

iPhone 2019 can have 3 rear cameras (triple camera)

According to Economic Daily News, there will be at least one iPhone with a rear camera with 3 cameras (triple cameras) with 12 megapixel lenses in 2019.

According to *Economic Daily News*, there will be at least one iPhone with a rear camera with 3 cameras (triple cameras) with 12 megapixel lenses in 2019.

The camera predicts that the camera will have a 6P lens, zoomed in five times but does not detail the optical, digital or hybrid zoom. The iPhone 8 has a digital zoom 5 times, while the iPhone 8 Plus and iPhone X dual cameras have the ability to zoom twice and digitally 10 times.

If believed to be accurate, Apple would follow in the footsteps of Huawei when they had the P20 Pro system with three rear cameras, including the main 40-megapixel f / 1.8 tube, 20-megapixel f / 1.6 mono tube and tube. 8-megapixel telephoto f / 2.4 with 3 times optical zoom capability.

Build up the structure of triple camera on iPhone X

The following 3 cameras will offer many advantages such as improved low light shooting capability. The new P20 Pro camera system is rated by *The Verge* as 'more than the Galaxy S9 and iPhone X' although it also reminds that depending on personal preferences, the evaluation has more or less changed.

In general, this prediction shows that the 3rd generation iPhone X in 2019 will have better camera, the possibility is 3 times optical zoom.
