

## Is iOS 16.5 error causing Lightning accessory to lose connection serious or not?

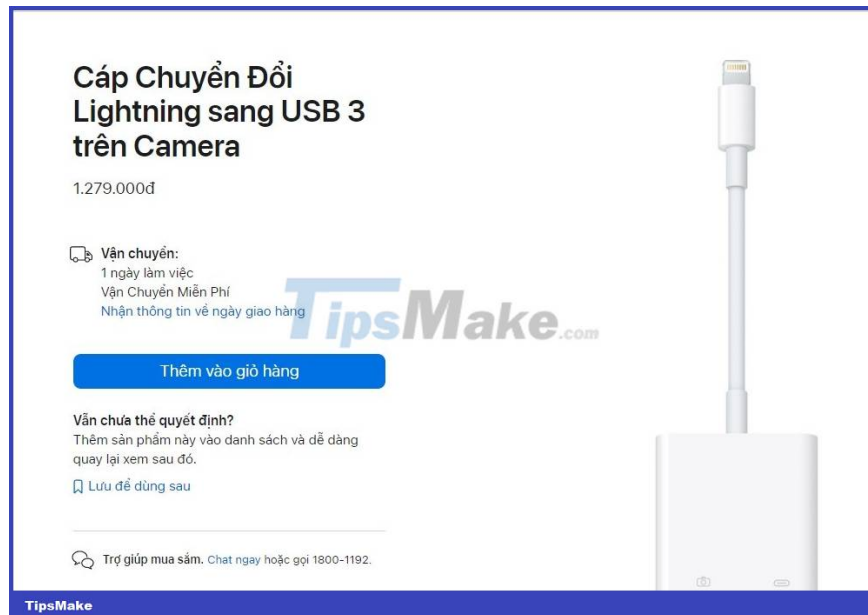

The iOS 16.5 error that causes the Lightning accessory to lose connection with the device has been the focus of discussion in the technology world in the past 24 hours, but iPhone and iPad users are not necessarily concerned about this error.

In the few days since iOS 16.5 was released, a part of users have reflected on the Apple support page, Reddit and MacRumors about connecting the adapter from Apple's traditional Lightning port to the USB port. This is a type of adapter that helps users connect USB accessories to iPhone.

MacRumors," *This issue may be caused by a software bug that should be fixed in a future version of iOS but the underlying cause is unknown. Apple sent it out to the developers today, but an update is available. may be weeks away from release, so iOS 16.5.1 update may be required if the company wants to fix the bug sooner" .*

Immediately after the information about this Apple accessory error, many users expressed concern with iOS 16.5 and did not want to update this version of the application. However, the fact is that this error is not serious.

This error occurs with an accessory called "Lightning to USB 3 Camera Cable". This type of accessory is mainly used to connect iPhone to the camera memory card, or directly to the camera to get data. Users of this error often work in the field of photography. So, if you don't use the above accessories, just upgrade to iOS 16.5 to enjoy the features and enhance the security of your device.

On the forums sharing information about iOS, a lot of users rate iOS 16.5 to use the device cool and not have the same battery drain as previous versions.

iOS 16.5 is a big update, but with some announced features like an additional Sports Tab in Apple News, an additional set of wallpapers honoring the month of the LGBTQ+ community, and a bunch of minor bugs in the apps. Although the new features are quite small, but you should upgrade to the new iOS 16.5 because this update has filled 39 serious security holes and 3 of these have been exploited by hackers.

To update iOS 16.5 and iPadOS 16.5, users can access as follows: **Select Settings > General > Software (Settings > General > Software Update)** . The software will automatically download and install in a few minutes. You need to plug in your phone charger or have a full battery to update smoothly.
