

Invite to listen to Rock music created by artificial intelligence (AI)

Dadabots is an AI, capable of composing many songs with metal sounds to celebrate the difference of rock genres.

Dadabots is an AI created by CJ Carr and Zack Zukowski, two musicians with a passion for technology, from software deep learning. Dadabots has the ability to compose a lot of songs with metal sounds to celebrate the difference of rock genres.

Over the past month, Dadabots has been writing constantly and constantly playing death metal music on his YouTube channel. What a normal band can hardly do.

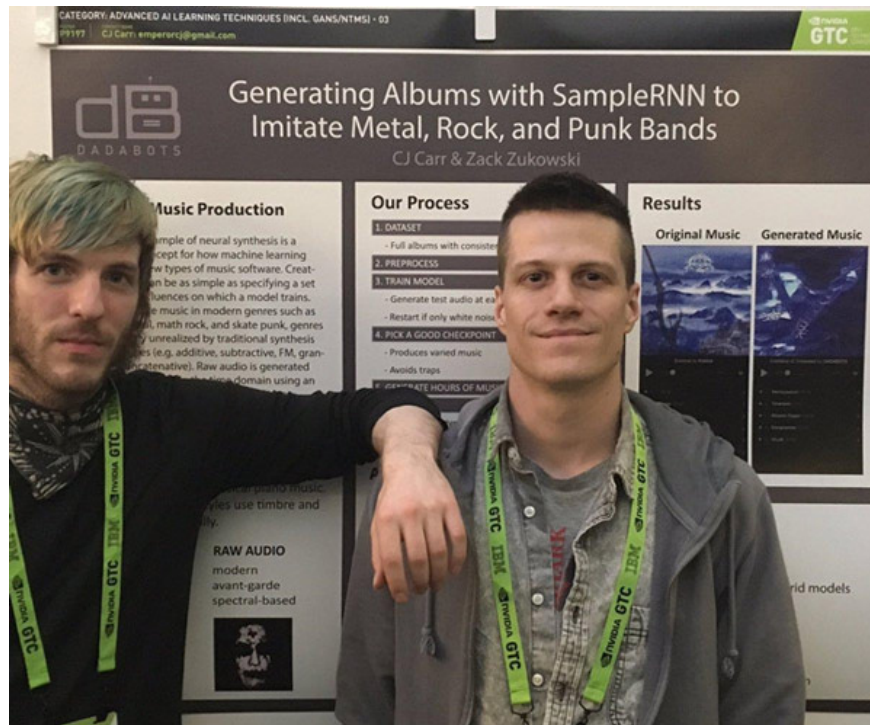

The two musicians have relied on a form of computing architecture built to learn the characteristics of the data entered, the neural network to develop Dadabots. Based on the data entered in this case are death metal music, AI predicts the elements as well as the popular music sequence to create completely new tracks.

Dadabots' documentation of operating procedures and the future direction are posted on arXiv hosting site from 2017. Photo: Dadabots.

Initially, Carr and Zukowski let the AI listen to the music clips every few seconds to learn the identities. After that, the AI can create music tracks including riffs (the music part of the typical rhythm of a song) and some transitions.

Two Dadabots founders said that AI's works have their own aesthetic value.

Although the vocals in the songs are completely unlike human and distorted but the notes are kept in the right pitch, some guitar riffs are extremely fast, so few people can hear them.

Besides publishing music on YouTube, Dadabots has also released 10 different albums with various genres such as rock, Aepoch, Battles and Meshuggah.

Carr and Zukowski said they hoped to 'get rid of black metal music from human life'. Black metal is a branch of rock music, dark dark lyrics that mainly convey thoughts of hatred for humanity and against Christianity.

For each project, AI Dadabots will analyze the work of 'one artist only', and thereby create their own music. Songs currently being produced by Dadabots livestream on YouTube are based on dead metal band named Archspire, in Vancouver.

Below is a rock track entitled Bot Prownies composed by AI Dadabots in the album of the same name. Dadabots wrote this song after listening to 36 times the works of NOFX. The lyrics have been revised by this AI owner. We invite you to listen to the rock version for the composition of AI.

CJ Carr said that in this project Dadabots could create much more balanced music. They hope in the future this AI will receive interactions from the audience. Currently, Dadabots continues to live music 24/7 on YouTube.
