processor

In a video introducing a new generation 8 processor, Intel also showed a device like a mysterious Black Book.

In a video introducing a new generation 8 processor, Intel also showed a device like a mysterious Black Book.

It is more likely that this is a popular PC marketing image to illustrate potential chassis design. Although Microsoft has no plans to launch this device in the partner's video, it is not difficult to guess that is the idea of ?? a black Surface Book.

">

Microsoft Surface models have never been black since the Surface Pro 2 was born many years ago. However, it seems that this mysterious color is revitalizing the technology with users with many devices such as iPhone 7 and Galaxy S8 with black frame.

There are also rumors that Microsoft will launch a new Surface Book around October this year and Intel's Ice Lake will be the perfect chip to create the most powerful Surface series. With 4K screen support and improved battery life, this will be an opportunity for Microsoft to show its trust in users in this new line of devices.

1. Surface laptop hardware testing tool is now available in Windows Store
2. Instructions for installing driver for Intel graphics card on Surface Book
