

# iOS 11.1 was released with a series of new emoji and fixes for the KRACK vulnerability

Apple has just released iOS 11.1 and macOS High Sierra 10.13.1 with many fixes, more than 70 new emoji icons and many security updates. Released on the same day are new updates for tvOS, watchOS, Safari, iTunes, and iCloud.

Apple has just released iOS 11.1 and macOS High Sierra 10.13.1 with many fixes, more than 70 new emoji icons and many security updates. Released on the same day are new updates for tvOS, watchOS, Safari, iTunes, and iCloud.

This security update of Apple is the fix for the WPA2 KRACK vulnerability that was discovered in mid-October. Besides, this iOS 11.1 update will apply to devices from iPhone 5S and above, iPad Air and above and 6th generation iPod touch.

1. iPhone X cannot distinguish two twins
2. Next year's iPhone will not have TrueDepth on the rear camera

## Changes in iOS 11.1

### emoji

1. More than 70 new emoji characters including foods, animals, mythical creatures, clothes, smileys, .

## Image

1. Solve the problem that makes the image blurry.
2. Fix the problem of slowing down the Live image effect.
3. Troubleshoot problems that prevent images from showing up in the People album when recovering from an iCloud backup.
4. Solve the problem that affects performance when swiping between screenshots.

## Accessibility

1. Supports braille for class 2 input.
2. Upgrade VoiceOver's access to multi-page PDF files.
3. Improve VoiceOver feedback activity when removing an application from App Switcher.
4. Fixed a bug with some users whose replacement keys were not displayed when using VoiceOver with Touch Typing.
5. Troubleshoot problems that prevent VoiceOver from deleting messages.

## Other improvements and bug fixes

1. Troubleshoot the problem that causes the deleted Mail message to reappear on the lock screen.
2. Troubleshoot problems in enterprise environments that prevent data from moving between managed applications.
3. Solving the problem with some third-party GPS applications causes inaccuracy in location data.
4. Fix the issue of setting Heart Rate notifications that appear in the Apple Watch app (first generation).
5. Troubleshooting that application icons do not appear in notifications on the Apple Watch.
