

iPhone 8 has a bug that automatically reboots due to production and this is a way to check for Apple to fix it for free

According to information from Apple, in the process of producing a 'very small percentage' iPhone 8 with a screen error is frozen, causing the machine to automatically restart or cannot be turned on. And Apple also made a commitment to fix it for free by changing the logic board for these faulty iPhones.

According to information from Apple, in the process of producing a "very small percentage" iPhone 8 with a screen error is frozen, causing the machine to automatically restart or cannot be turned on. And Apple also made a commitment to fix it for free by changing the logic board for these faulty iPhones.

If you own an iPhone 8 and want to check if your device is affected by this error, users can access the Apple website according to the link below and enter the phone serial code.

According to Apple, this error only appears on iPhone 8, other iPhone models or iPhone 8 Plus are not affected. Faulty iPhone 8 devices are sold in the US, Australia, China, Macau, New Zealand, Hong Kong, India and Japan markets between September 2017 and March 2018.

Apple offers users some options if their iPhone 8 is repaired, including: bringing the device to any Apple retail store, authorized Apple repair center or sending a support letter. .

Note that your iPhone will have to be repaired if unfortunately something is broken (such as a broken screen) before being replaced by logic board by Apple.

Apple is expected to launch three new iPhones on September 12, 2018, and all of them carry iPhone X's overflow design.
