

# Is Apple's EarPods really that bad?

If you can't find your best headset, you may need to switch to Apple's temporary EarPods to listen to music. In this article, TipsMake.com will discuss with you what the pros and cons of this Apple headset.

If you can't find your best headset, you may need to switch to Apple's temporary EarPods to listen to music. In this article, **TipsMake.com** will discuss with you what the pros and cons of this Apple headset.

## Overview of Apple's EarPods

Probably the best aspect of Apple EarPods is that it comes free with any iPhone or iPod you buy.

In 2012, Apple modified the headset design, making them more comfortable and comfortable. Since removing the headphone jack from the iPhone, Apple has also released a Lightning-connected version of EarPods. EarPods were previously housed in a hard case to keep them safe, now replaced by a disposable cover. EarPods are also equipped with a remote control to adjust the volume, make phone calls, Siri, etc.

EarPods comes free with any iPhone or iPod you buy

EarPods are warranted according to Apple's standard warranty. If there is any problem from the manufacturer, Apple will exchange EarPods for free for you.

## Sound quality of EarPods

If you've been using EarPods for a while, you might be surprised to find that the sound quality on them is much better than before. Old Apple headphones have a pretty terrible sound quality. But Apple changed the drivers in the redesign in 2012, bringing major improvements. The overall tone compared to the old EarPods is also really

remarkable.

The sound quality on EarPods is much better than before

Unfortunately, EarPods do not use any passive soundproofing features. There are no silicon ear tips to hold the bud in the ear, as with the AirPods Pro.

Sound from EarPods is also leaking out. Anyone nearby will hear the noise coming from the EarPods when you listen to music. Therefore, they are not ideal when in the library and other quiet environments.

Despite such design flaws, EarPods still maintain their style when listening to many different genres of music.

## **Design and convenience of EarPods**

Apple designed the EarPods to be uncomfortable in the ear but not uncomfortable. However, if you've ever used soundproof silicon headsets, you'll find they tend to lack the fit you like.

The appearance of the new EarPods is also much improved compared to the previous design

Like the sound quality, the appearance of these new EarPods is also much improved from the previous design.

A problem with the design is that EarPods are slippery and twisted in the ear, negatively affecting sound quality. They also often fall off when you move too much.

EarPods are especially bad at running, cycling and doing other vigorous activities.

## Durability and quality of EarPods

Old Apple headphones are known to be of poor quality. They are quite fragile and the materials are used uncertain. The cable connection points to the headset are also very loose. To minimize damage, properly store as in a third-party container.

EarPods are quite fragile

If your EarPods are broken, Apple will guarantee them under the same AppleCare warranty as everything else. But the warranty applies only to manufacturer's faults, not accidental damage.

## Are EarPods worth it?

If it's free, EarPods aren't bad. But if you think about the \$ 29 you need to buy a new pair of headphones, there are better alternatives.

Look for some cheap headphones that use silicone tips for better soundproofing. Just make sure you can use them with your iPhone if you have a new model, without a headphone jack.

If you want to spend a little extra on high quality headphones, check out the list of best headphones available. They cost more than EarPods, but you get better sound quality.
