

# Introducing G Cloud - cloud storage application for Android

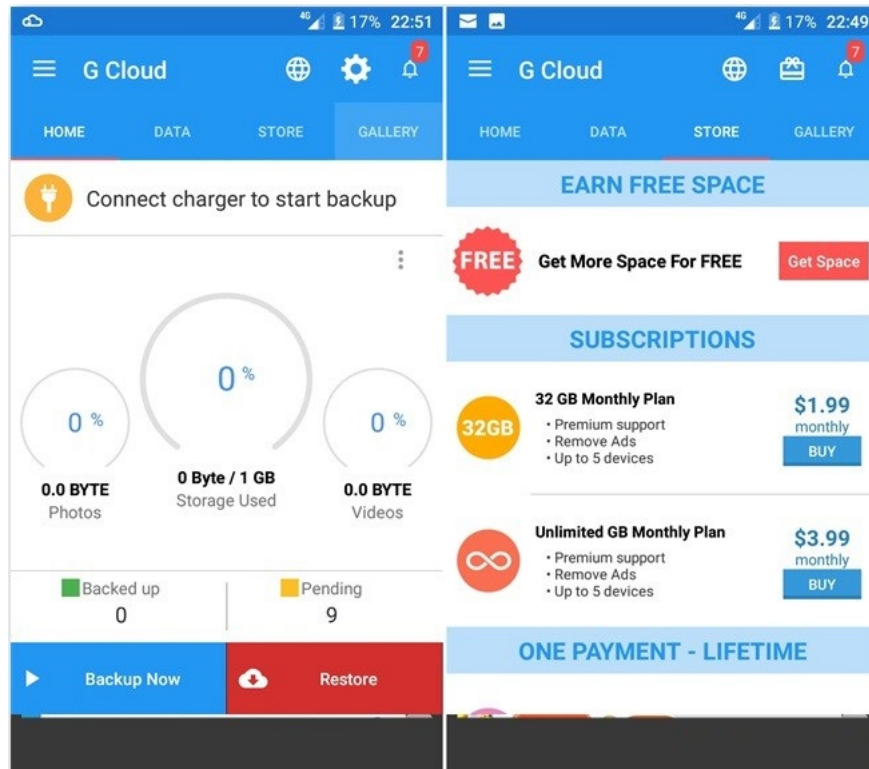

G Cloud is an Android application designed by Genie9 Corporation - an expert in backup solutions. The application will automatically download everything from your phone to cloud storage.

G Cloud is an Android application designed by Genie9 Corporation - an expert in backup solutions. The application will automatically download everything from your phone to cloud storage. Your data will be safe whether the power is lost or damaged. You are provided with 1 GB for free and if you want more storage space, you can upgrade your account with a fairly affordable fee. In addition, you can also introduce and share G Cloud application with friends to receive free upgrades.

After installing the application and creating a free G Cloud account, you will have to select the files to be backed up. You can choose to back up contacts, call logs, messages, photos, videos, WhatsApp data (if you are using it), music files, documents, calendar and system settings.

By default, the application prioritizes using Wifi to back up data and avoid using mobile network data. The application will also prompt you to connect the charger if the battery drops below a certain level. This prevents you from running out of battery when outdoors or there is no way to charge the battery.

G Cloud allows you to use an account on all devices. The application will back up the data of these devices in individual folders on the cloud memory. You can restore data from one of the devices to Android phones via the application. In addition, you can access backup data from web browsers and save them to any device.
