

iOS 14.5 is experimenting, learning new features on iOS 14.5

Scheduled to be released in April-May, iOS 14.5 update brings many interesting features for iPhone users.

Unlock iPhone while wearing a mask.

On iOS 14.5, Apple added the option to use the Apple Watch to unlock the iPhone when the user wears a mask. To use this feature, the Apple Watch needs to be unlocked and have the option to detect wrist movements. When iPhone is unlocked, the watch will vibrate to notify.

Install the default music app.

When you first command Siri to open music, the device will list all music playback applications installed in the device. According to CNET, users only need to choose their favorite app for Siri to play music when requested.

Supports 2 SIM 5G cards.

After updating iOS 14.5, iPhone 12 users can activate 5G simultaneously on both SIMs. Previously, when using dual SIM on iPhone 12, 5G connection will be reduced to 4G.

New game controller support.

iOS 14.5 supports PlayStation 5 and Xbox Series X controllers, allowing users to connect them to iPhone and iPad using Bluetooth to play games. Previously, iOS only supported PlayStation 4 and Xbox One controllers.

iOS 14.5 is still in beta.

Users can sign up to participate in the new version experience by visiting Apple's website [here](#)> selecting Sign Up and then following the instructions. After successful registration, go to Settings> Software Update to update to new version. Photo: 9to5mac.

Before installing the beta, the device needs to be backed up data to avoid error causing information loss. Users should also consider before installing because the device may overheat, drain battery, incompatibility or application conflict.
