When the device automatically rotates the screen, you will be very frustrated while watching movies or playing games, for example. iFan, please apply the **phone tips** below to fix it.

Why do you get an error when automatically rotating the iPhone screen?

When using iPhone as well as other phone lines on the market today. Users can change the orientation from vertical to horizontal or vice versa for convenience of use. However, there are many people complaining about the error of automatically rotating the iPhone screen. So where does this error come from? Below are some of the most common causes.

1. *The user has enabled the automatic screen rotation feature on the iPhone. It sounds quite absurd, but this is the leading reason why the iPhone screen rotates itself.*
2. *There are many problems stemming from software errors on the iPhone. And of course, the error of automatically rotating the iPhone screen is no exception.*
3. *A lot of errors can occur when the iPhone is not updated with the operating system. And this may also be the main reason why your iPhone rotates its screen abnormally.*
4. *Finally, the most unexpected reason is that your iPhone is broken. Normally, the iPhone's self-rotating screen is caused by a broken screen rotation sensor. This usually happens after the iPhone is impacted or soaked in water.*

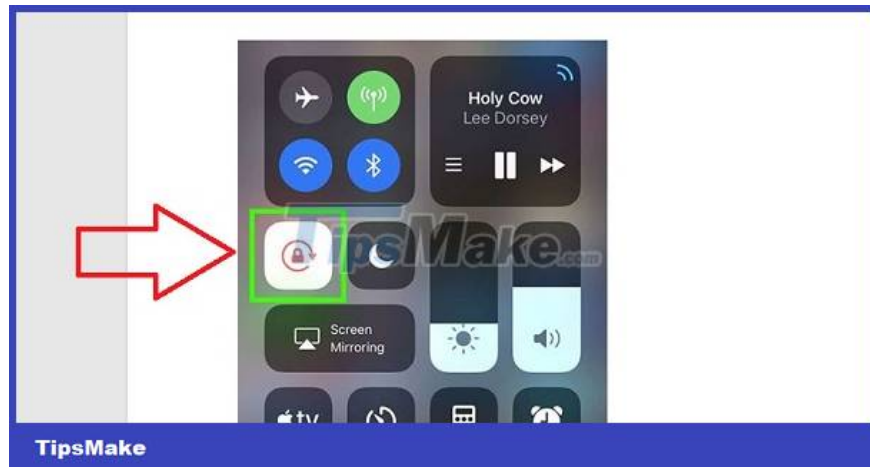

So how to fix the screen rotation problem on iPhone?

Based on the reasons mentioned above. We will find appropriate methods to handle the problem of iPhone automatically rotating the screen. Here are the most common things you can try when you encounter this uncomfortable condition.

1: Deactivate the automatic screen rotation feature on iPhone

Currently, iPhone users can quickly turn off screen rotation using control center. Depending on each phone line and different iOS versions, we will have different ways to turn it off. Once you have opened the control center

panel on your iPhone, just click on the lock icon surrounded by an arrow. When this icon lights up, it means the iPhone has turned off the automatic screen rotation feature.

2: Fix software errors on iPhone

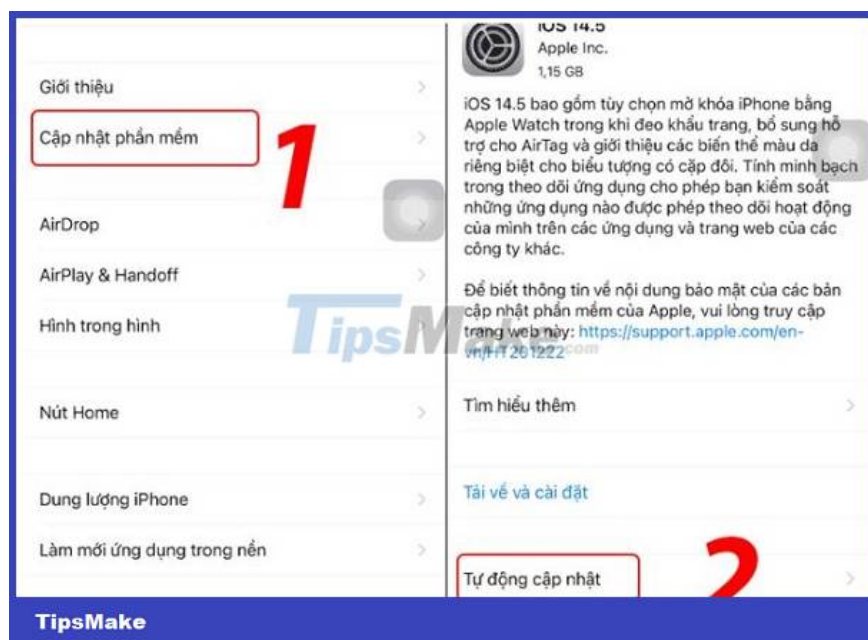

Usually to fix minor software errors on iPhone. The most effective solution is to turn off and restart the phone. This seemingly simple operation is extremely useful to fix errors such as automatically rotating the screen.

You can also try resetting settings on your iPhone by going to the **settings** app . Then click on **general settings** and click **reset** . Finally click **reset all settings** . This will return your phone's settings to their original state without losing data.

3: Update the operating system

Updating the operating system is also a solution you should try when your iPhone has an error of automatically rotating the screen. To do this, you just need to access the settings on your iPhone, then select general settings. Next click on software update. Here, you can choose to automatically update or download and install depending on your needs.

4: Fix screen rotation sensor error on iPhone

The final solution is to check and fix the screen rotation sensor error on the iPhone. With this method, we can only rely on the intervention of a professional technician. Do not try it yourself at home because it may cause more serious damage to your iPhone.
