

iPhone SE 4 is coming soon: Revealing 3 amazing secrets you may not know

The next generation of iPhone SE is about to launch and below is the 'hot' information that fans are looking forward to.

Surely "iFans" are eagerly awaiting the arrival of the iPhone SE 4, Apple's latest low-cost iPhone model. But do you know all the interesting secrets surrounding this phone?

Apple is about to launch the new iPhone SE after many years.

Accordingly, besides the widely published information such as iPhone 14-like design, USB-C port or powerful A18 chip, there are still other notable rumors about the iPhone SE 4 model that you may not have heard of.

1. "Transformation" with a new name?

Some sources say that Apple may "kill" the name iPhone SE and replace it with a new name: iPhone 16E. This move is said to be to create synchronization with current iPhone lines and is also an excuse for Apple to increase product prices.

2. 48MP "monster" camera?

9to5Mac exclusively revealed that the iPhone SE 4 will be equipped with a 48MP main camera, similar to the iPhone 15 and 15 Plus. This means that photo quality will be significantly improved and users will experience 2x optical zoom.

3. Using a "home grown" modem?

After many years of incubation, Apple is finally ready to launch the "made by Apple" modem on the iPhone SE 4. This is considered an important step, helping Apple reduce its dependence on Qualcomm and move towards complete autonomy in component production.

With promising changes, iPhone SE 4 will certainly be a new name that attracts attention in the smartphone market.
