

# Is it safe to disable Android System Intelligence?

Android System Intelligence is an Android system component that powers a variety of smart features you use on your phone, many of which are for personalized services.

Disabling some Android services can be a bit difficult. It's annoying when you don't know what will happen after pressing the Off button.

But what about Android System Intelligence? Can you disable it? And what exactly is that? Let's find the answer through the following article!

## What is Android System Intelligence?

Android System Intelligence is an Android system component that powers a variety of smart features you use on your phone, many of which are for personalized services. It runs on the device and has no network access, so is always private.

Some of the features that Android System Intelligence supports include:

1. Live subtitles
2. Smart search
3. Direct translation
4. Respond to contextual notifications

Available features vary depending on the device. Of course, turning off Android System Intelligence means that most, if not all, of these features will stop working.

## How to disable Android System Intelligence

Android System Intelligence is not an application but a service running in the background. So it cannot be uninstalled. However, you can turn off Android System Intelligence.

Here is the best way to turn off Android System Intelligence:

1. Go to **Settings** and tap **Apps**.
2. Open **See all apps** .
3. Select **Android System Intelligence** .
4. Press **Force stop** and then select **Disable**.

5. Restart your Android device.

**Note :** When you click **Force stop** , the service may not stop running. This can happen but clicking **Disable** will have an effect.

## Is it safe to disable Android System Intelligence?

So what happens if you turn off Android System Intelligence? Luckily, not too much has changed. The first thing Android System Intelligence does is disable most of the features it supports. Features like Smart Search and Live Translate will stop working. In many cases, other supported features such as the Android clipboard continue to function normally.

However, you may also notice a few glitches while using your Android device. This may include performance and stability issues. In some cases, other apps such as the camera may not work properly. In general, turning off Android System Intelligence is quite safe, and you can turn it back on if you have problems.

Android System Intelligence supports various features on Android devices. However, many users may not need those features, so disabling this service will not cause any inconvenience to them.

While turning off Android System Intelligence may not improve battery life, privacy, or performance, turning off other services may. In fact, there are many Google services that drain your battery and create privacy issues that you might consider turning off completely.
