

# IOS 14.5 vs iOS 14.4.2 performance comparison: Are more features 'slower'?

iOS 14.5 is considered the biggest iOS 14 update ever. So does it make your iPhone slower?

After 8 versions of beta testing for 3 months, Apple has officially released iOS 14.5 with many major upgrades in features. Specifically, allowing users to unlock FaceID even when you wear a mask (used in conjunction with Apple Watch). Additional about 200 new emojis with many different themes and emojis. Support using 5G for both SIMs, support for AirTag, support for new PlayStation 5 and Xbox Series X gaming controllers .

So with a series of new features above, the performance of iOS 14.5 really decreased compared to iOS 14.4.2, invite you to read and follow the comparison video posted by iAppleBytes.

>

Surprisingly, with a host of new features, iOS 14.5 still delivers impressive performance and operating speeds that are almost equivalent to iOS 14.4.2 for both the old iPhone and the new iPhone.

YouTuber has brought out old devices like iPhone 6s, iPhone SE, iPhone 7/8 / Xr and iPhone 11 respectively. What are you waiting for without quickly updating to the latest Apple version. To download iOS 14.5, please read the same refer to the article below.
