

# Invite to admire iPhone 12 Flip beautiful screen flawless

ConceptsiPhone recently created a build of a 12-fold iPhone called the iPhone 12 Flip, designed based on inspiration from Samsung's Galaxy Z Flip.

Folding screen smartphones are considered a new trend of the mobile market. Currently, a number of major mobile companies such as Samsung, Huawei, Motorola have launched their first foldable smartphones. Meanwhile, Apple has not shown any signs that it will soon design a foldable iPhone.

However, recently ConceptsiPhone has created a construction of iPhone 12 folding screen called iPhone 12 Flip, designed based on inspiration from Samsung's Galaxy Z Flip. The machine has a design that folds the screen horizontally. An extra large monitor is equipped on the outside to display incoming notifications as well as control functions.

iPhone 12 Flip has a super-edge screen thanks to its 'hole-punch' camera.

This foldable iPhone is equipped with a triple rear camera cluster with a large lens, accompanied by a LiDAR sensor to help erase the fonts more accurately, focus faster in low light. The sensor also supports augmented reality (AR) features on the device and allows the creation of 3D models of objects around the device.

This beautiful foldable iPhone is only at the idea level but it also shows users' desire for a new look for the iPhone.

Invite you to admire the impressive concept of the iPhone 12 Flip beautiful foldless screen in the video below.
