

iOS 18 and a series of new operating systems will be launched by Apple at WWDC 2024

At WWDC 2024, Apple is expected to introduce major updates such as iOS 18, iPadOS 18, tvOS 18, macOS 15, watchOS 11 and the latest version of VisionOS...

Apple has just officially announced the WWDC 2024 event, an annual conference for developers around the world. Accordingly, the event will take place from June 10-14.

Apple said that excellent programmers and students will have the opportunity to attend the event directly at Apple Park headquarters. For other developers, content and sessions can be accessed for free through the app, the Apple Developer website, and Apple's YouTube channel.

At WWDC 2024, Apple is expected to introduce the latest features and software for the operating systems iOS 18, iPadOS 18, tvOS 18, macOS 15, watchOS 11 and the latest version of VisionOS.

The main highlight of WWDC 2024 is expected to be breakthroughs in the field of artificial intelligence (AI), especially general AI, integrated across Apple's device ecosystem. Currently, Apple is still keeping AI features a secret, but according to technology experts, the conference promises to bring the first information about the ability to integrate AI in iOS 18 and other operating systems such as iPadOS and iPadOS. MacOS.

Susan Prescott, Apple's Vice President of Worldwide Developer Relations, said: 'The main goal of WWDC is to share new ideas and provide our talented team of developers with tools. and breakthrough resources for them to

create even more wonderful things'.

WWDC 2024 is expected to be a groundbreaking event with a focus on creative AI, an area that Apple is focusing on developing to catch up with rivals like Samsung and Intel. The conference will give developers and industry experts insights into Apple's AI strategy and how the technology will be integrated into future products.

Besides software, WWDC 2024 is also expected to reveal hardware breakthroughs. Apple Silicon is expected to have a new upgrade with the powerful M3 Ultra chip, promising to bring outstanding performance to new Mac models.

Previously, WWDC 2023 marked an important milestone with Apple completing the transition to Apple silicon chips. The event saw the launch of Mac Pro equipped with the powerful M2 Ultra chip. Besides, MacBook Air also attracts a lot of attention with its completely new 15-inch version.
