

Internet Cafe Simulator 2: How to mine and buy bitcoin

Internet Cafe Simulator 2: How to mine and buy bitcoins, Instructions on how to mine and buy bitcoins in Internet Cafe Simulator 2, help players collect

Players will spend a lot of time waiting in Internet Cafe Simulator 2, especially in the early parts of the game. Thankfully, the game has added a few extra activities to help keep everyone with work to do.

Gamers can now trade in cryptocurrencies if they want and earn even more, or lose it all.

In this article, let's learn how to mine and buy bitcoin in Internet Cafe Simulator 2.

How to mine bitcoins in Internet Cafe Simulator 2

The interesting point of this game is that if people don't want to buy it, they can mine bitcoins themselves. The process is a bit more complicated than buying and selling, so follow the guide below if you really want to get into the world of crypto trading.

First, the player needs to pay a fee to the Beggar, stumbling around town like a drunken fool. He will have a yellow icon on his head, indicating that the beggar has a quest for the gamer. The first time we talked, he asked for \$100. Give the money and now the player will have access to the bitcoin mining app.

Also, the next day, the beggar will ask everyone to hit a guy wearing a Family shirt. If you do that, the beggar will give the player \$200.

However, do not be happy to spend that money because the beggar will claim it back the next day. If you give him that \$200, people won't have to deal with the game's power down, making the rest of the process go smoother.

Now, to download the bitcoin mining app, the player needs to go to the computer in his cafe, then go to the WWW section.

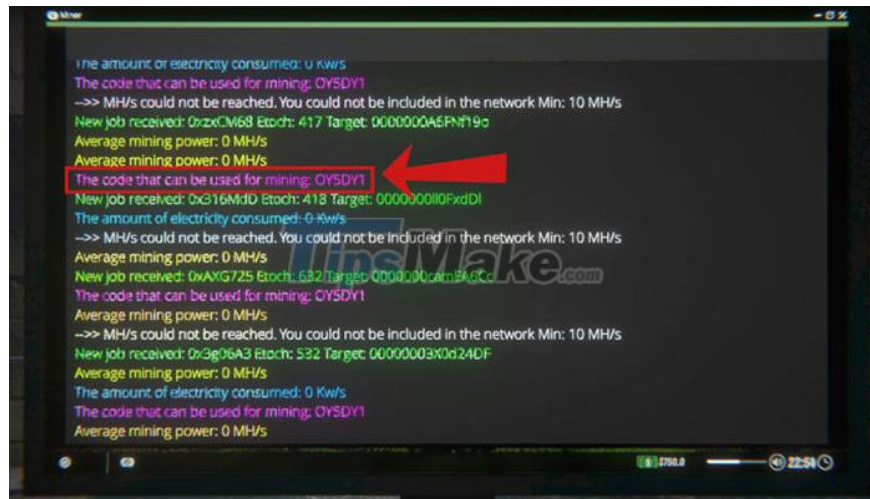

Tap Apps to download more apps. Search for Miner, click it to install. After installation, the Miner application will appear on the computer screen.

Open it up and the player will see a sequence of code that just repeats. There is an important line here, which says 'The code that can be used for mining: _____'.

In the illustration below, the code that can be used for mining is OY5DY1. The actual code this code is random, so it's important to write it down to use it later.

Now everyone needs bitcoin mining equipment. Locate BTC Miner as this will be the place to buy all the necessary tools.

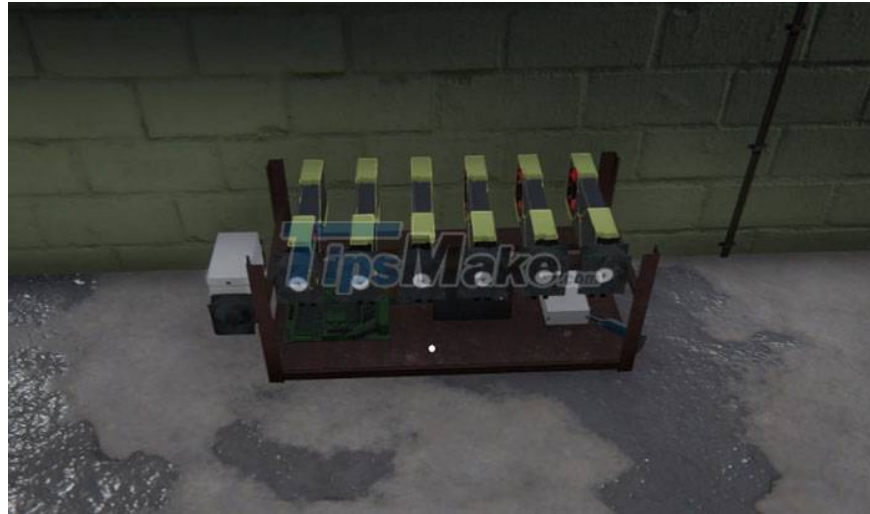

The first thing a player needs is a mining rig, which costs \$675. On top of that, players will need at least one graphics card to start their mining operations.

Each graphics card is worth \$500 and it is possible to install a number into a single mining rig. The more graphics cards one has in a rig, the faster it will mine.

If you want to save for trips to many places, players can buy backpacks at the Second Hand Store, then press I to open the inventory and equipment.

This will allow gamers to store multiple items on them that would otherwise have to buy them one at a time, then walk to the cafe and back.

There is also a bitcoin mining device that costs \$999, but there's really no need for it. For larger rigs, players can fit 6 graphics cards in a single device and own multiple rigs.

Once you have your rig, place it on the floor by left clicking while it's in your hand. Put a graphics card in your hand, then select the device and press F to install the card. Once done, everyone is ready to mine bitcoins. Press F on the rig again to open the interface.

Now, everyone will need to enter the code mentioned above in the Miner Code window. Next, enable the mining application on the computer.

Bitcoin mining is a good way to make money in the early stages, than running an internet coffee shop. The benefit is that the player can close the shop so no one will come in to steal things or use the service without paying.

In addition, closing the door also protects people from destructive bombers. Bitcoin mining rigs are also less likely to catch on fire than a low-end PC.

On the other hand, Bitcoin mining will cost electricity and the basic setup is quite expensive. However, the biggest drawback is not being able to unlock the Entrepreneurial Soul.

This is what will be used to buy skills in his skill tree, so the player will definitely still need to open the shop in the end.
